The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists
==========

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserve.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to:
majordomo@piobaire.mines.uidaho.edu and only write:
subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see
http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

Anyone know how the Kenpro KR-400 rotor is rated for capacity? Light,
medium or heavy?
Someone has offered me a kr-400 and a kr-500 in trade (without control
boxes or manuals) and I need to know what they are (he got them from an
estate and has no info). I understand that the kr-500 is an azimuth rotor.

From what it says there, the ft50r can no longer be modified?

> the mod to expand the receive frequency range from 76 to 999 MHz does
not
>seem to work. I pull the plug, as instructed, but I can not get the
unit
>to work on any but the advertised frequencies.
>
The firmware inside the radio has been changed so that pulling the plug
will not toggle the radio into a European mode. This change was made in
radios with the 3rd and 4th digits of the serial number greater the 05.

Or does it just require a different mod? I am looking to buy an FT50R, but
one of the big attractions is its "modifiability" for wide bad rcv and
xmit.

Thanks,

Jud

check out http://members.aol.com/aeimn/ft50/index.htm

all the info you should need on mods for the FT-50.

- The software mod is possible with the old software.
- The full RX / TX hardware mod is done by removing the solder jumper (CAP / MARS mod), a surface mount resistor AND changing the bad from 1 (USA) to 6 or 7 (cant remember which right now) which is FREE band.

good luck,
Tracker

4587. AZDEN CTCSS in VFO mode

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-15 00:00:00 UTC
From: k1sb795@aol.com
Message-ID: <19980315040800.XAA07975@ladder01.news.aol.com>
Source record: 150360

```
N2MODification file for AZDEN PCS-7XXX SERIES
-------------------------------------------------------
-------------

While this is not a bona-fide N2MODification, this may be helpful to those
who desire a CTCSS tone while in VFO mode. This will change the preset value
that was preprogrammed into memory.
This is how you do it :
1) Turn on radio.
2) Press F and then PROG (WR).
3)Press the down key 4 (four) times. The display will show 2 00 TONE and TX
will be lit.
4)Press PROG (WR). TONE and TX will be flashing.
5) Using the up and down keys, enter the CTCSS tone you desire to use during
VFO operation.
6)Press PROG (WR) and turn the radio off and then back on.
You now have the tone you programmed into the radio available during VFO use,
as evidenced by TONE being displayed. If it is not displayed, then press F and
then REV TONE to activate it.

For more info,contact LEW,W2BIE at AZDEN (5160 328-7501
```

I while back Costco sold large (rechargeable) portable battery packs
that has various outputs including 2 12V Cig. lighter outs.

A bit heavy, but great for use w/ an HT that gets full transmit power
when used w/ car adapter. They were also pretty cheap as I recall.

Sadly, I didn't think about it at the time.
My father bought one and I suppose I could borrow it, but I really
wish I bought a few when I had the chance.

(Company was called MVP I think.)

Thanks for the help folks...

I experimented a touch with the mic, and removed the little black disc that covers the mike and it's been working alot better since. I'm not sure if that was the problem or if I inadvertantly fixed a problem while looking at it. Problem solved as of this minute...

But another has surfaced, but with the newsgroup instead....

I cannot find anywhere on my ISP's news server the FIRST message that Dick sent me regarding the mistaken 212 with the 202. Why could that be?

I'd appreciate any input...

Thanks again,

Steve Weaver

And if your're a bit doubtful about the escrow service, you can use
an escrow-escrow (called Escrow^2) service which will hold the money
while the escrow service certifies the merchandise. There is a plan
to form an Escrow^3 service since some scumbag running Escrow^2 ran
off with all the money. More news on this in 2 1/2 weeks :-)

I have for sale an Alinco DJ-580T. This is a dual band ht.
I will include two 72.V 1500 mah batterys made by Perefex<SP>,
the battery charger, and a charger I built to speed up the process
a bit for the bigger battery. This charger is a small ciruit board
which I did not put in a box and requires a 12 volt powersupply.
I am asking $275 obo. I also have a car cigerette adapter and a
comet antenna for it which may be included in the sale.
I will consider trades for other gear or an o'scope.

I have recently purchased an SGC Antenna coupler model 230. I have connected an ALinco multi-band HF whip but have been unable to tune it on any band. I have checked and re-checked the installation for faults but all seems okay!

Any help or views?

Many thanks

Perhaps they should TEACH business economics rather than History or
Physical Education! The problem is, there are what, around 7 or 8
classes a high school student sits through a day, times 4 years, and
other than English and Math (that were taught in Elementary school) what
from High school does anyone ever get to use later in the real world?

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz. |

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150

148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is: |

International Crystal Mfg Co. |
11 N. Lee Ave |
Oklahoma City, OK 73102 |
tel. 405-236-3741, 800-725-1426 |

You need not bother with calculating the crystal | fundamental frequency. Merely supply International with | the exact receiver model number, printed on the rear label, | and the frequency you want to monitor. They will perform | the necessary calculations. |

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Minimum Volume Setting

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	
SM-303	X	X	
SM-304	X	X	

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) / 10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant

max series resistance 40 ohm
max drive 2 mW

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

4614. water injection for internal combustion engines

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-15 00:00:00 UTC
From: Bert Douglas <bertdNOSPAM@dibbs.net>
Message-ID: <6egrpm$j3o$0@198.79.30.78>
Source record: 150387
Cross-posted to: uk.radio.amateur,rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew

I don't know anything about GEET or their
process. In fact, I have never hear the term before.

But, I asked my father about this. He says that
water injection was used in aircraft engines
during World War II to increase effective
power output. He says you can find lots of
old (1930s) articles on water injection
in the Journal of the Society of Automotive Engineers.

Apparently it works by increasing cyclinder
pressures near the bottom of the stroke.

Of course, there is no energy coming from the
water, and the water is not burning, and there
is no violation of the law of conservation of
energy.

In a water injected engine there is less energy
in the exhaust gases, all other things being
equal. The water is merely a means of
extracting a little more useful energy from
combustion gases.

My Dad says further, that water injection
shortens engine life and for ordinary applications
(other than racing or warfare) it is not worth
the trouble. Of course, it is quite possible
that technical advances in the last 50 years
have solved the drawbacks of water
injection.

I like it :-) !!

The future of internet transactions is becoming more clear. After
selling an item for $300, the seller will pay the purchase price plus
50% to cover his end of the fees, and the buyer will end up clearing
about 10 bucks.

But all of the Auction houses and Escrow services will get rich because
nobody trusts anybody else. :-)

Ya' just gotta love the internet ...

>
> Any help or views?

What length is the whip, what frequencies are you trying and what TX
are you using?

Also, is the ATU pulling any DC power and do you hear any relays
clicking inside the ATU as it searches for a match?

One possibility is that your TX is "folding back" to protect iself
and is refusing to generate sufficient power (it takes about 10W)
that the SG-230 needs in order to tune.

If you get no help here, contact SGC directly. They are very helpful
although they also may not know how to pursuade your particular model
or transmitter to drive the ATU when the starting mismatch is bad.

Regards,

AGREED !
However, if the math that is in the new model wasn't in the previous model,
then while the older examples fit the new model, the newer examples may
not fit the old one. In either case, the modelers may no know what questions
to ask the lightspeed computer.

Philoprogentivinisticism may cause the doting mother to ignore her baby's
faults, but the world at large will not do so.

However, the world at large will quite readily throw out the bby with the bath
water.

I looked at the GEET (www.geet.com) page, and I noticed there wasn't any
way to check the "letters of recommendation" until I came to NASA.
I still haven't found an E-mail for NASA, but I got their snailmail address.

I will, if I don't forget, write them and ask if they can find a copy of a
letter written from the source in the page.

Look it up and try it yourself.

Hmmm... Gee David, I not long ago bought a TM-241A from David, had it shipped COD... perhaps he sold it twice?

Also he claimed that the rig was electrically perfect... however, I found out the TM-241A's have a known defect with the ribbon cable from the main board to the display, this little problem raised it's head shortly after I got it... not a big deal to fix.. but his comment was "Gee... I never had any problems with it..."...

He was not very responsive to my queries regarding the display problem, took several e-mails before he denied any knowledge of such a problem...

So.. unless he happened to have two TM-241A's for sale at the same time... I think you got ripped off.

Actually, 706 MK2 has DSP capabilities as an option. You need optional ICOM IC-106 DSP board. When installed inside the radio it will give you auto notch and DSP noise reduction.

From: Pete McGreevy <PMCGREEV@MAIL.IDT.NET>
Message-ID: <350E00C4.3BB5@MAIL.IDT.NET>
Source record: 150154

How will it work on HF, consider the following:

1-AF DSP (definitely)

2-No narrow SSB filter

3-NO Auto Tuner

4-Only IF Shift, NO Width (so no "dual passband" tuning)

5-No Manual Notch (what good is auto noch on CW... none)

6-Icom is currently shipping the 746 to stores across the country.

End of story.

Source record: 150155

Grant,

Ten meters is pretty good some days now, and in the summer should be very usable, but likely only during the daylight hours and probably not every day.

I don't recall the power levels of the radio you mentioned, but even 10 watts can provide excellent contacts, if the band is open. This is especially true of ten meters, as compared to lower bands..

More important is to have an efficient antenna, such as a dipole; a quarter-wave vertical on ten is fairly short, and should work well with a good set of radials. Best operating freqs are likely to be 28.3 to 28.5 MHz (Tech Plus USA hams make that a well tuned segment).

Phil

4633. Re: IC706 - HELP - MOD HIGH POWER (100W OR 50W) IN 144MHZ BAND

Likely not possble.

I believe the 2 meter transmitter is separate from the HF+6m xmtr.

So it is what it is, short of adding an external power amplifier.

George,

Sounds like a 4BTV , close to "457V" in faded appearance. If so, it should be multi-band, not just 20. OTOH, sounds short for a 4BTV.

Best advice is to call Hustler.

Looking in AES catalog, the 4BTV is 10-15-20-40 meter antenna and is a bit over 21 ft high, so that is not what you have.

Should be an SO-239 connector at the bottom.

Hmmmm... I'm wondering if you have only part of an antenna.

Phil

I can't tell you anything about the 2 radios, but I can tell you
that many of the Spammers out there, scan the contents of many
postings looking for valid email addresses.

In the copy of your message, I added spaces to your email address
so that any such program will get the wrong results. To avoid
Email Spam, NEVER post your real address in the header or inside
the message.

Because most Spammers use software to find email addresses, you can
throw off any such program by adding extra stuff to your address.

Thus, myaddress@myISP.net can become:

QRMmyaddress@myISP.net

or

QRMmyaddress@QRMmyISP.net

OR . . . You can break up your address:

. . . write to me at:

trash information myaddress trash information
trash information @ trash information
trash information myISP trash information
trash information . trash information
trash information net trash information

73,
Bob (KF6JHG)
--

If you wish to email me, please remove the letters "cq" from the start
of my email. (I put the letters "cq" so that the automatic email SPAM
programs will get the wrong address.) :-)

I have the following equipment that needs TLC to put it back into
working condition.

B&W 334 Dummy load/wattmeter- same as a Waters 334- three scales
measuring 10-100-1000 watts. Meter is not reading, meter seems to be
ok, some problem between the rf pickup in the dummy load and the
meter.............$35

Icom IC-27 2 meter transceiver, synthesized model....dead $50

VHF Engineering 160 watt 2 mter brick amplifier.....bad relay $50

I would like to get a Motorola type belt clip for an HT holster
that I picked up at a Hamfest this past weekend. IT needs to be able to
hold the standard (I assume it is standard...) type Motorola d shaped
piece on the back of the holster, then it goes into the belt clip and
the radio can swivel <sp> but not come out until turned upside down. I
hope that my description is good enough. Anyone that has these and wants
to sell them or knows where I should go to look for them on the Net,
please let me know either via. E-Mail or post it here. Thanks....

Duuuuuude, like, their logic was, like, flawless and.... Uh.... Heh heh.
Got any triscuits?

Actually I am pretty sure that the water vapor introduced to the mix had
very little to do with cooling the charge. Some sort of heat exchanger
would be needed to get any kind of useful cooling. What the water does in
the "bongload depingifyer" is to prevent _detonation_. The agua will
indeed slow the burn and prevent power-robbing explosions (ping). A
smooth burn is a good burn when pushing a piston.

I am pretty sure that the army used this method during "the big one" to
allow use of less-than-great gas in airplane engines.

Sure is easier for me to get my head around a water injector than a
computer-controlled ingition! (`course now that the auto guys have the
bugs worked out of them they are prolly less trouble than keeping a
little water tank filled!)

> that make sense? Seems that if the humidity is higher gasoline burns
> better. Since I live here in Oregon, low humidity is not a problem.
>

I'm sure there is a point of diminishing returns. Maybe we should ask
someone with a hot-shit ski boat about their experiences! I'll bet a
600hp Big-Block Chevy would inhale a few gallons on the back of a boat.

Unfortunately, I was ripped off by Thomas Zach Bruce, WA4TJS, and an excrow service would not have helped. I sent him $725 for what was described as an "excellent condition" ICOM R71A receiver. He did send it to me (poorly packed), but within 24 hours I sent it back to him as it was in much less than "excelllent condition". He subsequently kept the receiver (which he did acknowledge receipt thereof) AND the money. I have sent him MANY email messages, but lately his email address no longer works (I wonder why).

It is my assessment that if a slime bag wishes to rip you off, you have little practical way to protect yourself. The good news is that 99+% of hams of honest and reputable people.

>worth?
>
>Cannot the market determine this?

Yes and no.

Over a period of time and the sales of a statistically significant number of similar items, a market-driven pattern will emerge whereupon a fair bid/asked range can be established.

For individual items, however, the only way the "market" can determine their value is through an auction or "what am I bid?" offering. It is this latter method that a lot of people don't have the time or patience for.

A variation on these two themes (if you have the time for it), is to start with a fair-but-high asking price and then reduce that asking price 5-10% each week until it sells.

Good luck.

You don't get any energy from the water. The water is used to slow the combustion speed to allow for extra advance in the ignition timing without causing pre-ignition (i.e. knocking) or to kill knocking when lesser quality fuel is used. Water is also used in jet engines to increase the mass of the thrust air after the combustion chamber, mostly limited to take-offs and landings due to the extra weight.

>thanks ... David (VK3DGN)

A word of warning about the transverter output of the IC-735. It is *very*
low level. It won't drive most commercially available transverters without
a booster stage. Of course if you build your own transverter, this is no
problem as you can design it to use the low output from the IC-735.

You can modify a commercial transverter to use the IC-735's output
by adding a booster stage to the transmit side of the transverter (after
the internal transverter IF switching). A MMIC like the MAR-4 will do the
job.

Or you can modify the IC-735 to deliver a higher power signal to the
transverter (5 mW) very simply with no soldering (but there is some
drilling involved). If you want to know how, drop me an email.

Did you remember to set the IC-706 to IC-735 compatibility mode?
The IC-735 used a different command format than later Icom radios.
The IC-706 can be set to understand that format from the initial
start menu. See manual.

4659. FT-847 performance on HF ???

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-16 00:00:00 UTC
From: xhduff@ica.net
Message-ID: <350d8051.0@lightning.ica.net>
Source record: 150215

I wonder how the HF side of the FT-847 will rate compared
to other modern HF rigs ??? ie...will it be comparable to
the FT-900, an FT-840 or ???
The old FT-767 was essentially a 757 with VHF/UHF modules..
not quite a contest rig for HF. I would assume that the 847
is a couple of miles ahead of the 767 just by modern technology
but I wonder where it would fall into the performance of todays rigs.

Also wondering if the DSP is in the IF or AF ?
Anyone have specs on the 847 ?

Comments welcome.

Please DO NOT AUTOreply.

>best. Thanks Mark WA4E
IMO treat yourself to a large coil Texas Bugcatcher, alternatively, if you're handy with a lathe, pillar drill etc, roll your own Bug.
As money is no object, you'd end up with an even better built antenna at a cheaper price.
Yes, the mono-band Bugs do outperform the Screwdrivers, though not by a huge amount, I have both.

Good luck.

Phil G4ZOW/M
PS. When you've got it all together, call ed enry, tell him you want one of his 8 X 2SC2879 amp's to go with the Bug:-)

Its an Alpha 374. Three 8874's and they HONK! 2kw output, in good condition inside and out. Face is perfect case sides are good, paint is rubbed thru on top. But I would repaint it or strip it to brushed aluminum, either way you get a great amp with no tune positions on 80-15 and it does 10 manual tune. Warc bands are easy too. Manual position of 15 does 17 fine. Ditto 10\12. I will ship this amp to you for $1250. Better hurry! Thanks Murray Neece Odessa, Texas Trade possible.....No junk thank you.

I am still owed a Kenwood TM-241A in trade from KB8MCZ, DAVID T GARDYNIK
N 8196 SR 187 SHIOCTON WI 54170 USA KB8MCZ@aol.com

I anyone knows how to contact him their help would be appreciated.

If he is active on 2m packet (I am not) can you advise?
Others are advised to avoid trades with this fellow for now.
(I have our E-mail exchanges as documentation of the problem.)

He has ignored E-mails (his E-mail was not rejected), he has ignored first class mail (mail to the address above, to which he instructed me to ship my half of the deal, was not returned). This is a very sad situation, he has hurt his own reputation and reduced the level of trust within the horsetrading ranks of our hobby another small notch, just for a few bucks worth of gear.

Message-ID: <350DB8E8.4C912982@nowhere.org>
Source record: 150231

Well, in addition to maybe losing the spam with a phony email address in the header, I am wavering between Yaesu FT840 and Icom IC707.
I'm interested in the HF bands and want to use CW as primary communications, but I'm also going to do rtty from the computer and some voice?
The MSRP of either radio is close enough to be equal, so I would like to hear some experiences with these two models.
Anyone want to post some opinions?

Source record: 150235

Hi, Sam, welcome to the family!
I have to qualify Bob's statement, You said you were in the Bay Area,
which is were I am (North Bay) and up here there are a lot of 440 repeaters,
there are also some 2m, but none of them have Autopatch, or any other
special features. Also, 2m is not being used as much, and there are a lot of
440 Rpt's going up.
So, if you can't get dual band capability, I would recommend 440 (UHF).
However, I also would check with (Or join), your local Amateur Radio
club, they would know what was prevalent in your area. You can find
clubs in your area through ARRL (http://www.arrl.org/field/club/clubsearch.phtml).
As to your second question, listen away! There aren't any restrictions on reception
for the ham bands.
73, Ben (KE6GWF)

I am looking for a good used 2 Meter Amplifier. I need one that will take up to 50 watts of Power and produce any where from 150 to 160 watts. I will most of the time want to feed 25 into it and at times as low as 5 watts. Preamp would be ok as well. Also would like to find a good Omni-direction 2 meter / 440 antenna. or even just 2 Meter. Also interested in a good working Rotor to turn an 11 element 2 Meter Cushcraft beam.

I recieved several letters from people thanking me for this post
recently, so I thought I'd post it one more time.
Hey guys and gals I found a really cool site that sells plaques.
They make it using a copy of your FCC license. Very nice plaques
high quality. Check it out a link is on my ham radio page.
or go directly there at
http://www.awards-r-us.com/wireless/products.cfm?siteid=3121
or my page at http://www.flinet.com/~duane/ham/ham.html
They also make other award plaques, so book mark them for later use.

I like mine. Menus are pretty intuitive.

And now it comes with DSP -- or at least a free add-in (i.e., inboard) DSP unit when they become available. April ETA. Older owners (and I am, in both senses) have to pay approx. $150 or so for the DSP unit, still well worth it IMHO.

Check out the icomamerica website for more info.

Phil

If you don't have the hand mike (MC43S, marked as sold) and the power
cord with the 850 then the price is abt $100 too high. Those items came
with the radio and most people expect to get them with a radio.

Just set up my FT8500 to cross band repeat! Works really great while I am out walking around each night. I use the 70 cm band simplex at 50mw from my handheld to my FT8500 base and cross band to one of the local 2 m repeaters! Saves on the HT's battery use and from what my fellow hams report the S/N and modulation are great! I am told they would never know it was cross banded unless I told them!

4692. FS: Drake L-4B Linear Amp & Power Supply

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-16 00:00:00 UTC
From: Tony Lyon <kj5xf@worldnet.att.net>
Message-ID: <6eku8j$jup@bgtnsc03.worldnet.att.net>
Source record: 150248

Greetings,
I currently have the following for sale:

a) Drake L-4b Linear Amp (Mint condition),
and matching Drake Power Supply. I have the manual,
extra bulbs, an antenna relay, and all connecting
cables
b) Pair of brand new Eimac 3-500Z tubes

NOTE: The L-4B has been in storage for ~5 years,
and the Eimac tubes are ~10 years old.

Conditions:

#1) If shipping is required, UPS COD will be used, and buyer will
pay both shipping and packing costs.
#2) I will only accept bank drafts or cash. No checks or
money orders.
#3) I'm asking $1000.00 for the items described above.
I would prefer to sell it locally (i.e. Central Tx
....Austin-Wimberley area), but am willing to ship it
anywhere in the Continental U.S.

If you're interested, please send email to the following
address: jlyon@electrotex.com

Thanks,
Jose Lyon

I went to the www.friend.ly.net/GEET/ net and it does have to be capital
GEET like that, and i read their stuff about the small vac carb with hot
gas and I thought about some experimentation I did many years ago with
Magneto-Hydro-Dynamics and I believe the stuff they are doing may be
from a proven field, and they are using it to break new ground.

Wouldn't that give the naysayers a shot in the butt>?

4698. VC-H1 Kenwood Visual Communicator?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-16 00:00:00 UTC
From: Kent Hufford <khufford@erols.com>
Message-ID: <6ei42frdv1@winter.news.erols.com>
Source record: 150254

First the Paula Jones report this last Friday, now I get my APR 98 QST on Sat. .. almost too much in one weekend.

On the back of the QST is the VC-H1 Visual Communicator. Neat stuff!!! Why had not some one thought about this before. Jee more toys!

Looking at the "ad". It shows TWO people INSIDE a tent in the woods looking at the 1.8inch TFT color display of a guy in the middle of a stream holding up a fish he had just caught... neat.

Looking closer, the TWO people appear to be a man and a woman in the tent. The person holding the VH-H1 has smooth leggs, and long fingernails -a woman? The person holding the TH-G71A has hairy legs, and short fingernails - a man? If this is Europe, never mind.

OK if its a man and a woman laying down in the tent, who is the guy with the fish? Relative of the either?

It might be in the Paula Jones report? Wait a minute, the ad looks like it might be taken at Camp David??

Anyone seen one of these, I mean the VC-H1?

Kent

From: soconnor@mcs.net
Message-ID: <350d9409.20199905@news.mcs.net>
Source record: 150259

Basically, I can't get the software to work. Under windows NT, it
just says it cannot connect to the HT. Under windows 95 when you
press connect, nothing happens, no message.

I am selecting the proper serial port and I have the official kenwood
cable.

Has anyone successfully used the Kenwood software for programming the
TH-G71A. Are there any special settings I need to set on the HT
before this works? The documentation (such as it is) is horrible.

Thanks a lot.

Hi, George, K1RBS. I have had quite a bit of traffic with "Clif", from AVVID, in Irving Texas. The signature he uses says that they are authorized Kenwood and Icom repair facility.
This man has gone the extra mile to help me, even sending me a scan of a layout print so that I could identify parts. I recommend that you consider him. Once you put it in a box, there are five digits in any zipcode, his is just as easy to write as anyone else's, and I have to believe if you are treated as I have been treated, you,too, will be sending people to him. He posts here regularly. It's AVVID, in Irving, Texas.

It's a rather long and involved process, although there are over a hundred "first-come-first-served" allocations already available. The only problem is that they are all in scantly populated areas. You should have a competent consulting engineer who regularly practices before the FCC, as well as a good communications attorney. Here are a few suggestions on where to find them:

http://www.sbe.org/hotlinx.html

http://www.radioinfo.com

http://www.nab.org

http://www.commlaw.com

Lots of others out there as well.

A minimum allocation in the commercial band is for a Class "A", or 6 kW @ 100 meters HAAT. You don't need to run that much power, but you must have enough separation from other existing stations not to cause interference with that amount.

Good luck!
Ron
N6AHA

Didn't know G.E. made the Syntor...thought that came from Motorola..
The model number looks more like a G.E. Delta, and the description
of the Control head fits a Delta radio as well.....

Too bad MOST schools don't have a class like this. One school, and one
class during an entire day, does not change the status of American
Schools in general. Wood shop however is of no use. Nothing is made in
this country anymore, especially out of wood.

I'm using an SG-230 in a permanent installation at home. If my memory is correct, the sensitivity level (min pwr required to start tuning) can be changed by modifying a resistor inside the tuner. This was mentioned in the manual, and I did the mod myself. This might help if your TRX won't provide 10W into a highly mismatched load.

4717. QUESTION: ICOM-706MkII, what's the catch

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-16 00:00:00 UTC
From: tholtom@ozemail.com.au
Message-ID: <350d1147.3383557@news.ozemail.com.au>
Source record: 150273

I'm new to amateur radio and have just read the review of the 706 mkII
in this months issue of QST.

Seems too good to be true!!

What is the price to be paid??

You get as much as a bigger box (excepting DSP, but my PC and
soundblaster will do fine for that)

...for less money!!

OK there's the usability issue: all those menus etc,

.....but what gives....whats's the catch?

Why would I buy a larger box??? AND pay more money?

Sensitivity, Selectivity, IF filtering? Audio?, robustness?, "feel"?
(excepting afore mentioned problem of mobile mike gain)

Thanks,

Tim

4718. THE MOD FOR THE IC706MK2 WORKS!!!!!

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-16 00:00:00 UTC
From: Cfisher@klis.com
Message-ID: <350d093b.1727068@news.klis.com>
Source record: 150274

THIS MODIFCATION WORKS:
I HAVE PERFROMED THIS ON MY IC706MK2

_____
Extended transmit mod for the ICOM 706 MKII

This file may be freely distributed as long as it remains intact, with no
modifications, additions, or deletions.

DISCLAIMER:
I assume no responsibility for damage or inaccuracies contained in this
document. In other words, USE THIS AT YOUR OWN RISK. It worked for me,
however I don't know if it will work for you.

WARNING #1: This mod requires the ability to remove surface mount diodes.
Only those who are qualified to do this should attempt this mod.

WARNING #2: This mod seems to erase all memory channels, etc. You may want
to save this info for reprogramming.

Disassembly:
1. Face the front of the radio towards you.
2. Remove the three screws in a row across the middle of the top of the
radio.
3. Remove the two screws at the top rear (on the sides) of the radio.
4. Pry the top cover off from the back.
5. Disconnect the speaker at the connector.

Modification:
6. Near the top rear of the main circuit board, there is an small, oblong
metal can. Directly below the right side of this can is two surface mount
diodes with a white silk-screened box around them. There is also what
appears to be a circuit board part number just to the left of it (mine says
B4916D). Remove the LEFT diode in the box.
7. To the left of this, there is a test point marked CP3. Just to the left
and above this test point is another box with two *vertically* mounted
surface-mount diodes (Note: there is also a place for 5 more

horizontally
mounted diodes, with 3 installed). Remove the LEFT vertically oriented diode.

Reassembly:
8. Reconnect the speaker.
9. Put the top cover back on. Insert the top cover tabs into the slots and
lower into position.
10. Replace all of the screws.

My radio did not require a reset, however I did lose all of my channel memories. It seems to be able to transmit everywhere except below .5 Mhz. I
have not tested the power output at all frequencies yet.

I hope this helps everyone who have been waiting patiently for this mod.

I spent 5 radio-less years there! They even impounded my FRG7 RX.

Other US Stations there now are 7Z1AB in Riyadh and 7Z2AB in Jeddah, if
you can get to any of these they will most likely let you operate.
best of luck!

Source record: 150276

Hi all

I notice on my IC-735 that there is an output for a Transverter. Does anybody have information about
suitable transverters for use with this radio. Commercial/Kit or project. I'd like to get on 432 & 1296.

thanks ... David (VK3DGN)

OK, I MUST BE MISSING SOMETHING.

why didnt you take the 5 min. to confirm his phone and other info before
you sent the check.??????????
btw. mass has a consumer protection law that provides for jail time if
anyone steals from another party thru the mail. so either this guy is
stupid, or he is in the hospital and cant respond.

Well, to make a small correction...It now comes with FREE DSP!.

There isn't a catch. That's why it is one of the most popular radios ever produced.
Yes, the menuing is a struggle to learn, but after about two weeks of using it you'll be an old hand.

I don't remember all the specs and how it compares to other units. But it doesn't SUFFER from any major deficiencies. QST did a review in the January 1998 issue. You should be sure to read it.

>class during an entire day, does not change the status of American
>Schools in general. Wood shop however is of no use. Nothing is made in
>this country anymore, especially out of wood.

I can tell you've never worked in the construction trade. Wood shop may be one of the few "practical" courses offered in high school which actually teaches the student a marketable skill that won't be obsoleted in a few years. (Others are welding, and to an extent, automotive repair.)

Unfortunately, most of the material covered in "practical" computer and electronics courses will be obsoleted in short order. Anyone still using, for pay, CP/M software? Probably not, and the same will hold for Win 3.1 software in a short time. TTL is also going the way of DTL and RTL, and likely won't be much used in a very few years.

But the techniques of framing a house or constructing kitchen cabinetry haven't changed much at all in the last 100 years, and probably won't in the next 100 years either. Wood is wood, hammers and nails are hammers and nails. Etc. So the woodworker is much more likely to be prepared for a long term trade than someone taking Lute's course.

I don't want to pick on Lute here, but most "practical" electronics training has a very short marketable life. I wonder if Lute teaches SMD rework techniques of soldering. Through hole board assembly is rapidly becoming obsolete, and point to point wiring practically already is. It is much more valuable for a worker to be trained to understand electronics on a functional systems level. What's in the functional blocks changes rapidly, but the blocks themselves are more constant. If one knows their transfer functions, it doesn't matter so much how that function is implemented. They can still understand and troubleshoot the equipment.

Icom IC-25H 2m Mobile:

* 45 / 2 watts output
* 5 memories, 2 VFOs, scanning
* Icom IC-BU1 Battery backup unit for memories
* Icom quick-release mobile mounting bracket
* Original hand mike with DTMF pad
* Original box and manual. Also includes power cable.
* Communications Specialists SS-32A Programmable PL Tone Encoder installed

This is an older 2m mobile rig without a lot of bells and whistles. Has been mobile most of its life so has some wear but is in very good shape. The PL Tone encoder can be changed to any of the standard subaudible tones via dip switch settings.

Just back from the shop (MTS Electronics Repair in Colville, WA) for checkout and replacement of a couple heat-sensitive diodes. Rig works great!

Would make a good starter rig or could be used as a backup or base packet station. I'm more interested in HF these days and am trying to raise funds for a linear amplifier...

$150 shipped in the lower 48.
($140 if you pick it up in Kansas City.)

E-mail if interested or call (816) 246-6476 after 6:00pm Central time.

No, but I have used 735 control from a PC to drive a 706.

Make sure you have set the 706 frequency data option to the right number of digits. The 735 has one less. you may find you can't enter frequencies above 99 MHz. You also have to set the default baud rate correctly. All done from the power on menu in the 706.

Don't forget to set the 706 ID address to that of the 735 either.

I have made transcontinental contacts mobile using a similar radio
(HR2510 Uniden), and made a Japanese contact from the Pacific Coast of
Oregon last year while on vacation. Conditions have GOT to be better
this year than last year at the same time!

I have been HEARING a lot of South America recently....

I'm looking for a piece of the old style 6700# rating (approx. 5/16 OD)Philistran cable with the old style potted ends to match with some I presently have. I'm looking for a piece anywhere between 65 and 95 feet in overall length, with both potted ends installed or new and ready to install. If you have something that fits this bill just laying around and wish to sell it, please let me know ASAP. Thanks and 73,

It seems like the Kenwood VC-H1 is a very cool little device. Does anyone know if it will work with other rigs or it's just designed for the TH-G71A?

I also wonder if it can be used as a "See You See Me" camera used during Internet conferencing.

How about if I use it as a digital camer for my family?

Ah! How much is it?

Thanks!

Best 73!

Kustom X band radar unit. Good condition. Does stationary and moving car detection. Haas 1 large antenna/window mount for inside oroutside detecting. Dash unit has one or two small cracks inthe leather case and one segment of 1 eight segment speed digit does not work. However, it is obvious what the speed is. Comes with Tuning fork. $200 + COD from Boston or can arrange pickup.

dg>Can you get it anymore, or is it CFC and not available?
dg>73 Dave WB0GAZ dgf@netcom.com

Could be air. In the '60s we (military) had radar transmitting gear in
metal containers with a bicycle valve. To reduce the chance of sparkover
you just pumped the thing up with air with a bicycle pump. Not during
damp conditions of course!

4758. Kenwood's new SSTV ?!?!

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-17 00:00:00 UTC
From: Richard Amirault <amirault@shell2.tiac.net>
Message-ID: <6emufp$s0@news-central.tiac.net>
Source record: 150064

Today I got my April issue of CQ VHF and on the back cover is a full page advt from Kenwood for a Slow Scan TV unit that attaches to an HT!

Basicly, it seems to be some sort of "digital camera" (in full color) that has the SSTV software in ROM and the cables to attach to your radio and/or computer. You can plug this unit into your HT in place of your speaker/mic and send and receive pictures over the local repeater. (or simplex)

No price announced in the advt.

Hope this is not an "April Fools" joke.

> plug, but at the cylinder walls, because the mixture is so hot, all it needs is
> that extra juice available from the cylinder walls to trigger off >center flame
> fronts early on before the plug EVER fires.

Actually, that's a form of pre-ignition, a different animal/different cause, with the same result as detonation. Detonation stemming from early timing/low octane/too high compression/lean mixture, or a combination thereof, occurs thus: The flame is started by the spark plug and the mixture begins to burn. As it does, the resulting expansion of hot gasses is compressing the remaining mixture in the cylinder, as is the rising piston. Under the right conditions, the unburned mixture auto-ignites and begins a new flame front. The inevitable collision of the two flame fronts produces the characteristic knock of detonation and the attendant equipment damage that results. Pre-ignition can occur in the absence of a spark. Remember the anti-diesel solenoids they used to put on carbs? You know why they were there; right?

<more snip of some accurate info>

> And when you run with less detonation in a engine, that means you can push the
> timing agressively up towards TDC, making more use of the resulting explosion.

No, and yes. We push the timing away from TDC, as in more advance, as in before TDC. And we aren't making use of an explosion, at least not in a gasoline engine. The air/fuel mixture burns (hopefully), as rapidly as we can make it. More advance, to a point and short of detonation, means more of the induced air/fuel mixture is burned, which obviously means more efficiency and more power produced as we approach that magical .5 lb fuel per horsepower per hour figure. The optimum advance figure varies, based on the many characteristics of the engine that determine the _time_ required to achieve complete combustion. Obviously, advancing the ignition timing beyond that optimum point begins to reduce horsepower output, even if detonation isn't occurring. The goal isn't to run with less detonation, it is to run with _no_ detonation. Detonation always reduces power production.

BTW, if it's using explosions it's most likely a diesel-they detonate by design... And yes, I know you knew it was advance, but that's not what you said. Which leads to my final point.

> Get a basic mechanics text book on engine folks, all this has been written and
> rehashed millions of times, literally.

Yes it has.
>
> At first I didn't mind these threads, but it looks like 80% of the participants
> wouldn't know a engine from a electric motor.
>
> Pearce - KF4MOK

If you're gonna crawl in the pulpit, it's a good idea to have all your facts straight. And FWIW, I've been teaching folks for many years now, and I've never found it productive to tell them how stupid they are. There is a profound difference between teaching and tooting.

To those who wonder what this has to do with amateur radio, me too. My apologies if you are offended.

Hopefully, there is no one left reading this thread that still thinks detonation is "valve rattle" :-)

4768. FT-847 Price is $1344 Dollars

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-17 00:00:00 UTC
From: hershman <hershman@ix.netcom.com>
Message-ID: <350F359B.8559B6DE@ix.netcom.com>
Source record: 150074

Well it should be. If you go to several Japanese Ham store Web pages you
will see the
FT-847 list price is 210,000 Yen and the the retail (street price) is
168,000 Yen.
The current exchange rate is 125 Yen to the Dollar. So 168,000 Yen
equals $1344 USA Dollars. THis is Roughly the price of the closeout
FT-900CAT. Hmmmmm.
SO the FT-847 is replacing the FT-900CAT. I will wait till the price is
corrected.
Don't get ripped off by paying $1820 for a radio that is being sold for
$1344 USA dollars
in Japan. OR. You can Order the FT-847 from several Japanese Dealers
and BYPASS
Yaesu USA and the Dealers and save $ 500 !!!

Further, we live in an area that has a multitude of construction (wood)
businesses, Window companies, Commercial cabinet companies, prefab home
builders etc. "Wood Shop" is no longer...making little wooden boxes or
shelves(!) it's construction trade and all of those I've spoken of, it is
highly desirable and necessary.

>KQ4KK

I just saw the ad myself and wanted to see some more info so I went to
kenwood's site and found that it is the biggest load of un-informative
CRAP I have ever seen in my entire life... why are there more links to
games than to radios? The search engine doesnt work either.
The VC-H1 Looks promising if its "reasonably" priced... I wonder if it
can snap & save several pictures like a digital camera, that would be a
definite plus... But they are really taking a chance on a niche market
even in the amateur radio field. I doubt that it will last long at market.
I wonder what the other companies have in store for us at the
hamvention...
Speaking of new technology...Why haven't there been really any "new"
products in recent years in the industry? The big thing has been combining
HF & V/UHF in one rig... but how about making a mobile rig that will do
10m-.23m allmode with reasonable power... I think 2m SSB has a MUCH better

chance of becoming popular than portable SSTV. I mean in the coming solar cycle there will be a REAL possibility of 2m & 1.25m SSB DX contacts...

Anyway, thats just MY rant...

4778. RS HTX-404 PTT question

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-17 00:00:00 UTC
From: Homer <ProjectZero@whodat.svr.com>
Message-ID: <350f5e63.0@news2.ibm.net>
Source record: 150084

To those with HTX-404 HTs--

Is is normal behavior for the 404 to delay the unkey
of the PTT when the transmit tone squelch is on?

The HT is still keyed up for about a second after
I let go of the PTT.

When the PL is off, letting go of the PTT really
does stop the transmit.

I've now noticed my 202 "pauses" on unkey as well
when the PL is on-- but only for a half a sec or
less (I probably never noticed it but seeing the
404 in action made the brain more aware of it).

> Why would I buy a larger box??? AND pay more money?
>
> Sensitivity, Selectivity, IF filtering? Audio?, robustness?, "feel"?
> (excepting afore mentioned problem of mobile mike gain)

Not for sensitivity (all new products are sensitive enough nowadays), but certainly intermodulation caracteristics, because of the size of the "box" (as a rule you can admit that the bigger the box, the better the filtering); audio is not very good also (tiny speaker); and the IF filtering is made at a high frequency (9MHz), so it is not very sharp...

But it is quite normal for a small radio, and it remains a very charming one !!!

>
> Also wondering if the DSP is in the IF or AF ?
> Anyone have specs on the 847 ?
>
> Comments welcome.

I think it will be OK here are some of the specs:

Freq. Range : 110 kHz - 30 MHz
36 - 76 MHz
108 - 174 MHz
420 - 512 MHz

Sensitivity : SSB/CW AM-N FM
0.5-1.8MHz - 20uV -
1.8-28 MHz 0.25uV 1uV -
28-30 MHz 0.25uV 1uV 0.5uV
50-54 MHz 0.20uV 0.5uV 0.25uV
144/440MHz 0.125uV - 0.16uV (probably with pre amp
on)

Selectivity: (-6/-60dB) SSB/CW: 2.2/4.5 kHz
CW-N 0.5/2 kHz with optional filter
installed
AM 9/20 kHz
AM-N 2.2/4.5 kHz
FM 15/30 kHz
FM-N 9/20 kHz
DSP is on AF !
It has very nice features, specially for the Sat Ham.
Can't wait to see a serious test report !

> of communication.

Hi Grant,Welcome to amateur radio. As the current sun spot cycle gets better so will 10 meters. Daytime band openings have seemed on the up-rise. I have noticed a lot more openings in the last several weeks then the previous months. I think that summer months are the best for 10. In addition to normal skip propagation, 10 meters is about the lowest band that can use sporadic-e. However Canada may be too far north to take advantage of sporadic-e openings.

> Could I hope to get overseas QSO's?

When the sunspot cycle is at it's best you can work the world on 5 watts from 10. It will probably peak within the next two years. This cycle seems to be a little slow.

> I see a few Realistic 10m rigs for sale on the swap nets, are the a
> reasonable rig?

I have one that I put in my old pickup truck as a mobile rig. I have no complaints about it as a mobile. For the price it is a good way to get on hf.

Date: 1998-03-17 00:00:00 UTC
From: dgf@netcom.com
Message-ID: <dgfEpz2r4.I14@netcom.com>
Source record: 150125

Planning on buying a travel trailer (the dwelling you tow behind your
car), and would be interested in suggestions for one that might also
make a good portable shack. Tow limit of car is 2K lbs so needs to
be pretty small. Not looking for a pop-up, but rather a fixed structure.
I think the weight limit keeps me to the 15-20 foot range.

Any thoughts? (PS I'm in Colorado if you have just what I want for sale!)

So what? Water injection does this already. Are you saying I should by a expensive GEET fuel processor instead. I want neither. As sensors, fuel vaporization at injector, and software improve machine control systems, 99% of what is now achievable by a troublesome water injection system will be attainable. I'm not going to coninuously add water to my engine's fuel system, nor will I mix special fuels for the GEET. Noticeable decreases in emissions and small increases in performance are not what I would call "ground breaking technology" as its played up in the GEET pages. BTW, I have visited every single page you have posted here, but each one has the tale-tale sign of uninformed writers who are soon to be hit for a buck for absolutely no return.

Granted I may still want a water injection system on a prop plane. No matter how reliable an electronic IC may be, they don't hold up well to atmospheric lightening, unless you are the military and can afford the necessary protection.

Not really, this whole thread is a rehash of what others and I have said about water injection. MHD is the moving via application of magnetic fields, or the generation of power by applying a magnetic field to a high energy plasma, of which car exhaust doesn't really apply to. I would doubt MHD would have little bearing on a combustion engine.

Ya'll can spawn as many threads about ICE's in a radio group as you like, but even one of the prime supporters has admitted that GEET is nothing more than a glorified water injection system with only small gains in gas mileage and emissions, both the exact same effects as water injection. Face it people, its not anything special. But you can have your fun I guess, it is a free country after all.

You know, it's all coming back to me now- this is the CORRECT reason
for using water injection- it eliminates detonation and ping.

Thanks for the history lesson! And yes, with it, you can burn a lower
octane of gasoline. The slower the gas burns, the less pinging. And-
some people are not aware of it, but the higher the octane of gas, the
slower it burns.

I looked in the manual- nothing about it. There is an CI-V 731 mode,
but apparently, this is not what needs setting either. There are also
several dozen memory locations, from 01H through 7FH, and I tried about
a dozen of them without success. Icom ain't making it easy!

Someone also mentioned that the MkII will do cross band repeat from
6m to 2m, and that the documentation was in the owners manual. They
were wrong too. (About there being any documentation in the owners
manual). I will also ask Icom about this, and post my findings here.
There is nothing in the makeup of the radio to suggest that this is
possible. It would have to be a dual-band radio, which it is not.

I'll call their tech support on the phone today, and post whatever
answers I find here on the newsgroup.

73 all, -Web in Myrtle Beach, SC

P.S. I found a place on the 'net with a schematic for a "clone" CI-V
converter for less than $5. If anyone wants a copy, I'll post it here.
You're on your own for getting it to work, though! I also have a source
for those hard-to-find 7 and 8 pin female DIN line jacks, for making
your own OPC-599 cable using Icom's included 14 pin mini-DIN jack. Who
wants to pay $70 for $5 worth of parts??? Hesco, INC. in Myrtle Beach,
SC. (803) 448-9903 Then you can use your trusty old Icom accessories
like the AT-150, etc. with your new IC-706 MkII!

Just how do you think hydrogen comes about? By alot more energy than you get by burning it with oxygen, thats for sure. Its the common rule of effeciency, and this process happens to be on the best examples. However, we do have plenty of sunlight with which to separate water into its constituent parts, so I would still deem it a viable technology, that is to burn hydrogen (not water, Phil, but hydrogen, I hope you realize they are different) extracted from water at huge solar stations.

It has QUITE A BIT!!!!! You mist it to reduce the surface area of the droplets allowing the water to heat and vaporize quickly. The reduces Charge Air Temperature, by vaporization of said water, which reduces temprature, which reduces detonation. Detonation is when the flame front doesn't start at the plug, but at the cylinder walls, because the mixture is so hot, all it needs is that extra juice available from the cylinder walls to trigger off center flame fronts early on before the plug EVER fires.

So yes, it prevents detonation, but BY COOLING THE CHARGE!!! Nothing less .... its an equivalent to the intercooler used on turbosystems. Heck you could replace the intercooler on a turbo system, but you don't have to fill up a turbo's intercooler with water over and over. If you want the proof in the pudding, write Lotus. They built the most powerful 4 cylinder production car ever made. It took the intercooler a step further with water, but removed the water from the air system and recirculated it instead of air to cool the charge air. The result? 285HP was the last remembered specific output for the engine as I can recall, all from 2.2Ls. What more do you need?

And when you run with less detonation in a engine, that means you can push the timing agressively up towards TDC, making more use of the resulting explosion. Get a basic mechanics text book on engine folks, all this has been written and rehashed millions of times, literally.

At first I didn't mind these threads, but it looks like 80% of the participants wouldn't know a engine from a electric motor.

Why do you think it is well worth it, Phil? Do you have any test data
or user reports which would indicate that the DSP module does
anything worthwhile? AFAIK, it is nothing but an auto-notcher
with some unspecified noise reduction capability. Auto-notch
is nice, but not $150 worth of nice. And some noise reduction
schemes are more harm than help. Are you sure this one isn't
one of those?

4828. RE: Icom 706 MkII (how to use QSY'er and 706 cross-band repeat)

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-17 00:00:00 UTC
From: kr4wm@bigfoot.com
Message-ID: <MPG.f78896744a38fe69896b9@news.infoave.net>
Source record: 150146

To all who have been posting about these items:

The QSY'er will work FB with the IC-706 MkII. You have to go into the setup mode by holding in the LOCK button while turning on the radio. Go to menu option 25, CI-V address. Set this to 04H. Then go to option 26, and set baud rate to 1200 baud. You could probably leave this set to auto, but since I _KNOW_ the correct baud rate of the QSY'er to be 1200, I went ahead and set it to this parameter. Next, go to option 28, and set it to ON. This says CI-V 731, which is meaningless to me, but Icom says to turn this option ON for Icom 735 compatibility (4 bit vs. 5 bit commands). Then turn your 706 MkII off. Next time you turn it on, your QSY'er will work like magic! Of course, modes are incorrect above 10m.

Now, about that cross-band repeater thing. According to Icom- (I PHONED thier tech support line- on hold for only a few minutes, NOT BAD Icom!) The IC-706 MkII WILL NOT DO CROSS BAND REPEAT!!! This was printed IN ERROR IN QST!!! The tech said they were expecting a bunch of phone calls, but not that many have materialized. The reason it cannot do cross band repeat is that it is NOT CAPABLE OF TRANSMITTING AND RECEIVING AT THE SAME TIME. End of story. Once again, NO, it CANNOT do cross-band repeat. Those of you who told me to look in my owners manual OBVIOUSLY don't have the radio OR the manual. You're probably looking at the erroneous QST article.

'Nuff said- hope to work you all on the HF bands someday with my 706 MkII! 73 all, -Web in Myrtle Beach, SC

4830. TRC-485 LCD adjustment

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-17 00:00:00 UTC
From: nospam@see.sig.to.reply
Message-ID: <MPG.f78860f53dcc9729896c9@news.richmond.edu>
Source record: 150148
Cross-posted to: rec.radio.amateur.equipment,rec.radio.cb

I own a Radio Shack TRC-485. The rig is mounted in such a way that the LCD display is viewed at an angle from below. At this viewing angle, the LCD segments are extremely low in contrast. It appears that the polarization of the LCD display is adjusted for viewing angles perpendicular to or from an angle above the unit.

Is there an adjustment on the rig which will allow me to change the polarization of the display so that the display will have high contrast from the low viewing angle? Most LCD panels have such an adjustment, I'm assuming it's inside the rig.

Thanks!!

Bert,

I've used water injection quite a bit over the past 15 years and have no
complaints. If the engine is optimized to use the extra "octane" equivelance
you can see substantial gains. I've seen no problems with engine life. In
fact is seems much cleaner inside. No carbon buildup etc.

One should understand that there are many different configurations of water injection. The simplest just draw vapor under vac from a canister.
The best I've seen is the Goodman system. He actually made it on television and in a few magazines several years ago. He modified his car with pistons that raised his compression ratio to about 13:1, and with only the pistons and his water injection increased mileage by 50%. His system used the air pump to draw the water and provided a very nice "fog" that was proportional to load of the engine, something no other unit I've seen does.

Also, of possible interest:
Have you seen anything on Rudolph Gunnermans A-21 fuel?
It is half water and half naptha gas. It works in diesel or gas engines.

I also recently tested a fuel treatment that promotes the fact that it has water in it. (In reality almost all of them do, though most don't promote it as a benefit. It is also in gas at the pump) . It has worked quite well in most of the vehicles that I've tried it in.

The truth is out there......

4832. JRC radio modification???

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-17 00:00:00 UTC
From: kk4bh@aol.com
Message-ID: <19980317003301.TAA03343@ladder03.news.aol.com>
Source record: 150167

A fellow ham friend of mine has a JRC Model JST-245 Transceiver. He would like to extend the transmitter output frequencies to be able to drive transverters. Since he doesn't have online capabilities I thought I would see what I could find for him. Checking the "ftp mod" sites resulted nothing.

Does anybody have this info or know where to get it? Please e-mail or post.

I'm still looking for an inexpensive source of 5.25" and 8.75" rack
panels (19" wide)... could even be slightly used with a hole or two if
not too bad...

Also need enclosures:
One in the 4 x 4 x 16" to 5 x 15 x 17" range...
One in the 6 x 7 x 10" to 8 x 15 x 17" range...

And a transformer, 16 to 20v @ 20+ amps, 115v primary.

Anybody have any of this? Please Email me.

Message-ID: <19980317044700.XAA21815@ladder03.news.aol.com>
Source record: 150183

Recently acquired a HUSTLER 20 M Antenna. It is faded from outdoor exposure, but I think I make out "Model 457V" and the word "trap" on the label. It's about 9 feet long with six radials projecting at the bottom and four near the top. It has what looks like a trap near the top with a three foot vertical whip at the very top, coming out of the trap. Anyone have any ideas on this antenna? I don't see a PL 259 or any other dind of connector. Where would the cable connect?

thanks
George

I am considering buying a nice condition used J-COM SDP-600 simplex/duplex autopatch "smart phone patch" made by ZTEL electronics that someone has offered. He is asking $175. He doesn't know a lot about it. What is this worth? Does it have autodial memories? Is it readily usable for a home repeater setup? Could I also use it for phone patches from my HF rig for missionaries and other traffic? I've searched the net and no answers.

4857. Kenwood TH-79A or TH-G71A

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-17 00:00:00 UTC
From: "Joseph E. Lee, Jr. (Joey)" <joeylee@datasync.com>
Message-ID: <350E2258.63FA9710@datasync.com>
Source record: 150192

I am looking into buying a HT soon and I can't decide between the 79A or
the G71A. If you own one of these drop me a line on what you personally
think. I am considering the 79a because of its dual recieve capabilites
but the illumintated keypad and computer based programing features of
the G71a are very attractive.

I am also open for suggestions on another brand. But i perfer Kenwood.

I have a Knight Kit T150 all in very nice condition, however, it came without the two octal plugs in the back of the chassis. Nothing happens without these plugged in.
Of course there was no manual with the transmitter either when I got it. I would be happy to purchase a manual for anyone, or pay for copies of one in order to get this Boat Anchor going. Dave Rust, wa0lkf@gte.net

Source record: 150198

I have the following Radio, and electronic equipment for sale. Reasonable offers or trades for radio and Pentium computer EQ. will be considered. All working last time tested unless noted. Shipping is extra.
Thanks

• Tempo-1- Tube type Ham Transceiver/with Power Supply 80-10 meters. Looks good and works well. 100W output. $200

• Motorola VHF Remote All tube Model: PA8270J SER.NO: 8697. There is also a tone Signal and intercom control on front below speaker. This is the type that was used by police and fire dispatchers in the past. Don't know if it works. $50

• Heathkit HW 101, 80-10 meter transceiver. No Power supply. It is receiving, but don't know about transmit. Not able to test. Looks are 7/10. As is $100.

• Hallicrafters Model S-108 SW Receiver with a calb. Ham band spread. Looks good works well.$75

• MFJ Rtty/CW Computer Interface Model MFJ-1224, used for copying code from the radio to your computer. $50

• Pearce Simpson, Guardian 23- All tube CB Transceiver/with mobil power cord and mounting bracket. Looks and works Good. $100

• Traynor, Group Two B- Audio Amp Head. High/ Low mic. in puts. Master volume, volume, bass, treble and tone shaper controls. $125

• Channel Master- Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM. AM not working. $125

• Sams CB Photofact- Several volumes, some continuos: numbers as follow: Continuos 57- 65. Individual 70,72,80,88,93,98,104,120,122,128 178,190,226.Will sell all or 10 for $4 each+ shipping. Single volumes are $6 plus shipping.

• AR Inc.- Stereo Amp, all solid state. $100

Message-ID: <351076D5.7337@MAIL.IDT.NET>
Source record: 149903

Mike, I agree, but I think they could have added just a FEW more features
to make it a really decent HF rig...

> > 2-No narrow SSB filter
>
> You can add Collins mechanical filters in 2.5kHz and 500Hz widths, and
> there are separate slots for SSB TX and RX.

2.5 isn't really narrow.... 2.1, ok, 1.9 even nicer, but nobody in their
right mind would want a 1.9 as their only filter (listening to all those
strange sounding people on it would drive you nuts (in times when you
don't need a filter)). See, the 2.5 is going to be like the 2.75 in the
900 CAT and 1000MP, which is to say its in line at all times, you can't
toggle it in and out as you need it. For 2.75, or even 2.5, that's fine.
I just think a "toggleable" SSB narrow filter slot would have been nice.
But then again, neither the 900 nor the 920 have it.
>
> > 3-NO Auto Tuner
>
> No *built-in* auto tuner. IMO, built-in means you pay for less
> flexibility. Sure, you could disable the built-in tuner on a rig that had one and use an
external, but then you'd have paid for something
you're not using that's just sucking up space and precious dBs. There
will be an external auto-tuner for their screwdriver mobile antenna
(which does look really short, but I'll wait for the tests...)

Added cost on the buyer's part. Built ins, while sometimes unnecessary,
help out in tuning to the edges of 40 or 80 (but then again, the 847 is
being marketed, IMHO, as a Satellite rig that also does HF, rather than
an HF rig that can do Sat work). Perhaps they could offer it as an
option, as on the original 900's. As for sucking up dBs... nah, not
much. External is another box to deal with (and they aren't cheap). Who
knows, these are just my ramblings, and I'm no radio designer....
>
> > 4-Only IF Shift, NO Width (so no "dual passband" tuning)
>
> > 5-No Manual Notch (what good is auto noch on CW... none)
>
> Well, there's independently adjustable low/high pass DSP... you can make this "passband"
as narrow as 25Hz.

Yeah, fine, but the DSP is at AF, which means you really aren't adjusting
your passband... you are playing with the sound coming out of the AGC...
which is already pumped up from the close adjacent 900,000 watt broadcast
station on 40M :) The shift helps, but even the old 757 had shift AND

width, which is a real way to do it, rather than cheaping out and doing it through the little black DSP chip.

> $0.02,
> Mike
> KF4TEK

Ditto, just my ramblings. I've never owned anything but Yaesu HF gear. My problem is with the newer rigs, the 920 and the 847. Don't get me wrong, for the price, they are awesome pieces of gear. But for a few bucks more they could be really much better competitors. For example, look at the filtering and Dual passband on the IC-756. Plus, you get an auto tuner. Now, look at the IC-746... same price range as the 847, but you can slap a total of 3 toggleable (and 4 fixed) filters into it.. You also have dual passband, and the auto tuner.... Only AFTER the filtering and passband (both of which operate at IF...) do you have the DSP to clean things up. I just think that Yaesu is starting to cheapen their line, and I'm sorry to see it....

Oh well, we'll still line up at the stores to buy them...

Cheers -- Pete -- KA2YDY

4868. Sears VHF 2M Ham Radio

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-18 00:00:00 UTC
From: KG0PB <wizardks@midusa.net>
Message-ID: <3510B320.4BE8@midusa.net>
Source record: 149904

A friend came back from a Ham-Fest with an odd radio. It seems that Sears at one time made Ham radios. It's a model 420.????????. If any one has any info on this radio please post. Interested in who actually made it. And when. The thing works just great. Only major draw back is the fact that it will only tune to 10k.

Thanks Sauron

I just "rescued" an immaculate RCA WO-33A Oscilloscope, with probes, from the junk pile. The trace is nice and bright, and the scope appears to work. I don't have a manual (of course), and zero information on this piece of equipment.

Does anyone have a manual I could buy/copy? I'd also appreciate any background and information on this interesting piece of equipment.

Thanks in advance,

Norm/KQ6SD

In an inverter, you must include circuitry and/or firmware to DC
balance the transformer, otherwise any small asymmetry of the
driving waveform will add up over some cycles until the transformer
is saturated. This is one of those life's little annoyances that make
UPS designs a wee bit more complicated than you might at first
think!

BTW, the residual flux isn't all that high usually and there are
circuits out there that will switch on the transformer at the right
point in the cycle to mostly eliminate the saturation problem.
I think most people should just live with the thump unless they
are feeling adventuresome. Also, M6 steel will have less residual
(if I remember correctly) than the crap steel used in cheap
transformers that seem to be the rule these days.

...Peter

Greetings from Texas!

I recently discovered my old Delaware ham radio license plate hiding
in a drawer. My call sign was WB3JBG. The plate is in good shape.
Last time the plate was on a car was in early 1980 (I moved from
Delaware to Texas in April, 1980).

If you collect ham plates and need Delaware, get in touch with me.
I want it to go to a good home.

I may have my Texas KC5NG plates somewhere too, but I'm not sure.

Dean, K5DH (formerly KC5NG, KA5JVU, WB3JBG)

I'll clear up the mistery. I've got a FT-847 on back order with HRO.
Their price was $1819, a fair price I thought, since I was able to see
the radio at the Charlotte Hamfest. I'll let you know how it plays when-
ever I get it.

>>had not some one thought about this before. Jee more toys!

Great. I always thought this product would happen in the future some time.
The real questions are:

1. How fast can it burst an image? If I'm mobile an using a repeater with
others
waiting to talk, is it a 5 second or a 2 minute delay for me to send or
receive a
picture.

2. How cheap can these things get. There is a mass market for digital
cameras
so the components benefit from quantity price reduction. The market for a
microphone
with digital camera, though is much smaller.

Still, if the answer to question 1 is < 10 seconds and the answer to
question 2
is < $100, then I think these things should take the 2 meter ham community
by storm.

I would love for that to happen and then, while driving, send some images to
my
club repeater with instructions to email them to me at work!

I'm looking forward to everyone else's 2 cents and especially anyone with
any
additional info on this thing. Internet searches do, indeed turn up zilch.

What is a blinker? I mean, there are the types that actually interrupt current flow for the purpose of flashing a lamp, and is even used as slang for turn signal in America, but what does it mean in the UK? At first I thought it was what people here called blinders (of the horses type, but for humans, usually used to mean "a block to reason"), but you have used it over and over, so now I have a curiousity as to what is meant.

If "a block to reason" is what is meant, you have your own "blinkers" on this subject.

Sincerely,

Pearce - KF4MOK

I am writing this to thank all of you for the responses I got, from the newsgroup and via email. The amount was overwhelming, and it made me feel good that there are still hobbies where people care about the newbies among their ranks.

I finally got my tech no code licence, and my call sign. I am now officially part of the club!!!! If any of your are in the Monterey, or San Jose area, I know a couple of you are, please give me your call and what rptrs you are on, the freq, the pl tone, and offset. I would love to raise you and thank you with my real voice :-)

Again, thanks for all the help, and ham'ing looks like its going to be a great deal of fun.

How does your exhaust system hold up? Also, I think the main drawback of
a water injected system is head gasket removal (a way of saying cylinder
overpressure) and valve erosion, but I have never played with it.

> One should understand that there are many different configurations of water

And the gains would be so, if there was probably a roughly 30% reduction
in horsepower. Perhaps Gary could calculate the exact amount, since he
has the formulas and test apparatus. Not to mention this thing really
must have been heck on head gaskets. Perhaps this experiment is better
to be performed in a Rodeck?
(solid head/block assembly).

>
> Also, of possible interest:
> Have you seen anything on Rudolph Gunnermans A-21 fuel?

Catepillar openly admits experimentation, but they have also reaffirmed
that fact it does not add power, but does help to greatly reduce
emissions that are special to diesel motors.

>
> I also recently tested a fuel treatment that promotes the fact that it has

But the key to mixing water and gas, is alcohol. Alcohol readily
dissolves water.

These frequency meters are for sale;

Two (2) Microlab/FXR model Y164A
Range 50GHz to 0.02 GHz over 7 turns of micrometer screw.
Waveguide input,waveguide output,dimensions of guide 0.625 * 0.30 inch

One (1) Marconi/Sanders model 6049/2
Range 5.3GHz to 18 GHz over 7 turns of micrometer screw.
Coax input,coax output.

All are variable cavities adjusted by means of a calibrated micrometer.
Like new condition.

Best offer, email or

I wanted to add some tidbits to some of the points Pete made:

> 2-No narrow SSB filter

You can add Collins mechanical filters in 2.5kHz and 500Hz widths, and
there are separate slots for SSB TX and RX.

> 3-NO Auto Tuner

No *built-in* auto tuner. IMO, built-in means you pay for less
flexibility. Sure, you could disable the built-in tuner on a rig that had
one and use an external, but then you'd have paid for something you're not
using that's just sucking up space and precious dBs. There will be an
external auto-tuner for their screwdriver mobile antenna (which does look
really short, but I'll wait for the tests...)

> 4-Only IF Shift, NO Width (so no "dual passband" tuning)

> 5-No Manual Notch (what good is auto noch on CW... none)

Well, there's independently adjustable low/high pass DSP... you can make
this "passband" as narrow as 25Hz.

What I want to know is, how much will this water injection improve the output of my alternator, allowing me to run more mobile radio equipment? (Someone had to get this thread back on a topic pertinent to these newsgroups...)

Does anyone still have one of these old units for a good price? A friend of mine is trying to scrimp and save for his kids and feels like he can't afford a base radio in the house for hitting nearby repeaters, etc. I want to give him one so he can at least talk on the air without having to go out to his car . . . But, I'm not made of money either.

Anybody have a cheap radio he could use? Doesn't need to have a digital display, or memories or out of band rx, or anything fancy. We're talking less than $50 or $60.

Thanks in advance,

Scott

Source record: 149994

I have an AMP Supply LK-800-C high frequency 160-10 meter amplifier. I am the original owner and have had all the factory modifications installed in by Amp Supply's former service manager. It is the TNY version with dual-voltage Peter W. Dahl hypersil transformer. It is in excellent condition and since I rarely get on the air anymore I don't need it. I'm asking $2900.00 with an extra tube but will entertain reasonable offers from serious buyers. Thanks.

4926. Re: Kenwood TH-79A or TH-G71A

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-18 00:00:00 UTC
From: Jim Gerke <jgerke@pulse.net>
Message-ID: <3510ADF6.111F@pulse.net>
Source record: 149998

I just bought a TH-79A(D) last week. In fact it is the third one we've had at my house. ALL of them came with CTCSS decoding built in. It is included in the US version radio.

My son, KC5SXD, just bought a G71A. Operationally it's almost identical to the 79A except it does not have the dual display and you can't monitor both bands at once. The G71A is programmble via a computer whereas the 79A is not.

I prefer the feel of the 79A - it is slimmer and feels better in my hand, while the G71A is too fat for me. It feels like I'm holding a hand grenade. I don't like the Yaesu FT-50 for the same reason. But my son loves the G71A, and he used to have a 79A.

4927. Re: Kenwood TH-G71A software problem

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-18 00:00:00 UTC
From: Jim Gerke <jgerke@pulse.net>
Message-ID: <3510B15A.300B@pulse.net>
Source record: 149999

The following is the mail message I sent to Kenwood last night about the problems I'm having with the G71A software:

When I attempt to start the G71 programming software (downloaded twice from Kenwood's ftp site), a box with the following error message pops up: "The MSVBVM50.DLL file is linked to missing export OLEAUT32.DLL:421." There is no file named OLEAUT32.DLL:421 but there is one named OLEAUT32.DLL. Anyway, the program never starts.

Also, underneath the previous error message box, another box pops up which says "A device attached to the system is not functioning."

All other files listed in the README file are present and the G71 is turned on and is connected to the PC via the PG-4P programming cable.

I have received an automated response from Kenwood that they received it and would let me know something in a few days.

I'm glad I'm not the only one having trouble with it.

From: Charles Hugg <chashugg@earthlink.net>
Message-ID: <350F80BD.3886@earthlink.net>
Source record: 150014

I have just acquired at a hamfest a Yaesu FT-5200 dual band transceiver. It does not work on 440 MHz, but it does work on 430 MHz, so I can't tune it to any of the local 440 repeaters. Also, it works fine on 2 meters, but will not tune to any frequency out of the 2 meter band like 155 MHz. Could this be a radio that was designed for use in Europe and has restricted frequency coverage? If so, is there a mod I could perform to open the radio up for use on US frequencies?

Thanks for any help you can give me,
Charlie, K5MBX

What speed should the water be injected 300 bps or maybe 56 k bps?
Should it be AM or FM modulated?

Looking to Buy/Trade for Autopatch setup that will work with a Radioshack HTX-202 Handheld (at first) and later can be hooked up to a standard Moble Rig (adi-146 50 watt moble rig)

Have Sony Playstation Modification Chips (3 which sell for 10-30 dollars each) and a CD-R which I can burn your favorite Library of information onto (got a favorite webserver? or Dir on cdrom.com?)

and can also pay cash (but extremely broke, thats why I hope to trade something)

Let me know!!

Brad

Charlie,

Did you buy the radio somewhere around Canada, because you can not
operate the 440 band there. I had a Icom2700h dual band that had the
same problem except the two meter side of the radio had stopped
receiving for some unknown reason. The radio is still at Icom, so I
can not tell you anything at this point. Good luck!!

The band 430-450 MHz is all amateur in Canada. It's 420-430 MHz
that is not amateur in Canada, and also not allowed in the U.S. within
a certain distance from the Canadian border to avoid interference with
existing non-ham users of those frequencies (mobile phone, some trunking
systems, police, public transit, etc.)

No, and either has the other 99% of the country. People have to go to school, and take jobs where they live. Not everyone in our country can fit into the two or three cities that still produce hand made wood products.

We need to teach the skills required for the jobs that are available everywhere, in every city, and used in everyday life.

Not everyone wants to be a woodworker, nor are there enough jobs in that industry for everyone. This is a skill that can be taught in College or Trade School. High School should teach things that EVERYONE will be using no matter WHAT job they end up with.

How many people after High School have all the large expensive machines at there homes that they used in Wood Shop?? What good is this "skill" if you don't have the tools needed?

It would be just as silly to have a Brain Surgery Class or Slinky Making Class in High School.

:+>
:+> --Steve

No, the digits are "dropped" through a series of resistor chips in
the bottom of the display - the voltage to it is regulated through
the CPU chip.

You may accomplish some difference by adding some dropping resistors
or diodes to the lamps instead, to reduce the overall background
illumination of the display. There is a way to do this - I'll have
to check my notes - they're all tied common to a buss voltage.

Regards!

As the owner of a TH79 I cannot tell anything about the G71A, except
that it can't do crossbandrepeating, as it only has one IF. The TH79
does, and I find that very usefull. Also, the difference in price
between the two type you mentioned isn't that much.

Programming the TH79 can be menu-driven, and it has a built-in
help-function (the G71 might have this too). The European model of the
TH79 has receive capabilities from 67-174, 300-470 and 800-999 MHz,
which I'm not sure of the G71 has.

The TH79 doesn't come with CTCSS decoding out of the box, where I
guess the G71 does. Encoding however is included.

As far as I know, the TH79 cannot be programmed via your PC, the G71
might have this feature.

These are only a few things to think about when deciding.

Regards,

Rob B.

in
> > >this country anymore, especially out of wood.

> > The point of teaching things like wood shop is to expose people to
things that they may otherwise never know anything about.I am a machinist,
and if you are like 98% of people in the country you don't know what a
machinist does. One of the reasons for this is it is totally ignored by the
public school system. Believe me, manufacturing is far from dead in this
country. The demand for machinists is so high I can quit a job at 9:00 am
and be working for someone else by 3:00pm that same day. No exageration,
I've done it four times in the last year (bad form I know, but I'm spoiled
).One of the biggest reasons for the lack of skilled machinists has been no
exposure in the public school system. Most manufacturing takes place in out
of the way places, often on the edge of town.The majority of shops employ
15 people or less. There are thousands of these manufacturers all across
the country and because of their small size and lack of exposure to the
general public finding skilled people is a real challenge. By the way, I
personally know several professional woodworkers. And no, I don't live in
New england.

Okay, I need to sell this radio because I have too many toys. I will
sell it for $300 shipped to lower 48 States. This is a beautiful and
unique receiver, and it will look good in your stereo cabinet. When
its gone, its gone. Have a good day!

In the days of high compression engines and only low octane fuel I built a few water injection systems that worked very well to reduce engine knocking and running on. I'm an engine tuner, not a rocket scientist so I'll leave the theory to the experts, but I will tell you they work.... with an added benefit of permanently de-coking your CC's.

I usually used a windshield washer tank and pump plumbed to a spinal syringe inserted in the intake manifold. The electrics were vacuum operated, I usually used a vacuum advance diaphram connected to a microswitch with a spring on a threaded fitting to adjust the moment of vacuum that was suitable for the particular engine. Sometimes I had a manual override switch to inject when towing up steep grades or other high demand situations. I never did dyno testing on the units, but they certainly ran better.

Scott Van Aartsen wrote in message <350F339C.9775EF96@rconnect.com>...
Please tell us newer hams what in the world you're selling. You might be missing a good opportunity to get top dollar for your used equipment because Joe Ham doesn't know what a "Yaekencom TS-74100DA" is. Even saying it's a VHF or HF or UHF rig --and whether it's a base, mobile, handheld, etc. helps...but that is not sufficent. Please give as many features as you can. It's tough to compare radios when you don't know whether you're comparing apples to oranges or not.

Speaking for all newer hams...much thanks,

Scott Van Aartsen

You have to reset the radio (3 buttons) and then program the band limits
for RX/TX. Search for the mods on oak.oakland.edu, and those files
explain it in more detail.

Source record: 150092

10 meters is fine and getting better. Yes, you will probably be able to make good contacts, but the real key is what antenna are you going to use. There is a huge difference between a 6 foot helical whip and a 50 foot tower mounted yagi.

My opinion is that you get a radio get the best antenna you can afford and have a blast. Even if you don't talk all over the world you'll still meet lots of nice people and have fun. A nice antenna that will work for you would be a wire dipole. It will be quite short and easy to manage. \

I don't know anything about 10 meter radios so I can't provide help other than to say for a little bit more money you could buy a nice used HF rig that will make you happier in the long run.

Have fun.

Jeffrey,
I purchased my 706MKII in Nov'97. The biggest hassell I had was getting my coupon from HRO. It took 3-4 weeks before they sent it. I mailed it in Dec'97 and got the cable in 2-3 weeks. REMEMBER!!! You have to satisfy 3 things to qualify for this offer. Send in the warranty registration card (there are 2). One is mailed directly to Icom and the other sent in with the offer. You also have to not only include the coupon, but also a copy of your original purchase invoice. Good luck.

Hello Kilroy:

I really wonder if you might do better buying a good used rig for $700-800.
Neither the 840 nor 707 are going to work out well as a RTTY Transceiver.
Look for FSK support, QSK operation and finally, You can always add an
after market DSP processor from Timewave later.

4991. Best radio for AM/FM/WB reception?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-19 00:00:00 UTC
From: baker@sgi.net
Message-ID: <351b4640.169758239@news.sgi.net>
Source record: 149802

Hi All,

This question may be off topic, but its the closest forum I could find to ask it in. I live in Western PA and would like to buy a radio that provides the best reception for AM/FM/WB. I want this radio for in my office where it must co-exist with computer equipment. I have a few other desireable feature, but none are requirements. I would like it to have a digital tuner with presets, external antenna inputs, and a digital clock. Sound quality is a concern, but not a major one. Primary need is for sports broadcasts, AM talk radio/news, and weather band.

I would also like to hear opinions on where the best places to buy this radio. Retail stores, mailorder, other?

Thanks in advance,

Tim Baker

I would get a hold of Yaesu and supply the Serial # as you might be
correct. In the manual it states various versions and the freqs that
they will work. Ref can't use 440 in Canada it is totally false we can
use from 430-450. Do you get a display of the 440 freqs or is that
blank. My 5200 covers all the freqs and can also go outside of the 2m
band as well on receive.

That's a bit of a stretch... Should we eliminate History? Does not seem applicable to someone who want's to be a nurse, is it really necessary for a brick layer to have good grammar, perhaps he could bypass english class. Good math skills would not necessarily make a good Crisis Intervention Counselor. What exactly could we teach that EVERYONE would use?

> How many people after High School have all the large expensive machines
> at there homes that they used in Wood Shop?? What good is this "skill"
> if you don't have the tools needed?

I don't know what they taught in your High School, but my wood shop and metal shop classes taught manufacturing processes, raw material conversion and the like, along with making 'gadgets'. In metal shop we were required to cost out material for our metal dustpans, consider our hourly labor cost and figure out how much we would need to sell it for to make a profit. Does this seem useless to you?

> It would be just as silly to have a Brain Surgery Class or Slinky Making
> Class in High School.

Why? I took a drafting class as an elective, while I've never done any drafting it sure came in handy when I was selling industrial automation equipment and had to deal with design engineers.

NIce tuner, I just got one. Mine had several problems though out of the box. Cold solder joint at the rear of the antenna knob and several "dirty" spots on the roller inductor. Works well now and I really like it. I use mine on a IC-706MkII that I bought at the same time.

I would be willing to swap the following list of equipment for UHF rigs
High-Split (450-470) preferably GE or Motorola but all others considered.
Name your deal!!

Quantity Desc
4 Motorola Mocom 35 VHF, 15 watts
1 Repco XJS300 VHF Mobile, Xtal, 25 watts
1 Marconi Series 500 Base/Repeater, VHF 30 watts
with pwr supply. Desktop cabinet (can be
rack
mounted with minor work)
1 Motorola MT1000 UHF High-Split Portable with
drop-in rapid charger and high-cap battery
2 Marconi DF56? remote trunk mount VHF rigs, 30
watts. With control heads.
1 Motorola Radius 2 ch UHF Low Split (403-430),
40
watts, CTCSS/DCS
1 Emperor TS5010 10/11 meter rig. All modes. 30
watts.
1 ADI-AR146 50 watt CTCSS encode and decode
DTMF encode and decode, 40 memories.
TX and RX 136-169.
2 GE Custom MVP UHF chassis. Parts Only
1 GE Custom MVP VHF chassis. Parts Only

All units mentioned above are in working condition with the exception of the
Custom MVP units.

Drop me a line and let me know what you've got!

David.

>a dozen of them without success. Icom ain't making it easy!

It is easy. Go to set mode. Set function 24 to ON. This puts the radio in
IC-735 mode, which is the only mode the QSYer understands. Set
function 22 to 1200 baud. This is the speed of the QSYer. Now set
function 21 to 04H, this is the address for an IC-735, and that's what
the QSYer is going to expect. Now power down and back up and
the radio should respond to the QSYer just as if it were an IC-735.

>Someone also mentioned that the MkII will do cross band repeat from
>6m to 2m, and that the documentation was in the owners manual. They

Correct, it cannot do crossband repeat, and the manual doesn't
claim that it can.

I don't think so. All of today's radios are computer based, but having
them controlled by a computer you can program yourself is much
better than being solely dependent on firmware buried in a custom
computer chip.

>One computer virus, disk crash, etc. and your off the air while you
>correct the situation.

True, but you're off the air anyway until you get the P-38 running
again. Besides, who ever heard of Linux crashing? :-)

> Then there is the next operating
>system release. Will your existing software work OK with it etc.

Not a chance. But Kachina released the entire API, so you can
easily write your own driver programs. That's important to those
of us who don't use Windoze in the hamshack.

>Another concern I have is the rate at wich computers are moving

It simplifies things. And it brings things back under *your* control.
I hate it when I'm stuck with what the manufacturer thought was a
clever user interface, but turns out to be an awful kludge for my
style of operating. With a software controlled radio, I can change
the user interface to suit *me*. That simplifies my life.

I am also involved with computers for a living and find it nice to get away from a keyboard once in awhile and be able to actually twist a knob or two and flip a switch.

Most of the modern HF rigs have a front panel for *hands on* control and also offer a data interface, normally rs232, for computer control through a canned program or a published set of API commands. With these radios you have a choice of how you want to operate. With the Kachina you are restricted to only using a computer which makes the radio harder to use for mobile or portable operations.

The main advantage that I see in computer control is to be able to operate your rig from a remote location.

>anymore? All I see is 79As popping up everywhere.

TH-79A is the U.S./Canada version. There are actually several versions
around, depending on the restrictions of the countries where they are
sold. In most cases the difference is in the diodes which select various
frequency limits, but the A(D) models have the cellular phone region
blocked in the microprocessor.

Date: 1998-03-19 00:00:00 UTC
From: dgf@netcom.com
Message-ID: <dgfEq36pE.FEF@netcom.com>
Source record: 149834

I bought one of those MAHA fast-chargers as advertised in QST and got it home only to discover that the wall-wart power supply was dead on arrival. I took it back to HRO and they gave me a new wall-wart power supply for it (taken from another box). The salesman told me they had recently experienced several situations just like this. So my suggestion is that you pre-check your wall-wart power supply in the store before you walk out, so you don't have to make another trip back. Maybe Maha will start testing their products before they ship them, too.

David,

I'd love to see which "supporter" has "admitted" this!
Anyone that mistakes the GEET for water injection has little understanding of it. Water injection is an "add on" that simply supplies water to aid combustion. The GEET does not need water at all to work. At the same time, in a slightly different configuration, it can burn large amounts(up to 85%) of water with little hydrocarbon fuel. Either way I fail to see how it can be confused with water injection.

Thanks....

Grant

Brand new Icom IC-W32A dual band ht for sale. Has 5 watts output, true dual band V/V, U/U and V/U receive, cross band repeat and extended receive range without mod. Comes with BP-180 battery for 3.5 watts output, instruction manual and original packaging. Also comes with a CP-12L cigarette lighter adapter to power it and recharge the battery in your car. This radio is brand new, I bought it 2 weeks ago only. Selling because I want to get back into HF and need to buy a new rig. AES sells this combination for $346.90. I am asking only $290. and that includes shipping and insurance to your door. The price is good enough that I won't negotiate. Inquire by email.

Hi All;

I have a MFJ989C and am trying to cal the meter on it. Inside looking down from the front with the top off are 4 pots on a ckt board.

1st on on left cal wattmeter high power (i figured this out by trial and error)

2nd from left cal wattmeter low power. (I figured this out by trial and error)

3rd from left = ?????

4th from left = ??????

I think they are for swr cal but not sure. Need to know how to set them. Have manual off the net but no schematic in it. What to set both of them correctly before I button it up.

I have the following equipment for sale, everything is brand new and still on warranty for nearly one year. Icom IC-W32A dual band ht with V/V, V/U and U/U operation, cross band repeater and extended receive without hardware mod. It comes with a BP-180 battery that gives 3.5 watts output. It gives you 5 watts with a bigger battery or outside dc power. Accessories include HM-46 speaker mike , CP-12L cigarette lighter adaptor for operation and recharging and CSW32 software for programming. A check of the latest prices at HRO gives the following:

IC-W32A : $304.95
HM-46 : $ 59.95
CP-12L : $ 36.95
CSW32 : $ 12.95

For a total of $414.80.

I will sell the complete kit only for $325.00 including shipping insured by airmail to your door. Please inquire by email. Disregard my previous posting, I had forgotten about some accessories.

Just in case you aren't aware of it, the UPS site is a convenient way to
see what's going on with a package using it's tracking #:

http://www.ups.com/tracking/tracking.html

Here you can keep tabs on whether the item was actually sent and exactly
what time it arrives at the UPS depot.

I noticed that the Kachina advertisement in the April issue of QST
had a quote from QST about the Kachina computer based system.
Does this mean that the QST review has been completed and will be
appearing soon (or is this an April Fools joke by Kachina)?

From: k9sqg@aol.com
Message-ID: <1998031902232301.VAA29278@ladder03.news.aol.com>
Source record: 149921

Selling a stock R7 receiver. No optional filters, no noise blanker, etc., just the receiver. Included are copies of service manual for R7 (about an inch thick), service manual for TR-7 (also about an inch thick), and virtually all owner's manuals for 7 line accessories (linear, tuners, speech processor, keyer, etc. etc.). I'd rate the receiver as an 8.5-9 on a 10 point scale. Receiver, and copies of manuals, double boxed shipping, all for $550 to your door, conus only, will not ship outside continental US.

I'm new to the radio world, and I need some help with data radios. I am an engineering student and I have a project that I am working on where I essentially need a 3-4000 foot serial cable. Obviously, I would like to do this with data radios or radio modems. The commercial products I have come across are extremely expensive - $1500 for a pair of radios and usually overkill in capability for my needs. I only need to transfer a couple k worth of data every few minutes.

Could anyone give me ideas on how to transmit serial data for a reasonable amount of money with a mile or two line of sight range?

I would greatly appreciate anything at all someone could tell me.

Thanks,
mike

I've got a TH-79E. You can definetly open 800MHz - 999MHz, but you have to send it to Kenwood for that. Tampering with it yourself disqualifies your warranty.

Learn to write good ennglish too. It's bad when you communicate badly. Actually it is disgraceful.

Don't you feel ashamed writing like this, even Bill Clinton who I think is a first class mothefucker is not this bad. I mean bad english sucks!!!!!!!!!!!!!

From: Harry <harry@connix.com>
Message-ID: <3510FEC8.6BC8F52@connix.com>
Source record: 149933

Hi & thx for reading.
I am using a Yaesu FT290 with several microwave transverters. Since the FT290 has no control signals sent down the coax on transmit, I have to throw a switch on the transverters whenever I transmit... What I would like to do is wire these switches into the 290's mic/mic jack.....
Ideas on this approach, as well as other possible solutions appreciated.

Being involved with computers for a living I always wondered if the
liability of having a computer based radio is greater than the
benefit?

One computer virus, disk crash, etc. and your off the air while you
correct the situation.

Then there is the next operating
system release. Will your existing software work OK with it etc.

Another concern I have is the rate at wich computers are moving
in changes. Makes me wonder how compatible the existing hardware interface
would be in 5 years. I have plenty of friends who have old devices from
way back in the mid 1980's that are not fast enough for todays speedy
computers. If the resale value of a 5 year old computer drops like a rock
what will happen to a radio that is computer based on that obsolete
computer?

It seems like computer dependance introduces a bunch of variables into
the mix that a plain dedicated radio with a CPU in it does not.

This is not a flame just a concern. I like technology more than most
people (when it works). I just draw a line in how much I want to depend
on it to complicate things further than they already are.

When you start with a radio and add a computer interface and add
the computers as a control device you add several million transistors
disk drives, memory, video, disk controllers, Video I/O monitor, cables,
keyboard, serial & parallel boards, the BIOS, firmware and MILLIONS OF
LINES OF SOFTWARE CODE to control a radio. I am sure its a technological
miricle when it all works correctly... But what about when it does not?
Are you off the air due to a computer problem? Can you run the radio
without the computer?

Hi. I have a Pasokon SSTV board for sale. I'm the original owner.
The board is in perfect condition, and includes the software and manual,
and a copy of the original article in QST about the board. Price just
reduced to $100.

I'll pay shipping and insurance (to the US). If interested, please email
to the address listed below, and we'll swap particulars.

Thanks very much,

Ken, N1NEG

PS This is perfect for an old PC. A 486 and DOS is perfect. Windows
not required.

: Anyone know where to get some ht1000 software??
I think what everyone is trying to say is that the SW is licensed, and Motorola does NOT appreciate it being given or traded away, and watches groups like this frequently to make sure their property is kept intact.

Getting SW from anyone other than Motorola is STEALING (the same can be said for any SW package with a license), and thus wrong. Go to your local Motorola dealer, and I'm sure you can program your radio for less than the cost of the SW, or get the SW directly from Motorola, and be legal.

Source record: 149703

If anyone has a schematic for this Monitor (made by Daewood in the Late 80's or Early 90's) please past a reply. The Monitor is good the cable went bad and had it fixed at a local shop. They did some thing and now they have the colors mixed up and cann't get any information on it and have given up and say it's not repariable. I think they got the connections wrong on the board or used the wrong cable in the first place. I hate to junk the monitor because of a misconnection. If someone can help, it would be much appreciated. 73's

I've never had any problems with the exhaust or the cylinder heads, though other have said there are potential problems. Somewhere in the information I've gathered it warns not to use it with a very rich mixture.

> How does your exhaust system hold up? Also, I think the main drawback of

Power went up about 15hp, due to the compression increase. This was on a small 4 cyl.

> And the gains would be so, if there was probably a roughly 30% reduction
> in horsepower. Perhaps Gary could calculate the exact amount, since he
> has the formulas and test apparatus. Not to mention this thing really

> > It is half water and half naptha gas. It works in diesel or gas engines.

I don't think they were looking for a power increase? Just a cheaper, cleaner alternative. There ARE major problem when using water in this way. When you are feeding the engine larger amounts of water like this, every time that you shut off the engine you end up with water in the cylinder. My sources said that engine life, when using large amounts of water in this way, was cut dramatically. I have a video of Gunnerman running this fuel in his Porsche,

it didn't seem to suffer any power loss. But if engine life is reduced I'd hate to be replacing a Porsche engine every 2 years.

> Catepillar openly admits experimentation, but they have also reaffirmed

> >

Actually, alcohol does work fairly well for this. Another alternative that works at least as well, that almost everyone has on hand is liquid dish washing soap. Only takes a little to mix a fairly large amount of water with the gas. Using a strong dish detergant, some isopropyl, and a few other surfactants I was able to mix 35% deionized water with gas. Car ran pretty decent. It did make readily apparent the weakness of my very old point ignition however.

I don't think it is practical to feed this type of fuel into an engine via conventional fuel systems. I also forsee problems with it during our rather cold winters.

> But the key to mixing water and gas, is alcohol. Alcohol readily

I need the mic pinouts for the Yaesu FT-707. I want to use this with my KAMPLUS, but do not have the manual. I would also be interested in a copy of the manual for the 707.

Thanks

Jeff KE3UV.

These radios are covered by a Global warranty.
Your local repair may complain and tell you your not covered bur you are.

If Yaesu wanted to stop grey market sales they could very easily. They
know from the serial numbers who bought what (wholesalers).

But they dont insted they try to screw the consumer.

If you want warranty service demand it. You will get it.

I dont enjoy being screwd for more money just because I live in the USA.

5114. Gordon West Special Classes at Del Rey Yacht Club

Newsgroup: rec.radio.amateur.equipment

From: Julian Frost <jfrost@odaiko.ss.uci.edu>
Message-ID: <Pine.LNX.3.95.980320091923.303F-100000@odaiko.ss.uci.edu>
Source record: 149772

Gordon West Radio School Presents:
T W O Special Classes!

No-Code Technician Amateur Radio
Licensing Class For Mariners
Friday June 5th, Saturday June 6th and Sunday June 7th 1998
At the lovely Del Rey Yacht Club, Palawan Way, Marina Del Rey, CA.

And…

General 13-wpm Morse Code
And Theory Review Class
Saturday June 6th and Sunday June 7th 1998
At the lovely Del Rey Yacht Club, Palawan Way, Marina Del Rey, CA.

No-Code Technician Class for Mariners -- Class Instructor: Gordon West,
=================================== WB6NOA
This special class is designed specifically with mariners in mind. Learn how Ham Radio can make your next cruise even more fun! Stay in touch with fellow hams as you sail down to Baja, use ham radio phone patches to keep family and friends advised of your position. This fun and entertaining two-and-a-half day class starts on Friday afternoon and covers everything you need to get your Federal Communications Commission No-Code Technician license. Take the two multiple-choice exams right there in class and get your callsign two or three days later! Students who pre-register will receive the Gordon West "No-Code Technician Plus" textbook, theory cassettes, and a special pre-study package. The class fee includes nineteen hours of tuition, beverages, lunch on both days, a barbecue on Saturday night, and a special Saturday night after-class workshop detailing marine installation and use of ham radio onboard yachts and powerboats.

General 13-wpm Morse Code
and Theory Review Class -- Class Instructor: Julian Frost, N3JF
========================
This class is for mariners that want to upgrade to the General Class license, but like many people, find the 13wpm Morse Code requirement their biggest stumbling block! Make 1998 your year to upgrade. Don't let the Code hold you back any longer, the Worldwide HF bands are waiting for you. In fun, stress-free way, your instructor will take you from a shaky 5-7-wpm all the way up to 13-wpm, or higher, in preparation for your exam on Sunday afternoon! Techniques in passing the CW exam will be taught, and there will be multiple demonstrations showing just how easy it is for YOU to pass the 13-wpm, or even the 20-wpm code exam! Theory review sessions are held throughout the two days to help make passing the written exam even easier. Students that pre-register will receive the Gordon West

"General Class" textbook, Gordo's exclusive CW tapes, and a special pre-study package. The class fee includes sixteen hours of tuition, beverages and lunch on both days and a barbecue on Saturday evening. General Class students join Gordo and his No-Code Technician class for an operating session and workshop dedicated to installing, using and maintaining ham radio equipment aboard yachts and powerboats.

--==--

For full details on either of the classes described above, please call Gordon West at (714) 549-5000 between 10am and 4pm, Monday through Friday.

Does it really take a rocket scientist to realize that global economy is
just that, global! If everyone got paid on the same wage scale and paid
the same amount for goods bought we would not have any reason to, oh
shit I am just pissing off my time but jeez you need to think about what
you said a little more indepth with reference to being screwed. I bet
you don't mind selling stuff we make here to other countries for a high
dollar and buying stuff back at a low one? Really think about it!!!

5117. Yaesu FT--101ZD, FV-901, SP-901P

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-20 00:00:00 UTC
From: Rudy Marcelletti <rudym@net-link.net>
Message-ID: <01bd542c$359b3420$d6849cd0@rudym>
Source record: 149775

What is an appropriate price to receive for mint condition Yaesu FT-101ZD with DC-DC converter, fan kit & FM board; FV-901DM scanning external vfo with memories, SP-901P matching speaker with phone patch, YD-844A desk mic and D-104 mic, manuals and boxes for the vfo and spkr. 101ZD box destroyed by mother while I was away at school. I purchased the rig, fm bd, converter and spkr new. The vfo was added later and was obtained from a known ham--my Elmer. Also have a driver tube and 2 final tubs for the rig. These were given to me and I do not know if they are used or not. The rig is still on its original tubes and output on most bands is about 125 watts in "tune" mode. The rig has all ham bands from 160 to 10 meters and has a digital readout. Only opened to install above options. Never had the need for filters or other "Fox-Tango" modifications or "tweaks" It's the way I got it from AES in 1983. I have an IC-735 and an IC-706MKII and just don't have the need for it much anymore.

If anyone has any pricing information or is interested in the stuff--please e-mail response.

Thanks, Rudy, K8SWD

>>this with data radios or radio modems. The commercial products I have come

The datasheets for RS485 line drivers (and the earlier RS422) specify
distances up to 4000 feet. This will only work at low data rates, but
this should be ok for you. The chips only cost 10 bucks or less,
choose your cable carefully. Check out MAXIM, LINEAR TECHNOLOGY and
NATIONAL SEMICONDUCTORS for application notes (they all have web
sites).

Be careful of using modems, this will work but you need to give both
modems secret incantations to get them both online. Modems expect to
see a dial tone before they'll whistle. There are modems that can cope
with liased lines but again check with the manufacturer, I don't know
much about leased lines, they may only match telephone circuits...

In general Electronic circuitry needs to be well designed to drive
4000 feet of cable. The wire will have a high capacitance (hint don't
use thick cable!) look for LINE DRIVER circuits in the databooks
(MAXIM) ...

Greetings all, I recently acquired an FT-980 CAT xcvr. I was wondering if anyone out there knows which (if any) of the available software will work with the Yaesu 232 (FIF232 ??) interface to control a 980. I know it all controls the 1000 series the 990 and assorted other Yaesu's, but none mention the FT-980.
Any info is greatly appreciated, and replys can be sent to me here or preferably by email (tmedlin@dimensional.com).
Thanks in advance and 73,
Tim KB0OGD

I have opened more boxes of my Dad,s estate and here is what is
available:

B&K Solid State RF Signal Generator Model E-200D
100 khz to 216 Mhz
-106 to + 2DB out
Output level meter
Crystal Calibrator

Appears to be new in the box $75.00

B&k Semiconductor Tester Model 530
in/out of circut to 1500 Mhz

Appears to be new in the box $50 (cost $445 in 1985)

B7K Solid State Dual Trace Scopr Model 1479B
DC to 30 Mhz Dual trace 5" CRT

Appears to be new in the box $125 (cost $705 in 1985)

K-Enterprises Model 4X6 Digital freq counter
250 Mhz
6 digit 7 segment readout
top horz segment of first 7 segment indicator not working

Like new physical condition $40

NOVEX Grid Dip Meter Model DM-4061
1.5 to 250 Mhz
This is same as MFJ 201 Meter

Appears to be new in box $75

Micronta 22-175 LCD DVDM
Hi Res Volt Freq Meter
1000 DC, 750 VAC, DBM -27 to + 54
Measures capacitors 4pf to 400 MFD
Freq 20 Hz to 2 Mhz

Appears to be new in box $50

ICOM IC21A 2 Meter Transceiver 24 channel with xtals
including DV-21 Digital freq generator for cont coverage 146 to 148 Mhz
Transceiver works very well transmitt and receive
Digital generator has intermittent output of 18 Mhz transmitter drive
receive output ok

With all bools and diags. $50

Swan 500CX 3.5 to 30 Mhz SSB Transceiver with 117CX power supply and VOX
unit
500 watt PEP so the book says looks very good no dings or wear marks
Works OK

with all books $200

Clegg 27B 2 Meter Transceiver with Clegg 20 Amp 12 volt supply and Clegg
Mike

I just located this one (this is the second one I have found in his
stuff)

Very good condition with all books $75

Simpson Model 260 VOM with Model 150 AMP-CLAMP Adaptor
Clamp on Amp Meter goes from 5A FS to 500A

Both items are orginals and in very good condition

with books $85

Orginal VIBROPLEX KEY Do not know just how old but has old style paddles
and I have seen it for past 50 years SN 159005

Chrome model no rust with 2 very tiny chips in black crackel base
about the size of a pin head

$75

MFJ Model 442C Keyer Bencher Style

Very good condition and works fine $50

All equipment is sold on a as is basis and I will give you all the info
I have about it. Equipment is sold FOB Santa Maria CA and buyer pays all
UPS Shipping.

Equipment is sent UPS Ground COD CASH or Certified Funds.

Equipment was the property of my Father W9PRS now a silent key and I am
disposing of it for the estate.

Surplus Standard 19 inch equipment enclosures. These
enclosures have never been used !!!!!! (still have shrink
wrap on them Mounting space:19" width(horiz. mounting space)
x 70" height(vertical mounting space) x 24" depth.
Good for many types of rack/shelf mounting applications such as:
Test equipment
Cellular and paging equipment
Data com/server equipment
and many other applications
These are very well built Enclosures (cabinets) with several features,
$329 each compare our prices to new prices. Go to http://www.flash.net/~lhix
for features, and specifications.

5141. Control head for FT-4700 RH

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-20 00:00:00 UTC
From: Neil Hartman <nsh@pipeline.com>
Message-ID: <6ev7pm$e0j@camel15.mindspring.com>
Source record: 149799

After having my car vandalized twice about eight years ago I have had the control head of the FT-4700RH stolen. I have two perfectly good main units and need one or two (pressing my luck) control heads. My understanding is that yaesu will not supply the control head only.

Anybody have any input.

Please reply to nsh@pipeline.com

For sale ****** $750 USA Wg Condition /new $1990/

2.Wavetek Satellite Receiver Test Set model 1470
********* 850$ Very Good Shape /new3100$/

Specification:
Avcom Portable Spectrum Analyzer PSA-35A
RF input 10-1750 Mhz
RF input 3.7-4.2 Ghz
LNA/BDC PWR +18VDC on RF Inputs
Referance Level 0-(-40)dBm
5-slide band select 0-500,270-770,950-1450,1250-1750,3700-4200
6-Preset frequency band
span 0-50 MHz/DIV
scale dB/DIV 2db and 10 dB
Line and Bat operat

Frequency Coverage 10-1750 MHz 3.7-4.2 GHz
Basic enough to begin with - sophisticated enough to grow with .
Ku and C band compatible
Built-in DC Block and Power for LNA's and LNB's
Accurately measures wideband signals commonly used in the satellite
communications industry
Lightweight (17lbs.) and Portable - Ideal for Test Situations
Rugged, Attractive Styling
Made in the U.S.A.
New Priced
at /$1,965.00/in http://www.fotronic.com/avcom/psa-35aspecanal.htm.

Troubleshoot system problems by observing output signals from LNA's,
BDC's, Line Amplifiers and Splitters, and other RF signals components.
Measure block system signals balance.
Identify and resolve terrestrial interference problems quickly
and precisely by displaying offending signals on the PSA-35A.
Customers can be shown the nature of TI problems for clearer understanding.
Measure and document satellite communication system performance after
installation or service. Customer should be given a copy of results per
AVCOM'S SASAR (Spectrum Analyzer System Analysis Report) to insure
customer confidence and satisfaction.

Progressive Satellite Communication Dealers, Repair Centers,
and Manufacturers will find AVCOM'S PSA-35A Spectrum Analyzer
to be an indispensible instrument for rapid testing and alignment
of satellite equipment. Problems that might otherwise take hours,
even days to resolve, can be identified and corrected in minutes,

saving time and money, while reinforcing customer good will.
An AVCOM Spectrum Analyzer will pay for itself quickly.
My price **** $950 USA

I have two (2) Sony Pro-80s for sale. They are both in excellent
cosmetic and electrical condition. Each comes with the original
manual, VHF adaptor, leather carrying case, battery holder, nicads,
and antenna. Would like to sell for $175 each + actual shipping cost.

For those unfamiliar with the Pro-80, here are some basics:

* Handheld battery operated unit
* 40 memories in any combination of sw/am/fm/vhf freqs.
* 3 scan modes.
* Am narrow/wide mode
* Fm narrow/wide mde
* Upper/Lower ssb mode with knob adjustment
* Fine tunning control
* Tone hi/low
* Squelch/auto squelch adjustment
* Frequency coverage from 150khz - 30 mhz
* Also covers 115.15 - 223.00 mhz with included VHF converter.

Maybe it is not as bad as it seems.

Granted computer systems fail but one advantage of the PC
world is that reliability is high and most of the pieces that do
fail can be replaced the same day if you live in a big enough
metro area (or within 2 or 3 days if you don't) which beats
having to send your PC back to a YaeComWood for 6 weeks
to be repaired.

As far as compatability goes, I suppose that the source code
for the distributed control software is proprietary to Kachina, Inc.
but I believe that the interface spec is open. If so, anyone with
desire and time should be able to write code to control the Kachina
system, perhaps good enough to sell as a competing software
package to Kachina's. This also means that the control code can
be ported to other existing operating systems as well as future
systems. The radio itself is independent of the OS running the
control software.

A bigger concern may be the hardware interface between the
computer and the control head (that fits in the disk slot of the
PC cabinet). I believe this is RS232 which should relieve any
immediate concerns. And, even if the RS232 interface disappears
from the PC in the near future and your new computer only
supports USB or somesuch, all you would need to replace is the
control head (or maybe just a board in the control head) plus

acquire a new copy of the control software.

The big advantage of a computer based system like the Kachina is that you free the radio from a physical shell that adds cost and limits adaptability. At least for some period of time in the life of a computer based system you should be able to upgrade the system on a module basis. Instead of sending your whole rig back to the manufacturer for an upgrade (assuming that would even be possible) and being off the air for weeks, you would order a new i.f. module or a new dsp module or whatever. When the part arrives, you swap out the old for the new, load the new control software (included with the part, of course), and you are back in business with the latest and greatest.

I suppose what could be is not always what will be but the computer based systems like Kachina look like a big step down a new and really interesting road for ham radio.

Mike W5FTD

Haven't ever tried to page someone, although enabling paging does
produce a whole melody of DTMF-codes being transmitted. As I'm not at
home at this moment, I can't look into the manual to find out what the
PAG L key does...

I think I'm not that kind of a poweruser :-)

>> stuff on 800 mhz is this true?

Yes it can. You should cut the green wire behind the CTCSS-'door'.
Then, to enable 800-999MHz go to VFO-B and press Function-Power or
Function-Band (one of the two buttons at the upper left front side).

Have fun!

Rob B.

PS I'm not sure 800-999 will work in the American version, I have the
European one (TH79-E).

> I was thinking of all the timber framed houses.
>

Woodshop is not the same as learning all the government laws, building codes and permits needed to build a house. Besides, not many people have the time to build their own house, nor want to do that for a living. Again, teaching how to balance a checkbook, or filling out a tax form (instead of having to go to H&R Block) would be more practical as this is something EVERYBODY can USE.

Uniden Bearcat Handheld Scanner

Features: -New NiCd Battery Pack
-(1) VHF Rubberduck Antenna
-(1) UHF Rubberduck Antenna
-Earphone (extra length)
-Wall Charger
-Original Case

The radio has had some use and I'm proud to say, I've taken good care of it over the years. Everything works perfectly.

I'm asking $100.00 for this beauty. It is a very useful radio and will give you more years of quality scanning.

Please EMAIL me or CALL me at (305)895-4355 between the hours of 10:00am & 9:00pm.

73,
Bill

Sure! I have yet to use any of THAT information in the real world YET!
Besides, I find out now, that all the "history" from school was WRONG
anyway! And they forget to tell you the GOOD stuff that the government
would rather we didn't know!

Does not seem applicable
> to someone who want's to be a nurse, is it really necessary for a brick layer to
> have good grammar, perhaps he could bypass english class. Good math skills would
> not necessarily make a good Crisis Intervention Counselor. What exactly could we
> teach that EVERYONE would use?

How to do your own TAXES (EVERYBODY has to file) How to balance a Check
book, How to go through all the legal crap of buying a house, etc etc.

We could also replace "History" with "Current Government" and explain
what kind of laws are up to be passed, and what can be done to prevent
them as, unlike History, this will affect our future and is something we
can change.

>

Great, but when did the other 99% of the class use it? How to do your
own taxes would be good for EVERYBODY, not just those interested in that
specialized trade.

These sorts of things can be taught in colleges or trade schools, but
MANDATORY school should teach things people can USE. I have yet to use
any of "dodge ball" or "how to worship the american flag laws".

5173. Radio I saw on movie

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-20 00:00:00 UTC
From: Leon Rawls <suzuki@inetw.net>
Message-ID: <3512579A.FF70C6D6@inetw.net>
Source record: 149889

I was watching a movie that was about the 2nd civil war if that was the name. It was about a news station that covered what was happening. They had a radio that fit around the ear and had no wires to it it had a small antenna on the unit and I guess it picked up the voice through the ear. because it had no mic. Is this a real radio or just a movie prop. and can you buy it??

5174. FS: Kenwood TS430S HF rig $300

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-20 00:00:00 UTC

I have a Kenwood TS430 S HF rig for sale. General coverage with WARC.
100 Watts.
Includes hand mic and operator's manual.
It has one problem, which is the documented power output problem.
Ever now and then, it would drop its ouput power to about 5 watts.
After a little while, it fixes itself.
I don't have the time to fix this problem.

I'm selling this AS-IS for $300 + shipping from Los Angeles.
Please call me at 818-882-0101 or email to jerw@usa.net
Thank you.
Jerry Wang W8UPP formerly KE6UUX

below are the documents that describes the problem and fixes.

Hi there !
As anticipated, I repost all the answers that came to me about TS-430
power
fault. Thank You Very Very Much to everybody who sent suggestions and
proposed
solutions to the problem. I will open up the radio as soon as possible
and
do what suggested.

MNI TNX AGN ES BEST 73 de IK3HUK Diego. ...-.-

Follows my original posting and answers.

>As you read in the subject I have some sporadic but very annoying troubles
>with my 1988 Kenwood TS430s. This is what happens to my gear (and the same
>occours to the rig of a friend of mine):
>

>
>I sent the radio to a laboratory for repair (and friend of mine did the same)
>but they're not able to reproduce the power-fault when the radio is on their
>table. They cleaned up all the relais, but the RTX is still loosing power.

This sounds suspiciously like a problem I had with my 430 on voice.
It
would behave quite similarly, losing power and becoming distorted on
an
occasional basis. There was a well reported problem with early 430's
where the finals were riveted, but not soldered, and the rivets could
eventually develop a high electical resistance, with ensuing power
problems.
This was diagnosed and corrected by Kenwood early, so I doubt it would
be a
problem in a unit manufactured as late as yours. (I bought mine in
late
1984, and it already had a modified PA -- believe me, I checked!)

My problem turned out to be a marginal connection in the internal
switch
on the XVTR jack on the back of the rig. This is the connector with 8
pins.
The switch is integral to the connector and works when the plug is
inserted.
The fix was to insert and remove the plug in the jack several times.
Since
I have done this, my 430 has never shown this symptom again.

I wish I could claim to have deduced this myself, but it was pointed
out to
me by a friend who read it in a snippet from someone in QST. To
whoever
took the time to send in that suggestion, I am eternally grateful.
Hope
this solves your problem, too.
--
Rob Stampfli rob@colnet.cmhnet.org The neat thing about
standards:
614-864-9377 HAM RADIO: kd8wk@n8jyv.oh There are so many to choose
from.

To all Kenwood users:

The 430 has a corresponding problem to the older rigs:
specifically the 520(S), 820(S), 530S, and 830S rigs....

Power drops while running... if this occurs, tighten the screws on the
driver board and IF board.

Had this happen to me and friends a few times...also watch out for the
coax connector on the back...they get loose too...no lock washer on
the
back.

73,
Tom
wb9rxj@uiuc.edu

Diego,
I had a similar problem with a 430. Mine was
intermittent. Finally one cold day [0c] it
became permanent. I traced my problem to an
open via connection on one of the final transistor
bases. This resulted in that device not getting
a dc return to ground. I re-soldered the via to
my success!

I found it by checking dc bias on each final trans-
istor and found one being different in voltage reading.

Good luck,
regards

George Hawkins

Here is a solution I heard of for a problem like yours. Perhaps it
will be of use to you. Luckily, I have not had any problems with my
TS430S. I'm very pleased with it.

Hope this is of use to you.

73 es GL.... Mark KG7JL

KD7EV advises intermittent power output problems on his '430 was
cured by
installing a more conventional nut on the rear panel UHF style
antenna
connector. Apparently a faulty ground connection at this point
caused a change
in the VSWR which affected the sensing circuit and thus reducing the
RF output
power.

I can't find what you're looking at to see a 27% difference. $2466
is 27% more than around $1942, so that's not it. And your 1495
pounds price includes 17.5% VAT (sales tax) so pre-VAT it's 1272
pounds which is say $2112. So I only see around a 16% difference in
the pre-tax retail prices.

There is a cost to getting regulatory approval (CE/FCC) and warranty
and service arrangements and spares set up. In Europe those expenses
will be amortised over a small fraction of the number of sets sold in
the USA. Also the UK set in particular will be different in that it
will be open for transmitting on our 4m band (70 - 70.5MHz) and I
don't know if that just is a matter of jumpers or different firmware
and a totally different model. Does anyone yet know about that?

It's clearly a bit more expensive here, but I think not enough that
it would tempt anyone into getting an unwarrantied set.

Regards,

The demonstrator engines that the dealers have will run at least 50% water. The original Briggs engine with the heated aluminum bubble chamber can burn more. Just contact a rep and arrange a demonstration. I was allowed to put whatever I wanted in it and operated controls myself. Unit was torn down and inspected. No hidden tanks no tricks.....

Date: 1998-03-21 00:00:00 UTC
From: sfine@earthling.net
Message-ID: <6f251h$2bm$1@nnrp1.dejanews.com>
Source record: 149558

I have an Icom SM-8 mic in use with an Icom rig. It has the capability to operate two radios however. Is there any way to wire the second port to operate a Kenwood TS-450? (I don't really care if the up down switches work) I suspect these are two different beasts and it can't really be done. Thanks for any insight. Steve KB2YWP

5192. Re: HTX-202 TX problem

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-21 00:00:00 UTC
From: PC <pcuellar@bright.net>
Message-ID: <6f24iopqn1@cletus.bright.net>
Source record: 149560

Most likely the finals are bad. Happened same way to mine, fortunately it was under warranty. Also, if you use the radio on a 12 volt supply, take the battery off of it. Read a service bulletin somewhere said that if you were using a 12 volt supply and a battery was connected, it tended to overheat the zenier diodes and munch the finals. Problem supposedly was corrected in later models, but don't count on it.

I haven't had a problem but don't leave it on long. Your right it could be
a problem in the heat.

How about a wide rubber band? A 3/4 inch piece of bicycle inner tube might
do it and wouldn't look too bad.

5198. want info on transworld 12 volt 2-30mhz SS linear, 70 in 500 out

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-21 00:00:00 UTC
From: boeing377@aol.com
Message-ID: <1998032118124501.NAA12811@ladder03.news.aol.com>
Source record: 149653

Is anyone familiar with the Transworld solid state linear amp that runs on 12 VDC, takes 70 watts in and 500 out, 2-30 mhz? It appears to need band info (has plug with band select lines) as well as RF and 12 volts. Are these decent amps? Saw one used for $200, cndx unknown. Does not look like cheap CB type stuff, but the mfr (Transworld) is unknown to me. Any info appreciated.

Lot of 10 NEW 14 volt grain of wheat light bulbs. Most rigs use 12 volters. These are 14 volters and put out just about the same amount of light on 12 volts as the 12 volters do. They should last virtually forever once replaced in your rig. This voltage is quite hard to find. Mostly one ends up using 12 volters only to have to replace them again in a short time. I found these at Dayton one year and bought up all the guy had. Lot of 10 grain of wheat bulbs $15 postage paid to you. Email me if interested. Also have some of these up on eBay if you want to play the auction bidding game.

Maybe someone can enlighten me on this subject.
I have an FT50RD and a VX-1R. Both seem to experience low level battery drain when in the off positon.
I've heard there MAY be something going on that causes this to happen, but have yet to get any concrete evidence of what the real story is.
I sent Yaesu and e-mail regarding this question and this was the reply I received:
>>>>>>Hello Rick, There have been a few confirmed reports of excess current draw on the FT-50R, however am unaware of any problem with the VX-1R. If you would like to send the units to us, we will be happy to check them out. We are located at Yaesu USA, 17210 Edwards Road, Cerritos, CA 90703. Please include your purchase recipt to verify the warranty and a brief description of the problem. If you have any questions, please feel free to contact us by e-mail, Fax 562-404-4828 or phone 562-404-2700. Best Regards, John Lynn N6TVN, Customer Service<<<<<<<<
I'm a bit reluctant to send them back to Yaesu because I understand they have an automatic policy to disable cell reception if they find the units capable of such (both can do so).
Does anybody have any thoughts or info about what to do ?
Thanks !
73's
Rick

On my unit, when this feature is active, every time a signal is received a get a bleep tone. Sounds a lot like a cellphone or somehting. I could see myself using this on a simplex frequency. Every time someone calls for you - Ring Ring!

Now, my question si, does APO (automatic power off) time by when it is set, or from last keypress?

I would prefer the latter, If I don't actually use the unit for X minutes, it shuts off, If I use it, it stays on indefinately...

5217. Mod: Alinco DJ-S11 Extended Receive

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-21 00:00:00 UTC
From: pete@iserv.net
Message-ID: <6f144tkmj1@nnrp1.dejanews.com>
Source record: 149672

Hello -

I saw a number of posts for this mod, so I thought I would post it to the newsgroup.

I have made this mod, and it works fine. I have added a couple of other notes, to the bottom:

I'm curious as to what the other jumper may do....anyone know?

- pete n9ssa

From: KPElecServ@aol.com
Date: Tue, 30 Sep 1997 16:33:16 -0400 (EDT)
To: editor@qrz.com
Subject: DJ-S11 mod

The expanded frequencies for the Alinco two meter DJ-S11 is the same as for the DJ-S41 radio. Remove 7 screws in the back case and battery compartment. Carefully separate case halves. Look for very small SMD green resistor jumper at left side near the middle of board labeled OP/CL. Remove for expanded tx/rx. Expanded frequency range is 136.00 to 173.995 mHz.

(There are two pads here, only the one nearest outside of radio is jumpered. Didn't experiment to see what would happen if the other one or a combination of the two were jumpered but this might be the Mars/Cap mod.)

Art, KC7GF

Notes - 3/21/98 - N9ssa

- DO NOT remove the circuit boards from the front half of the case. You will see the jumper in on the lower left side, where the batteries where.
- The unit does not require a reset after this mod is performed.
- TX range and RX ranges differ:
136 to 151.38 TX.
136 to 173.995 RX.
The display will blink if you try to transmit on a higher freq.

Source record: 149678

Just got this new rig yesterday. So far, I'm fairly impressed with it. It's my first dual-receive unit. That comes in very handy for my work.

First problem is most likely trivial, but I'm curious what others though in regard to my fan for the heatsink. I've noticed that when the power comes on at first, the fan budges a little, but remains motionless. If I transmit, the fan kicks in at the higher speed. After about a minute afer I transmit, the fan falls to a very low idle speed. At one point I turned on the unit, and manually spun the fan blade and it started spinning at it's slow rate. Just wondering if this is a problem to worry about and whot do other units do?

Second, I'm having numerous problems with software configuration. I cannot under any circumstances download data from my radio to the PC. However, I can download/upload with my FT-50R HT just fine. So, I know the serial link is good. Anyone else had problems with the software setup for the FT-8500? Programming memories is a royal pain the butt otherwise.

Hey Tom, you did not disappoint me. I was right the first time, I was
just pissing off my time. You seem to have no understanding of the fact
that it does not have a damm thing to do with the internet. It has to do
with what it cost to staff a building in the usa to work on these radios
and to pay the going rate on wages and this is to say nothing of the
cost to get a radio type accepted by ours truly the american fcc. So I
guess I have just pissed off some more of my time but no more in the
future since you just don't seem to have the means of being able to
understand that there are multiple factor at work here. Later dude!!

I have a FT-920 and a FT-890AT both and I have the crystal filters in the 890AT and granted it is an excellent little performer as a receiver but the 920 is still better with the dsp functions. Sometimes we get to wrapped up in numbers. I may have to get my spec sheets out again for the 990 and the 920 but I did not see anything that was earth shaking in the specs when I compared the two, so maybe you can be a little more specific on the numbers that you don't like?

Hi Joe,

It seems the fan motor on mine is the same as yours, if I transmit on 25 or 50 watts it takes a fair amount of time to slow down. Sometimes, the fluorescent light in my study reflects of the blades and you can see it moving slowly, stroboscopic effects!

I haven't tried to connect it to my computer!

I also have the FT-51R and love them both!

Source record: 149685

If you're in Southern California, join me, Julian Frost, N3JF and Gordon West, WB6NOA for On the Air Code Practise, beginning Monday 23rd March, 1998 at 8pm. We'll be transmitting on 144.330 simplex and the WA6TWF Super System repeater cross-link which covers an area north of LA all the way down to the Mexican border.

Gordo and I will take four to six weeks preparing students to take their 5-wpm Novice Morse Code exam. After that, we'll be concentrating on increasing code speed for those that want to get their General Class license and pass the 13-wpm exam.

After the code practise, Gordo will host the "News Behind the News" net. An irreverent look at what's happening in the Ham Radio and Electronics industries... done in a way only Gordo can! :-)

So if you want to learn the code, or just increase your code speed, join us each Monday on 144.330 simplex (or on the WA6TWF Super System, if you are a member!) at 8pm. This is the stress free, fun way to learn code!

Talk to you on the air!

A friend of mine started his vintage Corvette and it ran a little rough.
He gunned the engine a few times and everything smoothed out. A few
miles down the road he thought he was at a BBQ.
It seems that a raccoon had crawled up near the fan belt/radiator to
keep warm. The fan blades turned him into a kabob, and the exhaust
manifold could have used some Crisco. It took a very long time to get
all the pieces out.

Ripped off? I think the price is fair. For 4 radios in one.
Add up what you have for radios that cover the same bands
and tell me your getting ripped off.

How much do you think it will cost to get it over here and with
out any warranty.

Message-ID: <35140c4c.20011842@news.dlcwest.com>
Source record: 149711

Thanks for reading. A friend bought the Polaris Industries PA1 rib and found it doesn't work with his existing cables. Now realize that the radio-side DB25 connector probably isn't wired the same as the Motorola one. Can anyone reply as to the pinouts of the radio-side DB25 connector i,e, GND, BUSY, BUS+, BUS-, BIAS, etc.etc.

Well, may as well throw in the computer-side DB25 if you could.

Thanks again for your time and efforts.

I'm looking for several Motorola Mitrek UHF radio's with the 450-470 band split.
The radios need to be in good working condition. High power units prefered although I could possiblly use a few T44's. Let me know the model number, condition, what accessories if any there would be, price, and your phone number so I can call you.

Thank You
Wayne

The smart shopper can save lots of money by hunting for a bargain.
Internet allows us to share the prices and see where gouging and excess is
taking place.

If you like to list price be my guest!

Internet has really turned retail upside down. In a few min. we can surf
out some pretty good prices. The retailer myth of "support" is more a myth
than ever before. We know more about a product we buy than the retailer
most times. In my opinion in most cases the retailr adds little value.
The hundreds spent buying list price is better spent on overnight mail
returning the device to the manufacter for replacement or repair.

But for every ass there is a seat so buy where you feel comfortable.
Pay what you will. Its your money (or it was).

Go forth and spend!

> Does it really take a rocket scientist to realize that global economy is
> just that, global! If everyone got paid on the same wage scale and paid
> the same amount for goods bought we would not have any reason to, oh
> shit I am just pissing off my time but jeez you need to think about what

>finals in my radio?
>Mike
>

It`s possible that your finals are bad. The way to check is to use a
low current 12 volt power suppy to provide the power at the 12 volt
input jack at the top of the radio. Measure the current on tx. A good
htx202 will put out about 5 watts or more on a 12 volt supply.
A GOOD FINAL should draw about 1.3 amps on tx

I hope this infomation might help you

5254. Regency HR-2A & B Crystal Compatibility

Newsgroup: rec.radio.amateur.equipment

I know I read somewhere that the crystals in these two Regency rigs may not be compatible - true or false?
I know neither is a state-of-the-art rig, but for bang-around simplex and non-toned repeater mobile use they should be fine.
I have a 52-52 pair in the HR-2A I want to put in the HR-2B, neither is working yet and I'm trying to sell the HR-2A and want to make the swap for a different pair before I sell (if they will work OK).

If you have to open the 202 up, check the soldered connections on the PA transistor...they tend to overheat, and thus get lousy..resoldering them may well solve your problem.
Good Luck.

I am the proud new owner of a Yaesu FT-50R dual band HT. I like the fact that I can directly clip on a spare battery to my belt when in the wilderness, because the clip is part of the battery (no case needed). The only problem I have with this is that I wish I didni¿½t have to expose the metal contacts. Does anyone know of a product (a thin piece of plastic) which clips on to this battery to protect the contacts, yet maintains a low-profile?

Please e-mail any responses.
Thanks

Update on Grey Market importers into USA.. I checked into two places that claim they import directly from Japan and Bypass Yaesu USA etc. The prices are the same or more than any of the USA Dealers.Hmmmmm. So much for that route. I will now go back on track and try to find a English speaking Japanese Dealer who is willing to ship Overseas to
USA. Yes, at the Akihabara they sell the USA Version radio as well as the European and Japanese Version. I checked another place and the price was also $1340 for the
Yaesu FT-847 so there is no TYPO on the first Dealers page. I have made print outs of these Web Pages and will bring them to the Japanese Exchange Student to translate the fine print and have him help me contact these Japanese Dealer Direct. I'm sure the Dealer
would LOVE TO MAKE $$$$ by selling many radios to us. I will keep all informed.

> Thanks & 73, DavidC AA1FA

My experience with any I have tried has been bad. However, look for dimmers where the manufacturer at least makes some comment about RFI on the package. Those aren't QUITE so bad. About all you can do is make sure that they are either full on or full off. They then tend to shut up. Of course, a real switch does the same thing and is cheaper. But you can use the dimmer function when you don't need radio quiet conditions.

Good luck and 73, CJ K0CJ

5277. FS- Yaesu FRG-9600 - full 60-950 MHZ coverage

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-21 00:00:00 UTC
From: bush143@postoffice.worldnet.att.net

I have a MINTand very seldom used FRG-9600 which covers from 60-950 MHZ continously in all modes. The radio does not have any nicks, dents, or scratches whatsoever.

Its been sitting in the original box and packaging for about a year. I'm a non-smoker and the radio's never been outdoors. It includes the following:

* Original manual
* Photocopy of service manual
* Mobile mounting bracket and bolts (unused)
* TV video board installed
* Yaesu AC adaptor
* Original Telescopic whip antenna

This is probably the nicest 9600 you will find. Accordingly, I would like to ask for $450 shipped to lower 48 States. Thanks!

5278. FS- AOR 3000A - Unrestricted Coverage

I have an absolutely MINT AOR 3000A. It does not have any imperfections, blemishes, or even dust on it. I am a non-smoke and the radio has never been used outdoors.

There is nothing wrong with this radio. I have way too many and need to sell some to make room for new toys. The 3000A comes with the following:

* Software and computer cable
* AC adaptor
* Original owners manual (hardly touched)
* Telescopic whip antenna

I threw the box out long ago. I would like to ask $800 + actual shipping cost for this radio. Thanks!

Source record: 149744
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.swap,rec.radio.shortwave,rec.radio.amateur.equipment

I have a beautiful 400 channel handheld scanner. Its the 2500XLT in its original box. It even has the original manual and warranty paperwork. The radio is the early model with full coverage but has been unmodified.

There are no scratches or blemishes on this radio. I am a non-smoker and this scanner is very seldom used because I have many others that I play with, such as Icom R-10, AOR-8000...

This radio has been sitting in the box in my closet. It comes with the following:

* Original leather carrying case (unused)
* Two Uniden battery packs, extra one purchased new with the radio.
* Original manual
* Original rubber antenna

This is probably one of the nicest used 2500XLTs you will find. It has not been modified at all, and is the earlier version capable of unrestricted coverage. I would like to ask $300 for it. Thanks!

>have yet to get any concrete evidence of what the real story is.

Depends on what you mean by "low level". The FT-50 normally draws some
current from the battery when it is turned off, but the current is well
below 1 mA. This probably drains a battery less than its own self-discharge
rate.

However, some FT-50 owners have noticed currents of 8 or 10 mA when the
radio is turned off. This will discharge a battery in a few days.
Yaesu knows how to fix it (change the value of a few parts in the power
button circuit).

So, to confirm that you have a problem, measure current drawn by the
radio when it is off. If it discharges a battery in a week or less
while turned off, you definitely have a problem.

I don't know of an equivalent problem with the VX-1R. How long does it
take to discharge a battery?

Dave

You can Use an Earphone as a Microphone, Radio shack had a Set of 49
Mhz radios that did this very thing, and they sounded fine, I guess
this type of equipment that you are refering to could be manufacturd
today, but I have no idea who would make such a thing, But yes you can
use a earpiece as a Speaker/Microphone , Your voice resonates up your
jaw bone (short version)

5284. Minitor III (three) survey

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-21 00:00:00 UTC
From: pwserctr@aol.com
Message-ID: <1998032116514000.LAA29466@ladder03.news.aol.com>
Source record: 149748

I would like to take a survey from all the Minitor III (three) dealers. As you may know Motorola has not made available any schematics or part numbers for the Minitor III pager. And as far as I know they do not plan on releasing them (if I am wrong please let me know). We are considering reverse engineering the Minitor III pager in an attempt to provide a schematic.

Here is what you would get.
1. A schematic of the pager, receiver and decoder board
2. Complete diagram of all the parts on the board
3. Motorola part numbers for most of the components. (most of the surface mounted components are a standard value and used in other pagers so Motorola stocks these parts but currently you have no way of knowing the numbers)
4. Some parts are unique to the Minitor III so there would be no way of getting them

I am just taking a survey, not trying to sell anything. Please respond with a Yes you would want it or No you would not, with any comments.

thanks
e-mail : pwserctr@aol.com

My 8500 hasn't arrived yet. Soon, I hope. But it is supposed to be
a thermostatically controlled fan. The drive circuitry is probably set
up to supply just enough voltage to keep the fan running when the heat
sink is at room temperature. So if it's stopped it stays stopped, but
once you "goose" it it continues running slowly. Doesn't sound like
a problem to me.

>Second, I'm having numerous problems with software configuration. I

What software are you using? The 8500 needs ADMS-2, while the FT-50 uses
ADMS-1. Do you have both?

The round emblem indicates a later series of radios. FYI, another
indicator is whether its an "MCM" chassis or not. The MCM number will
be stamped on the chassis top.

I had similar problems, with three CPUs, two monitors, and a host of peripherals and emulators. (interference^3)

Since I didn't have my usual first choice solution (don't make noise!), I had to apply sheilding and supression. In order to apply this so that it works, Think in terms of optics. Your PC makes noise, and it's sitting in a metal box. In the optical world, you have a light in a mirrored box. The metal REFLECTS signals, it does not absorb the signals. Since the noise is already made, you have to give it somewhere to dissipate harmlessly.

#1: Use FCC certified enclosures. They DO exist. I pay about $79 for mine.
#2: Mount a square of MOS-Foam in the enclosure, where it won't touch the boards. As large as possible. I use the raw sheets from Digi-Key, and cut to fit. (This is the stuff you stick chips in)
#3: Ferrite all power cords, where the equipment may use a switching power supply.

The above three steps make sure the box is RF-tight, and that the radiated noise has a place to dissipate, rather than just bounce around till it finds a way out. The ferrites are lossy at 100kHz+, and accomplish the same effect on powerline conducted noise.

Once the above is done:
#4: Use your RX as a "sniffer" with a small loop antenna at the end of 12' of coax, and search out the remaining emitters. Ferrite as needed. Mouse and keyboard cables are commonly noisy.

#5: If needed, ferrite your antenna cables, to keep your noise from traveling up the shield to the antenna, and back down. It will!

With this approach, I've tamed my office/shack so that I have my noise down from +9 to barely noticable. It gets a little bit higher near the bottom of the AM bcb, but that's because the ferrites I got weren't optimal down there.

While some suggest using transformer ferrites, I would reccomend against it, since they are designed to have low losses, and that's exactly what you DONT want. It would be better than nothing, but not much.

5298. Street Prices in Japan? WARRANTY

How true.

I checked Friday out of curiousity and our service department currently has eleven ICOM radios in for service which some clever people purchased outside the U.S. and brought in.

I believe all of these would have been warranty if they had been purchased domestically. We will not be able to charge any of the repairs to ICOM under warranty, which is many hundreds of dollars of repair bills we otherwise would have charged to ICOM instead of the owners.

It's a roll of the dice on service. If you're certain you will not need warranty service, then go ahead and buy overseas, but then don't whine to the service places when they can't put in a warranty claim for your new whatever. We give the owners every break we can, but we have a contract with ICOM we have to observe on warranty repairs.

One repair bill you have to pay for out of your own pocket will cost you more than you saved buying overseas. Maybe a lot more.

The newest models are the ones most likely to need service. If you buy an early production anything, you are serving as a guinea pig. Unless you have a warranty, this can be expensive.

Hello All.
I have a 10(10/11) meter amplifier which I would like to find some info about. The only markings resembling a model number say TX 250.... has switches for on/off, preamp on/off, am/ssb, and hi/med/lo. I am assuming it was made for sale in another country or was homemade from a commercial print. It does have what looks like a serial number inside of it.
Any info would be appreciated... Thanks.

Message-ID: <3515B97E.84DCB017@ix.netcom.com>
Source record: 149520

Personally, I find this an interesting radio, and may eventually buy one
-- to replace my TS-570D, TS-60S, and TM-255. OTOH:

Does anyone else find it strange that what appears to be a base radio
is tunerless, and has an optional tuner which seems intended for mobile
operation (only)?

Am I missing something? Is Yaesu going to come out with an FT-847AT,
right after lots of folks buy an FT-847??

Phil

Whats the point of covering the front contacts? theres hundreds of radios
with drop in charge contacts that are always exposed... in fact, the 50r
has a set of those charging contacts on the bottom. no need to worry, the
chances of something actually creating a bridge.

Source record: 149523

On 22 Mar 1998, Dave Martindale wrote:

| My 8500 hasn't arrived yet. Soon, I hope. But it is supposed to be
| a thermostatically controlled fan. The drive circuitry is probably set
| up to supply just enough voltage to keep the fan running when the heat
| sink is at room temperature. So if it's stopped it stays stopped, but
| once you "goose" it it continues running slowly. Doesn't sound like
| a problem to me.

I agree. Since the heatsink never even gets warm while sitting in receive mode, I'm not going to worry about it. It sufficiently cools when I start trnsmitting.

| What software are you using? The 8500 needs ADMS-2, while the FT-50 uses
| ADMS-1. Do you have both?

Yes, I have both. I just tried a 2nd computer (my roommates laptop) and could not get any data to pass. Could be a cable problem. Going to see if the vendor can ship another one to me. If that does not fix it, I'm looking at a bad interface on the radio--ugh!

Hi all,

I have for a friend the following radios:

You may email me or call him at (304) 855-4678.

Ten-Tec Omni A HF rig with matching external VFO, Vintage hand mic :) and operators manual for each item. Radio is solid state with analog dial (NO TUBES!!) Sent to Factory in 1990 for a checkup and tune-up (have documentation on that) Radio was purchased new in 1979 and has worked like a champ. 160-10 meters, 3 cw filters, ssb filter, full break-in QSK. VFO allows rx of 2 freqs. simultaneously, tx/rx from radio or vfo or vice/versa. Also in vfo are 4 crystal slots for fixed channels. runs 100 watts on 12vdc using 16amps for full output! Radio is a 9 out of 10..
PRICE IS $400 SHIPPING INCLUDED.
Will trade for the following:
Prefer solid state radio!!
Yaesu 757GX
Kenwood TS820/TS830/TS530, or similar. (looking for something with DIGITAL DISPLAY, IF SHIFT and NOISE BLANKER) with vfo or speaker or whatever... let me know what u have (excellent condition, please!!)
thanks,
Randy

5313. FS/FT: Icom IC-W21AT dualband HT $125

Hi again,
Have for sale for a friend the following radio:

IC-W21AT handheld dualbander. Includes speaker/mic, veh. power cord, hi and low cap. batteries. HAS INTERMITTENT TX AUDIO PROBLEM.. it transmits fine, but no audio sometimes. Audio cuts out with no rhyme or reason, but we suspect the speaker/mic jack as the culprit. this is the radio with the 'telephone' whisper mode so u can hold radio like handheld cellular phone. it has a mic in the radio and another mic in the battery pack for this purpose. the radio works great with dual in-band rx, cross band retransmit and rx, lots-o-features for Mr. Fix-it. PRICE IS $125 INCLUDING SHIPPING

Will also use this as 'boot' for the other radio trade (see ten tec ad)
will also trade for a 1kw (rated at more than 600 watts) antenna tuner, prefer roller inductor tuner like a MFJ tuner or a Dentron Supertuner.
Wish list: prefer Drake Model MN-2700 tuner.
please email me or call Slade Sowers at (304) 855-4678
thanks,
Randy

Are you sure receive is O.K.? Due to their age, some 3210H experience
failure of tantalum capacitors in UHF PLL circuit. Sometimes PLL unlocks
only in transmit. If you can detect a transmit signal on a nearby receiver
(but no detectable power output) your radio has a bad PA, possibly bad power
module. Otherwise, you have bad tantalum capacitors near UHF VCO. I believe
they are labeled C87 and C97, but am not sure.

BP173 is 9.6V battery, and it will give you full power when used with T7A (4W) and W32A (5W). BP180 has lower voltage, and W32 can put out about 3W with it.

5327. Yaesu FT-50R Question

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-22 00:00:00 UTC
From: Jeff Fongemie <fongemie@mountainguidesalliance.com>
Message-ID: <3515d745.0@news.neis.net>
Source record: 149543

Hi All,
I'm just getting into this Ham Radio stuff and I just bought a Yaesu FT 50R radio. The sub display can show the battery voltage, but in doing this mine shows 10+volts when charged and the radio quits way before the 4 volts like the book suggests. How can I have a reading of over 10 volts when my battery is only 9.6 volts?

Also, how are Ni Cads? Do I need to fully charge and fully drain the battery when using?

Any recomendations for a good antenna substitute that is still fairly small?

Thanks,

Jeff Fongemie

I replied to you the same day you left this message, but it never made it to
the server. You can't get more than 10W on 2m with 706.

Adnan, Icom America

Anyone remember who it was that posted a Motorola
Test Set equipped with the two cord MICOR test
cable assembly? The set (or cord with the RED and
WHITE plugs) for aligning mobiles?

If not, do *you* have one for sale, or know where
one might be located? (Test Set -OR- cable?)

Thanks very much
John

5336. Re: FT-847 Price is Dollars

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-22 00:00:00 UTC
From: fishbags@aol.com
Message-ID: <1998032200451800.TAA16534@ladder03.news.aol.com>
Source record: 149570

The cost of shipping and duties from Japan or elsewhere in the world to get a grey market Ft-847 that would have no USA warranty of any kind seems silly and foolish just to try & save a hundred or two on an almost two thousand dollar item. Imagine if this brand new model was D.O.A or had an operational quirk right out of the box. You would be assured a $100-$300 repair bill. People complain that there aren't enough places in the US to go see & buy hamstuff, yet this attitude would chase the rest of the stores out of the country. I wonder if this guy would try to beat Sears out of $200 for a $1880 lawnmower by having it shipped in from japan with no warranty. Sorry but doesn't this seem "Rube Goldberg" type silly to anyone else???

I just checked on shipping a 145lb, 15x15x20 inch box from NY to NH, the rates vary widely, FedEx $95., RPS $53., UPS $65.
If we all did more shopping around for price we might have a tiny impact on driving prices down a little!
Here are the urls:
FedEx: http://www.fedex.com/us/rates/
RPS: http://www.shiprps.com/rrr/rrrmain.htm
UPS: http://www.ups.com/using/services/rave/rate.html

5343. *RS HTX-100 Speaker Audio Probem, please HELP!*

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-22 00:00:00 UTC
From: teenham@aol.com
Message-ID: <1998032203532700.WAA19475@ladder03.news.aol.com>
Source record: 149577

Hey there...

I have Realistic HTX-100 10 meter mobile. The problem is the following: I cannot control the volume on the radio. It doesn't matter where I set the Volume knob, the sound is always very low from the internal speaker. I have tried headphones and same problem. The only way I can really hear the radio is if I connect it to an external amplifed speaker (if it's not amplified the sound is same as it is from internal speaker). The RX and TX fine, and all controls work fine. Any ideas? I do have the schematic for the radio, but don't know where to even start to look. Any input on this subject, or on the HTX-100 in general, is very much appriciated. I'm hoping to upgrade to Tech Plus in May, and really want to get this radio fully working, so PLEASE HELP!! Thanks.

What do you do about adhesive residue? On particularly hot days this could become a guncky mess. Not trying to shoot you down Mark, but I have not had good luck with electrical tape coming off cleanly (maybe I'm buying too cheap a grade :-}).

Try some stretch wrap made for wrapping foodstuffs. A small patch that wraps partiall around the case might be the ticket. No residue and quite reusable. You might be the brunt of a few good natured jabs, but you will not short out your battery pack inadvertantly. Which, by the way, is made tougher from the get-go as Yaesu was smart enough to recess the contacts.

Hope this helps.

5359. Wanted Analog Satreceiver !!

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-22 00:00:00 UTC
From: Cees Brommersma <pa3fce@bigfoot.com>
Message-ID: <890570238.285260@guust>
Source record: 149593

Hello there,

I (Cees) am looking for a Analog satellitereceiver.

The reciever must have the following spec's:

1) Analog receiver
2) Freq-range 950 - 2150 Mhz
3) C-Band receiving (Video inverse)
4) Video different I.F Bandwidth's (not a must)
5) Audio frequency's left and right independently tunable
6) 2 LNB connectors (not a must)
7) Menu on screen
8) 200 memory-canals or more.

If you have or know something Please let me know !!

Bay bay <> Cees <> Holland.

5360. Re: Icom SM-8 mic with Kenwood HF?

> Thanks for any insight. Steve KB2YWP

I'd say it could be done without too much trouble, but you will need
to supply the DC bias voltage to the electret insert while you're in
the Kenwood position. Maybe you can keep the Icom rig running and
bridge that line on the change-over switch or maybe use a 9v battery
for the Kenwood position.

If you ask the general question: How to use any Icom mike, even the
the SM-6 or HM-12, with a Kenwood rig I think the same tricks can be
used for the switched SM-8.

Regards,

No, it sounds like a "warble" (sp?)

: > 1. How fast can it burst an image? If I'm mobile an using a repeater with
: > others waiting to talk, is it a 5 second or a 2 minute delay for me to
: > send or

Good question....I suspect that since the resolution is quite a bit less
that the SSTV pictures sent over HF, that it may be quicker than HF, but I
don't know.

Although it's hard to understand why it happens, I have fixed several
HTX-202's that had this problem by resoldering the connections on the
final transistor. This seems to be a common problem if the HT has been
run on 12 or 13v in the hi power position.

5366. Re: Yaesu HT battery drain

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-22 00:00:00 UTC
From: rick1959@juno.com
Message-ID: <6f382oanh1@nnrp1.dejanews.com>
Source record: 149600

Hi Dave,
Thanks for the info.
Battery drain seems to be somewhat inconsistent. Although I would say that it is generally more than a week between charges when they are left off. Maybe there is no problem, just an expectation on my part that a charge should last more than, or at least, a month when they are shut off.
I don't have the equipment (or skill) to measure battery drain, so I'll need stick with the time factor as a judgement.
Maybe I need to "bite the bullet" and simply remove the batteries when I'm not going to use them for a week or more.
The VX-1R seems to have about 2 weeks between charges when off. The FT50 runs anywhere from 1 to 3 weeks when shutoff.
One other thing is I'd heard there is there is a difference in discharge rates for the FT50, dependent on how HOW it is shutoff. For example, one thing I heard is that if you shut it off then turn it back on for a few seconds then shut it off again, there is a distinctly lower discharge rate than shutting it off once. Know anything about this ?
Thanks again for your help.
73's,
Rick

Message-ID: <dgaR.28$PR4.787014@carnaval.risq.qc.ca>
Source record: 149608

I have the following equipment for sale, everything is brand new and still
on warranty for nearly one year. Icom IC-W32A dual band ht with V/V, V/U and
U/U operation, cross band repeater and extended receive without hardware
mod.
It comes with a BP-180 battery that gives 3.5 watts output. It gives you 5
watts with a bigger battery or outside dc power. Accessories include HM-46
speaker mike and CP-12L cigarette lighter adaptor for operation and
recharging.
A check of the latest prices at HRO gives the following:
IC-W32A : $304.95
HM-46 : $ 59.95
CP-12L : $ 36.95
For a total of $401.85.
I will sell the complete kit only for $325.00 including shipping insured by
airmail to your door. Please inquire by email.

From: Ed <emw28@aol.com>
Message-ID: <6f3bc1$g52@bgtnsc02.worldnet.att.net>
Source record: 149609

Hello.

I am looking to purchase a Minitor I or II pager (with charger) with the frequency of 154.070 already in place. The PL tone function and quick-call capabilities are not needed as I would like all transmissions on this particular frequency to come through.

I would prefer a used Minitor, but would welcome hearing about any new pagers that are at a decent price and can be shipped 154.070 capable.

Thanks for any suggestions or assistance!

Ed emw28@aol.com

Allright. Does anyone know the internal mod that unblocks celluar and
enables 220 transmit? The dealers have it but they will not release it.
Have seen modified rigs that have this capability. But it is not a
keypad mod,like the extended rx. Thanks in advance,Jim

These are ORIGINAL, they are NOT used. I do not like the wordmint as it implies STILL wrapped in original packaging without touch by human hands. These MAY have a VERY LITTLE rubbing around the edges as they are paperback and have been on the bookshelf and have been moved from shelf to shelf on the odd occasion.

I don't have any objections for buying the radios in Japan, but here
are some tips you want to consider:

In Japan...

- Some rigs only transmit 10W HF or 50W HF. 10W HF for no
coders and 50W for 5 WPM JA operators. The most rigs sold in Japan
are either with 10W or 50W capability... not many with 100W. Make
sure you get the one what you want...

- The band allocations in Japan are completely different from
the ones in North America. ie. 144-146 MHz for 2m, 4630 KHz CW,
7000-7100 Khz etc. ->
http://www.radiotelephone.net/amateur/intl.htm for more info.

- The warranty for the radios which are bought in Japan are
"usually" valid only in Japan (not outside of the country).

Message-ID: <1998032217333801.MAA07556@ladder01.news.aol.com>
Source record: 149626

I have two ICOM SM-5 desk mics for sale:

- Preamp mic for older IC-730, 740, and others
- Original box and manual/schematic for both
- Both work great and have the 8 pin Icom plug

- One is in excellent condition with no scratches for $55 shipped

- Other has minor scratch on base and has the first ring of the flexible gooseneck slightly disjointed. Flexible neck still works fine and mic looks good but not as nice as the other one. $40 shipped.

5397. Re: FT-847 Price is Dollars

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-22 00:00:00 UTC
From: dirtmeat@aol.com
Message-ID: <1998032218575800.NAA21395@ladder01.news.aol.com>
Source record: 149631

This is a stupid argument. No one is getting "ripped off". With shipping & customs duties, the price for a grey market ft-847 is going to be close enough, and why is it such a mystery that it's a little cheaper in the country that it is made in?? I'm sure oranges are cheaper in florida, but are the rest of us that don't live in florida getting "ripped off" everytime we buy them locally? How about ordering a TV direct from Korea no warranty to save some money too? I agree this is a pretty dumb penny-wise, pound-foolish attitude.

I really suggest you to go to a local tv shop who does antenna work or
2-way radio shop. The freight and the cost of tripod will be more than
it is worth. Also depending of the rust condition of it . Mike....

This package goes beyond complete. Check out the list below, both Windows and Macintosh platforms are covered, and all the accessories you could want (well, all the accessories _I_ ever wanted. :-)

Everything is in great condition, well cared for, ready to use. The Zaurus itself is in pristine condition, no scratches; it's lived in the padded leather case all it's life.

I've put the current prices from the Rupp catalog (www.mobilescape.com) rounded up to the nearest dollar) beside everything so you can see what a great deal this is.

If everything was purchased new today this would be over $1000 worth of organizer and extras,.

First $450 offer gets it. If you can't afford $450, send me your best offer, I'll consider it. Please don't send me offers on parts, I want to sell this as a bunch.

So what's it include?
Zaurus ZR-5800: 2MB RAM, Modem, Backlight, Spreadsheet, Compuserve link, Addresses, Notes, Calendar, etc. ($400)

Two Cases:
Deluxe leather case ($60)
Soft Naugahide case ($10)

2 PC connector cables ($50 each)
1 Mac connector cable ($50)
1 PC Infrared connector cable ($90)
2 AC Power supplies ($15 each)

1 MB PCMCIA Card (~$130)

Oak desk stand and stylus ($50)

Zaurus link software PC ($15)
Zaurus link software Mac ($15)

Game Pack: Poker, Othello, Mastermind ($50)

Extra (Damaged) ZR-5800, for spare parts(?) ($???)

Back-Issues of Digital Ink magazine - Tons of Zaurus use tips. (Year's subscription was $30)

5404. FT-Manager CAT SW for Yaesu

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-22 00:00:00 UTC
From: Laurent LABOURIE <llabourie@nordnet.fr>
Message-ID: <6f3oi6$iv6$1@news.nordnet.fr>
Source record: 149638

Hello

I uploaded FT-Manager V1.4, latest release of my Windows 95/NT software
optimized for Yaesu rigs (shareware).

FT-Manager V1.4 now supports :

YAESU FT-757/767/840/890/900/920/990/1000MP/D
Including : full real-time monitoring, Web cluster, Log-book, band scope,
Short Wave data base, rotator control ... and fixes...
To download at http://ourworld.compuserve.com/homepages/f6dex

I am waiting with impatience the Yaesu FT-847 and the ability to interface
PC & TX
at 56000 bauds ! (only 4800 bauds for other transceivers).

Soft990 MS-DOS SW (freeware) always available for
Yaesu FT-840/890/900/920/1000MP/D

Best 73 - Laurent F6DEX

The next advent of scanners will be DSP. Think of a CD player. About three chips: DSP, filter and amp. A reconfigurable receivers are now just hitting the market (Icom PRC-1000, WinRadio). This could be shrunk to handheld size. Four or five chips: RF amp, IF amp, DSP for detection and filtering, and AF amp plus an embedded microprocessor to run it. If you knew how the transmitted signal was encoded and how to program that particular receiver, you could decode anything. Plus add new features at will. Which is why we have not seen DSP modems as it would move us from buying boards to software for new modes.

Purdue is pushing DSP training in both EE and EET. Much of the old hardware hacking is gone. Even logic circuits are now programable chips. DSP has become the standard for front ends of broadcasting audio, CDs, video, telephone filtering. It is everywhere.

How are they going to stop us when we can build a reprogrammable, reconfigurable receiver?

5409. computer-generated RFI

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-22 00:00:00 UTC
From: r.s.eckman@larc.nasa.gov
Message-ID: <slrn6hasd9.8vh.r.s.eckman@eos1.larc.nasa.gov>
Source record: 149643

I'm having a problem with computer-generated RFI getting into the rig with strong interference at a number of places on the HF bands, making DXing extremely difficult. I'm sure that others have discussed this in the past, but I've not found a recent reference to the problem.

Basically, my computer (a Pentium 133 unit with a 15" Mag monitor) is located on the same table as my HF rig. When the computer is on, loud (S9+) noise is present on the HF bands at various discrete frequencies. I tried plugging the rig into a distant AC socket (several rooms over with an extension cord), but the problem was still evident. I tried several other permutations and then thought to disconnect the video cable. Almost all of the noise disappeared. So, it's apparent that the noise is being radiated by the video cable and not through the AC lines. I'm still somewhat mystified why the rig is picking up this noise. The cable from the monitor to the computer is hardwired to the monitor (like many inexpensive monitors) and therefore it's difficult to try to install a torroid at the monitor end of the cable. Applying some snap-on torroids at the video card end doesn't seem to have much effect.

I've also verified that I have the same problem with my other computer on the other side of the radio room (which has a Nokia 15" monitor). Disconnecting the video cable elminated almost all interference on HF.

I assume that others have encountered a problem similar to this. Any advice on how to eliminate it? I would really like to use the computer with a real-time logging program, but the noise renders the rig generally unusable when the computer is on.

Thanks in advance.

Richard,

Actually I think you'll find that it is not simply the cable. My
experience has been that it is direct radiation from the CRT.
I have watched and listened as the display scrolled by that
it broke the squelch on my HT about eight feet away.

I am afraid that you will either have to hunt for a tempest
type monitor, or could perhaps place a grounded copper
window screen around/in front of the screen.

If indeed it is wholly the cable, try to find some Scotch 3M
shielded braid. I believe it used to be called Scotch #24 (or #34)
at a local electrical supply store. Wrap it around the cable,
with a slight overlap. It will interlock. Take the other end to
a good ground.

Hi Richard -

I have had the same kind of problems with my Dell computer monitor (made by Samsung), and I was never able to get rid of the interference at the source. I tried ferrites on the monitor cable and power cable, and even shielding the monitor itself with grounded aluminum foil.

But here are two techniques that may help. First, if you are having problems with interference on a specific frequency, you can simply shift the interference by changing the refresh frequency of the monitor. I do this from the control panel in Windows. This doesn't get rid of the interference; it simply shifts it out of the way.

The other solution is something like the MFJ-1026 or the ANC-4 Antenna Noise Canceller. These devices can mix the interference received from the computer on a noise sense antenna out of phase with the signal received on your main antenna, resulting in cancellation of the interference. I use the MFJ-1026, and I can sharply null out my computer monitor harmonics. I don't use this method too often because I use my MFJ-1026 to null out other more problematic noise here (these devices can only work on one noise source at a time).

Good luck and 73,

Matti VE7BDX

I have a TM-741 with 6meters for sale. This radio has been mobile since
I bought it new 5 or 6 years ago and it does show some wear. It has a
minor problem, when first turned on
"PF-1" shows on display, and the VFO, MEM,CALL buttons on the
microphone dont work
After PF-1 goes out, radio works fine. Microphone cord is stretched.
Will have to check to see if I have the box and manual.

On the brighter side I had it on my tech's service monitor, and it still
preforms as per manufactures specs on output power, and recieve
sensitivity.

I am selling this rig "as is" for $495 + SHIP, complete with all 3 bands
6m,440,2m
I will NOTsell the 6m module seperatly unless someone wants to but the
radio as a dual bander for $295 + SHIP

If interested call Bill, WR2M at 973-770-0242 eves and weekends, or
973-584-6550 business hours.

For Sale: Complete Drake B-Line

T-4XB, R-4B, AC-4 Power Supply, and MS-4 speaker.

In excellent condition. Both rx and tx cover 80/40/20/15/10 meters.
RX also has crystals for 160, 30, 18, 12, and 10CW, for transceiving.

Tubes are not new but tx puts out full power on 80 to 15,
slightly less on 10. Will throw in a spare set of finals.
Recently (1996) replaced the high voltage capacitors in the AC-4 supply.

I am the second owner (since 1978) and the rig has only been lightly used.
No contesting. Cosmetically it is very clean (non-smoker) and includes
original manuals.

Best offer over $400. Prefer local pick-up, but will consider
shipping if the price is right.

The radio was made by Kenwood. Kenwood built the same radio for Drake, and
they
sold it under the Drake TR-22C label. Kenwood used to be Trio-Kenwood in
the 70's
and early 80's, and used the Trio name in markets outside the US.

If you can get a couple of students with ham licenses to help out, something like this would be tailor-made for packet radio on 2m or 70cm. Equipment may already be available for loan, or you would need two HTs and two packet boxes, plus associated connections, total cost to you would be roughly half of the commercial product.

Failing to find hams, you could always go to Radio Schlok and get a pair of iternerant-band HTs and do the same thing. A pair of 1w radios would be more than enough to do what you need to do.

For Sale: TenTec SP-325 general coverage shortwave receiver

This is the military version of the RX-325, built under contract for the Navy.

Covers .5 to 29.999. mHz

Digital readout

About half the size of an Icom R71 or JRC receiver

keypad frequency entry

64 memories

Tuning knob

Memory scan and tune

AM/FSK/USB/LSB/CW

Switchable AGC

Includes 3 filters: .5, 2.8 and 6 kHz -- very nice filters

Filters can be switched independently of receive mode

Includes built-in a.c. supply

Include: factory manual (op and maintenance) and 19" rack cabinet adapters

Radio is in truely excellent condition and works like a champ

$375.00 plus UPS

Thanks,

David, WA7ZYQ

Hello,

I am selling my Kenwood TM-742 which includes: triplexer; triband antenna; DFK-4 remote kit.

Band included: 2 meters; 70 cm. and 1.2 ghz

This was my XYLs radio. She almost never used it. This radio is a year old with very little use.

I am asking $800.00 OBO for the entire set. I have manuals and original boxes etc.

I will trade for a used Icom IC-706 or a new Alinco DX70TH. Page me at (702) 668-2259 Interested parties only please.

Is the radio already configured for full-duplex operation? I.e. can you
transmit on one band and receive on the other simultaneously? For this
to work you need at least:

- one VHF and one UHF frequency selected

- both bands turned on

- DUPLEX mode set

In particular, check the DUPLEX setting. I normally have it turned
off, since I don't *want* to hear one band when I'm transmitting
on the other. But for cross-band repeat, it seems it must be turned on.

>> Yes! Comet SMA-3! It costs a little more, but the performance is much
>> better than the stock antenna. Very flexible too.
>
>What do you think about the SMA 503?

I have both. The SMA-3 seems like a slightly better antenna in the ham bands than the 503, but both are much better than the stock antenna. However, the 503 is now on the radio virtually all the time. The extra convenience of the very flexible whip (no more antenna poking me in the ribs or armpit) more than makes up for the possibly slightly lower performance.

All of the above applies to ham bands only. I seldom use the radio even for receiving outside the bands. The SMA-3 does have a reputation as a good antenna for wideband use, and it's rated for 900 MHz transmit as well as 146 and 440. The SMA-503 is rated for transmit on 146/440 only. However, Comet rates both as usable for receiving 118-160, 250-290, 360-390, 420-470, and 820-960 MHz.

From: spammers@must.die.com
Message-ID: <wsandersEqAA0v.8qA@netcom.com>
Source record: 149403

Was there ever an AM filter provided by Yaesu? The manual for my FT101E shows the empty filter positions simply bypassed by capacitors, and mentions no AM filter. The 101E shipped with the 2400 Hz SSB filter and the CW filter was the only option I knew of. Of course there could be 3rd part filters..

At those prices, no. But DSP, in large production runs, is much
less expensive than hard wired boards. I have telephone switching
circuits done in DSP that are even cheaper to produce in mass than
op amp filter (RC) circuits. Different tones are loaded into data
tables, no adjustments needed (that is most of the cost savings).

Brand New Portable Antenna Analyzers for sale.

Active VSWR meter giving direct readings of both
VSWR and % reflected RF power. It is designed to
check the exact resonent freq. of any antenna, HF,
VHF & UHF.
It has a 4 digit freq. counter and an analogue
meter, with a switch for 2 freq. ranges and 2
knobs for freq. adjustments, Fine & Coarse.
It has major advantages over a standard VSWR meter
in that it sees the antenna system exactly as the
Transmitter sees it, plus the frequency is swept
to see where its resonating. Makes trimming so
much quicker and easier !

For further info E-mail RTE
at rte@nis.za
or call (011) 882-9182 or 882-0762
or Fax 882-9182
Johannesburg.

RTE also buys, supplies, rents and repairs Comms.
Monitors plus all sorts of Test Equipment.

Linear Amps also available ! NEW 2 - 35 W

Visit my Web Site !
Just bouble click when your browser is running !

Seems that years ago when I was HV research, we used sulfer hexaflorine.
Iif I spelled it right) Funny stuff, fill a balloon with it and the
belloon just 'plops' on the floor. Anyway, we used the gas in probes and
spark gaps to control arc points and insulate.
Have fun!

On Sun, 22 Mar 1998, Jeff Fongemie wrote:

| I'm just getting into this Ham Radio stuff and I just bought a Yaesu FT 50R
| radio. The sub display can show the battery voltage, but in doing this mine
| shows 10+volts when charged and the radio quits way before the 4 volts like
| the book suggests. How can I have a reading of over 10 volts when my battery
| is only 9.6 volts?

Very normal. Actually, my batteries indicate 11.2 when they're pulled
fresh of the charger. At about 6.0V it starts to drop off rapidly.
Finally, at 3.5V it dies.

| Also, how are Ni Cads? Do I need to fully charge and fully drain the battery
| when using?

Periodically. Definitely don't leave it in the charger for several days.
Do try to drain the battery before recharging when convenient. If you get
a rapid charger, make sure it's an 'intelligent' charger--make sure it
prevents overcharging the battery.

| Any recomendations for a good antenna substitute that is still fairly small?

Yes! Comet SMA-3! It costs a little more, but the performance is much
better than the stock antenna. Very flexible too.

I've enjoyed my FT-50R for 1.5 years--great little radio and has tolerated
my abuse (dropped on ground/concrete) several times with no ill effects.

Source record: 149437

I am looking to buy a watt meter that is fairly accurate on ssb pep.
The NYE station monitor is probably about the best, but they are hard to
find and expensive. I have heard the the Yaesu YS-60 is supposed to be
fairly good also. But having seen the ads for the Autek WM 1 in QST for
$129, I am now very curious about the quality and performance of that meter.
I am looking for any opinions on this meter from those who own them or have
used one. Thanks for any help.

Try this web site http://www.mindspring.com/~otterson/nhrc3/index.html This is a small repeater controller company comprised of hams who came up with a better idea. A repeater controller with all the features you want for well under the price you would think. Check out their web site. You can build a full controller following their plans for around $60.00 or buy one ready to go for around $150.00!! AND they will work with any repeater. I personally don't own one but there are a number of repeaters in the area using them.

Hi there
I have for sale a brand new Icom IC-W32A ht with a CP-12L cigarette lighter adapter, HM-46 external microphone, instruction manual and original box. This is a true dual band ht that can receive V/V, V/U or U/U simultaneously. It does crossband repeat and can be opened up for extended transmit and receive. It has a lighted keypad, menu system and online help system on the display. The included battery is the BP-180 that gives 3.5 watts. It can give you 5 watts with a BP-173 battery or the included CP-12L adapter. This stuff is brand new and still on warranty, all bills of sale are included. A check of HRO prices would put the total value at over $400. U.S. Offers over $300. U.S. will be considered. The price will include shipping insured by airmail. I cannot ship C.O.D. from Canada to the U.S., postal regulations do not allow that. Other ways can be found. If interested, contact me by email.

NiCd memory is pretty much a myth for most normal use. There are some very rare cases where memory effect can occur if the battery is constantly charged and discharged to exactly the same place (e.g. a satellite that uses the Sun to recharge and has a consistent duty cycle of sunlight and darkness.

One thing that is actually pretty bad for NiCd's is if you really drain them. Some people will make it a point to drive the batteries down beyond where they will turn the radio on or turn the drill etc. This is advice based on the myth. However, that can actually cause some of the cells to reverse polarity. Once or twice and you can be forgiven. Do it more often and you will damage the battery and shorten it's life or cycle.

From: Ken Bickel <ac4vv@megsinet.net>
Message-ID: <6f4b1rpdh1@news.megsinet.net>
Source record: 149453

Slow scan TV signals sound like a warble. It takes about 90 seconds to send an SSTV picture using Scottie 1 or Martin 1, two of the more popular "modes" of transmitting. There are faster modes but the resolution is not as good. Listen on 14.230 or 14.233 to hear SSTV signals. Wait a few minutes if you don't hear anything. There may be someone on you can't copy.

SSTV pictures have half as many lines as regular TV and their size is approximately 320 by 240. The resolution as about 140 dpi.

TIM wrote in message <35158F4D.2B55@megalink.net>...
>I have this radio and I really don't know much about the opperation. It
>has, new and old ssquelch and "x" mode I have found inside of the radio
>an x mode and normal switch but havn't a clue what it's all about. Tim
>N3LYT

The NEW and OLD selections are as follows:

NEW "ON" - 150hz pl required to open RX, 150Hz tone on TX
NEW ""OFF" - open rx squelch, 150Hz tone on TX

OLD "ON" - Carrier squelch on RX, No tone on transmit
OLD "OFF" - open squelch RX, 150Hz tone TX

The X MODE connector is for use with secure voice and data
equipment interface with the RT-524.

If I can find the manual I have somewhere around here, I can
give you the pinout of that connector.

POWER is 8 watts LOW and 35 watts HIGH, tx tube filaments
and HV supply disabled in OFF position for battery conservation.

Good Luck

5500. Murch UT-2000A Question

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-23 00:00:00 UTC
From: martyt@pobox.com
Message-ID: <3515da4b.18042925@nntp.a001.sprintmail.com>
Source record: 149463
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.antenna,rec.radio.amateur.boatanchor

Just bought a Murch UT-2000A tuner - what a pretty beast inside!!

Seems like I've heard of at least one or two mods for that tuner - something about "SPC" - anyone know what that's all about and what the mod is?

Another semi-related question: When I first hooked it up, I ran my dipole directly to the tuner and went though the various bands, tuning for 1:1 SWR and writing down the settings.

I then added a 5-position coax switch and an 18 inch coax jumper between the switch and tuner, along with hooking another dipole to the switch. I found that the tuner settings were completely different for 1:1 SWR after adding the switch and short length of coax - considerably less inductance was required on all bands. Why would adding the switch make such a huge difference??

Thanks & 73,

-Marty KI0LO

Ham equipment for sale.....

600W Peak, 400W continuous output, wideband, class A linear amplifier designed for 15-150 MHz. Average drive required for full output is only 15W. Single drawer unit includes Kilovac relay COR switching, adjustable time delay, and accessory switching. Amp utilizes a wideband splitter/combiner combo, auto bias switching, thermal protection, and uses MOSFET transistors. Amp delivers extremely clean signal and is overdesigned to provide 100% duty cycle at 400W output. Requires 28VDC @ 70A peaks for a power source. Asking $500 or best offer. I would also consider a trade for a solid state HF transceiver.

Pride 250W SSB / 100W AM/FM output HF (160-10M) solid state base amplifier with power supply, receive preamp, status LED's, etc. Uses 12W to drive. $150.

250W minimum output, all mode 80M-6M solid state base amplifier with built in power supply. 15W drives it to full output. It includes a variable drive attenuator. $250 O.B.O.

250W PEP / 100W continuous output 6M amplifier. Solid state base design with built in current limiting power supply. Includes meter, ALC/VSWR protection, receive preamp, and only requires 2W of drive for full output. Asking $150 O.B.O.

Gonset GSB-100 transmitter (80-10M). Works great, cosmetically fine. Has AM; PM; SSB; & CW modes. I will even throw in a second unit that's good for spare parts. Due to the weight of this item, I will not ship. $150 O.B.O.

If interested, please reply via E-mail at wizard@eskimo.com

For those of you looking for another source of radios may want to look at the Midland LMR series radios. Model 70-342BXL, front mount, Model 70-442BXL, rear mount covers the amateur band. Model 70-442BXL rear mount, covers the amateur band. Both models may need a little tweeking. These are 40 watt, 80 channel radios. I have used these models using a low frequency of 144.00 to 162.00 mhz without any problems.

This model radio is now coming onto the surplus market at very good prices.

FYI,
Tnx
Dan

Hello all, I feel it is important to impart any info. of a positive nature when it occurs in the world of amateur radio, and it has for me! I had to send in my IC-738 rig for out of warranty repair (it would not transmit audio and receive would intermittently cut out). I sent it in next day express on Monday, they got it Tuesday, fixed it Wednesday, shipped it Thursday, and back to me it arrived on Friday of the same week! That is the fastest turnaround I could have ever imagined. I figured I would be without my radio for at least a month. But I am happy to say it was just four days. If more companies had this kind of efficiency in repair time, we would all be singing praises. IMHO, I am happy with Icom, and will consider their products in the future based on this very positive happening!

Cheers!

Joe

Has anyone else experimented with homebrew software to control the Icom IC-706 transceiver via RS-232? I'm curious if you've discovered any commands other than the 10 in the manual's skimpy information.

The table on page 39 lists commands 05 through 10 (hex). I found out that "commands" 00 and 01 (and possibly others in the range of 02 - 04) are sent by the radio to return "status", e.g. 00 and 01 for frequency and mode respectively, corresponding to 05 and 06, which set frequency and mode.

What I'd really like to know is how to control some of the radio's more esoteric features: setting alphanumeric names for the memories, changing CW speed, changing power, etc. Has anyone found any "hidden gold" in the command table?

73,
Joe

I beleive that the HR-2A use 12 Mcs crystals and the HR-2B uses 8 Mcs
crystals. The receiver uses the same crystals.

I am using the 500 hz filters (9 Mhz & 455 khz IF) for CW in my 756. With the dual pass band tuning you can narrow the 500 hz filter down to about 250 hz. The standard 2.4 khz SSB filter narrows down to about 1.8 khz with dual pass band tuning. Also with CW you have 320,160,80 hz audio filters. In my opinion, except for CW, you do not need additional filters.

Here is a trip back in time to the vacuum tube era.

Handcrafted Heathkit SB102 Transceiver with SB600 power supply.
Including free standing SB620 Vector Scope. And thats not all.
This package includes SB650 Nixie tube Frequency Display. And an HM102
SWR meter. Astatic Model 10-C Microphone on desk stand. The equipment
looks to be in good condition, though it has not been fired up in a
while. You will need to locate the manuals elsewhere. If you are
interested in this complete base station bargain package call Daniel
at 713 523-0515 in Houston, Texas and make me an offer.

You can listen on the ICOM users net on 14.317 at 1200 on Sundays (noon EST) to AB4OJ net control. I ask the same question last Sunday about the IC-746. A few hams have the radio on the air and the reports so far are good. Nothing wrong with the radio so far. However, it takes about 6 months after a radio is released before any problems are known.

It seems that you don't REALLY know what does the phrase 'ripped off' mean.
Let me explain you: We can talk about ripping off when you have to pay $3000
for the radio sold in Japan for $1344 or in US for $1820.
And that's what we have here in Poland.I have to pay $3000 if I would like
to have one of those FT-847.Consider that we earn less (MUCH less) than
you do in US.
Think about it next time you'll be about to write that kind of rubbish.

> and BYPASS
Don't you think that shipment costs as well ?

> Yaesu USA and the Dealers and save $ 500 !!!
So why you don't you start such a lucrative business: importing FT-847.

>adding the switch make such a huge difference??

Do you have a balun at the dipole feedpoint. If you don't, you need one
to keep common mode currents off the outside of the shield. Changing
the length of that path effectively changes the length of the antenna.
18 inches generally won't make enough difference to notice even if
the outside of the coax shield is "hot". But connecting the coax shield
from the other dipole does.

The shield of the coax for the second dipole is always connected by the
switch body, and it is substantially lengthening the effective common
mode path. And the second dipole is probably acting as a parasitic
element to the active dipole too, and that detunes the active antenna
through shared common mode currents on the joined coax shields.

The cure is to make sure you're using good choke baluns at the
feedpoints of the antennas to suppress common mode currents,
and that you're careful to route the coaxes so that they aren't
getting induced currents on their shields from each other's
antennas.

I am thinking about buying this radio and would like to hear some comments regarding it. It seems really cool and MIL810 also. something I can use camping and in the mountians. I was going to get an FT50 util someone showed me this one. 6m is much more useful to me than the standard 2/440m combo. It would be nice if it was a true bual band or at least a primary and a secondary. (monitor two or more bands at once) and it they should make a longer lasting battery back. something around 1200mah. So what are some of the bugs, cool stuff and mods, are you happy, etc.

Remember a few years back when everyone was talking about
under $500 HF transceivers to be sold at Radio Shack.

Well, they are coming. First SGS Corp, now ADI Premiere.
So let us get the fear machine in gear. Cheap gear = CBers.

What the manufacturers are looking at is incouraging Technician
Class Hams to upgrade. And there are a lot of them out there.
A thing to note is that much of the equipment has been aimed at
the high end contester, not the beginner. What made some of the
old (70s/80s) transceivers so popular was the market they targeted.

I am glad to see someone with marketing sense.

From Newsline (20 Mar 98):

The $500 HF Radio

Last week we told you about the under $600 high frequency
transceiver. Now comes word that another company may soon
an under $500 radio available to the ham radio community.
That company is ADI Premiere.

Take a look at amateur radio HF rigs today and you'll see
mostly high-end contest models. Prices in the thousands with
dozens of features and front panels full of knobs and switches.
Premier Communications, maker of ADI radios, believes that's
enough to keep some hams off the low bands. So, Premier is
thinking about going simple by offering an easy-to-use HF rig
at or below $500.

"We're basically targeting it toward the codeless licensees that
have come in during the last decade. We are approaching 10 years
now of the code-less license. Of course the number of upgrades are
very low, so we are targeting those guys. Trying to give those guys
a real obtainable thing from them to go after that upgrade." Ken Collier,
KO6UX.

Ken Collier, KO6UX, is Premier's assistant sales manager. He says the
company is getting a lot of response from its request for comments from
hams about what features they want in a low cost HF rig.

"Basically what we're looking for is what we can cut out of a radio without
severely impacting those, the sales of the radio." Collier

Of course, low cost means the radio would lack certain features like
advanced signal processing. But Collier says the new model would

include general coverage receive capability. The company knows the price would have to be right.

"We'd like to keep the cost under $500 retail. And that is actual selling price. That's not the suggested retail price. Suggested retail is going to be somewhat higher than that. Whether or not we can actually do that remains to be seen, but the engineering staff would be pretty optimistic." Collier

Collier says Premier may decide later this year on whether to bring the cost and complexity of HF communications down to perhaps the lowest ever.

While ADI may wind up being the first to break the $500 barrier, another company has already come close. As reported last week, the Bellevue, Washington based SGC Corporation has announced that it has developed a new twenty watt out high frequency transceiver that carries a manufacturers suggested retail price of only $595.

The radio is made in China. So much for labor costs.

You are really out of step with the times.

Work on the radio? Its all disposable surface mount plug and play. There are no servicable parts. Only replaceable boards. You can train a chimp to fix a computer now.

Too bad you still retain the image of a real radio technician fixing things with meters and all that. Its 1998 and you are still in the early 1960s.

How you could sympathize with a hollow shell of a corporation that uses cheep labor from around the world and justify there not passing along the savings from Asian market crash to consumers while they suck up the profit from our pocket is beyond normal understanding.

The world is just not that complicated. You must profit from all this somehow.

Software mods for the FT8100 ver:1.00 date 03/98

Ingra-Beton@t-online.de and mcgyv@hotmail.com

The FT8100 uses a little bit differend aproach for
the up/download. It is not possible to change the
Country Codes via Software. The firmware and EEPROM
is a little bit bigger so a secure check can be
done and if the Hardware configuration won't match,
the FT8100 is refusing to accept the data file.

There must be anyway either a Secret menu or at
least 3 Jumpers for setting the country code.

But as usually Software rules, so it is possible
to move the lower and upper limits for RX and TX.

With this way the FT8100 will FULL OPEN and can
be used on all Frequencies for RX and TX where
the Hardware will allow it.

You will get a FREEBAND mod and the good thing
is that the ARS will still work.

To make the mod you will need the ADMS 2D Software
and a HEX editor or just visit:

http://ww2.sd.cybernex.net/~mcgyv/

where you can download the allready patched .RDF file
It does not matter what Hardware mod you have (or have
done) or for witch country your FT8100 is configured.

Technicaly you are only moving the limits for
the Frequecny dealing.

Make a .RDF file and edit it with a HEX editor.

The values on the following addresses are defining
the lower and upper limits for RX and TX on the
VHF and UHF bands

Band Lower limit adr Upper Limit adr
==========
VHF RX 0A66 and 0B2A 0A6A and 0B2E
UHF RX 0A76 and 0B8F 0A7A and 0B93

VHF TX 0A6E 0A72
UHF TX 0A7E 0A82

Value example:

VHF RX 0050 0280
UHF RX 0280 0650
VHF TX 0050 0280
UHF TX 0280 0650

If you insert the values from the example in the
abouve addresses, the FT8100 will be opened for
RX and TX from 50-280MHz and 280-650MHz.

After modification the following results are
mesured.

RESULTS:
Upload: Free.rdf & Stock.tpl (see web page:
http://ww2.sd.cybernex.net/~mcgyv/)

VHF:

RX 50.00 to 109.995 TX red light active on 80.00 to 109 (not
sure if it really TX'ing)
Also all the digits "X" are flashing.
Example: 50.XX to 109.XX

RX 110.000 to 136.995 Same as above, but has the "AM"
displayed.Also all the digits "X" are
flashing.But this is only between
110.XX to 111.XX twoards the 110.8 MHZ
range, the
flashing seems to slow down in "pulse"
(notblinking as fast.)

RX 137.00 to 210.630 Does TX but not tested for RX on a scanner.

RX 201.630 the .630 starts to flash. The 201. does not flash.

RX from 201.63 to 205.995 flashes, however still unknown if it is true
TX.

RX 206.00 to 280.00 TX but unknown if it is true TX

==========

UHF:

RX 280.000 to 550.000 TX light is on, but need to chek for true
TX

RX 551.00 to 650.000 TX light is on, but need to chek for true
TX, also 551.XXXto 650.XXX blinks

RX 750 to 869.00 NO TX

When at 750.00 , if you cycle backwards...you end up at 550.00...rotate
forware to get to the 600.00MHZ band

RX 894.00 to 1330.00 No TX

==========
Remember, the Mars/cap mod is not required to do this mod.

This mod is a product of the intercontinental
digital cooperation between:

Mazedonia - Ingra-Beton@t-online.de
USA - mcgyv@hotmail.com

East and West, together on the Net.

5543. VX-1R questions

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-23 00:00:00 UTC
From: "Michael J. Smith" <mjs@now-online.com>
Message-ID: <sRhR.278$X%2.2826922@reader1.cleveland.iagnet.net>
Source record: 149550

I have a few questions , maybe someone can help me out. Have you found that that Dual Watch does not work right? Is this normal? And is there a known problem with scaning when you put VHF and UHF freqs. in one band? And it seem it acts different when you start scaning with up or down button. Like if you use the scan down key it scans right over freqs. in the UHF band and sometimes locks up and starts flashing. I have done a software mod that allows me to put freqs. in one band. I have also a problem with the CW ID sending my call and then sending 0's endlessly, the only way to stop it is to shut it off.

Thanks

Mike mjs@now-online.com

> today! Here is how to correct the problem....

Hold <FM> and push 9 (DUP) until you see the DUP in the display. (NOT flashing) This places you into DUPLEX mode, which is what you MUST be in to cross band repeat. Next, you follow normal procedure of setting your channels, etc, then power up the radio and hold the 6 (RPT) key. If your radio is receving a signal while you power up, it won't repeat it until the carrier drops. The very next transmission it hears will be repeated. Example, when powering up in cross band with 162.55 weather freqency, it won't repeat it unless you loose the signal and pick it up again.

hope this is clear. Remember- DUPLEX mode.

Your "no TX audio" problem is probably due to damage to bottom flex cable
connecting logic board and connect unit where battery terminals are located.
I'd say somebody damaged it trying to get the radio apart, it is not as easy
as it seems!

Sure, but this does not look like a contender for mobile rig of the
year! Seems more suitable for a base radio. Why no base AT options,
then?

Phil

p.s. -- $325 is steep; but I believe the AT-180 for 706MkII is priced at
above $500. But it does tune standard near-resonant (unbalanced feed)
base antennas (up to 6 meters only) quite well

I had one for about 4 years and it was very nice. I liked the PEP meter movement. Only two complaints, on 40 meters RF affected power meter and I used numerous chokes and beads.
This did help somewhat. Also the meters are not lighted. Both the SWR and Power meters are self calibrating and compared against by digital bird RF power analyst it appeared to be quite accurate. I had purchased mine used at a hamfest fot $50. Well worth it.

Now use a Nye RFM003, its meters are lighted, no RF getting into the metered movement,
self calibrating, Both meters appear to be very accurate compared against by Bird RF power analyst. Love the peak hold and ALO lockout. No complaints.

I have an absolutely mint 5900DA, comes with:

CAW 592 5M ext. cable for Mic/Speaker
CAW 591 3M cable for Display
CMB 5900 Mounting bracket for Display.

This radio was bought for mobil use, bought a new car and changed my mind. Less than an hour's transmit time on it, never out of shack and cable extension kits are in unopened packages, will ship for 775.00 or BO, will consider swap for 742 w/220 or 642 w/440.

Friend of mind owns a FT1000MP and he loves it. He is a very finicky CW operator.
The only problems he has found are the following:
1) CW memory keyer does not work well. Have tried operation on more than one 1000MP.
2) On FM mode widest filter in 1000MP is 6 Khz so audio is low in the FM mode.

Other than these two issues, this is a very nice radio.

Source record: 149311

Hi there
I have for sale a brand new Icom IC-W32A dual band ht with a
CP-12L cigarette lighter power adapter, HM-46 microphone, BP-180 battery and
instruction manual. Here are some specs:
true dual band receive V/V, V/U or U/U
crossband repeater mode
receives from 118 to 174 and 400 to 470 normally
receive range can be expanded by a simple keypad sequence
I get cellular images perfectly from 600 to 999.995 mhz
200 alphanumeric 8 character memories
backlighted keypad
full CTCSS transmit and receive and scan to identify while receiving
can be programmed by computer, software included
transmit frequency range expandable by a simple hardware mod
5 watts output with 12 volts D.C. or BP-173 battery
3.5 watts output with included BP-180 battery
power saver mode and auto power off function
tone scan, tone squelch and pocket beep operation
dtmf memory
auto repeater function
A check of HRO puts the price at over $400. with the included accessories.
I will let it go for the best offer over $300. U.S. shipping included by
airmail.
Still on warranty for one year, this is new equipment.
If interested, contact me by email.

>operation (only)?

No, I don't find it strange. Internal tuners are usually a joke anyway. They have a very limited matching range, and can't handle balanced line at all. The "optional tuner" is a screwdriver type mobile antenna. It is a joke too. It is only 37 inches tall. How well do you think that'll work?

>Am I missing something? Is Yaesu going to come out with an FT-847AT,
>right after lots of folks buy an FT-847??

Look in the box and see if there's enough empty space in there to fit a tuner. Doesn't look like there could be enough room to hold any reasonable HF tuner. A good tuner is generally bigger than a Japanese radio.

Gary, I cannot agree with you on that one. The AT in my TS-570D matches my G5RV on all bands from 10 thru 80. It matches my Hy-Gain tri-band beam (fairly narrow trap design -- TH3) and my DX-77, too, across the band on all bands where they are designed to work.

Without the AT, I would be manually manipulating my MFJ tuner (which is in bypass position) every time I changed bands or frequencies.

Agree .. would not be a good choice for balanced. but I don't feed my beam and vertical with balanced line. Re the G5RV, balanced would be better, but it does what I need it to do.

BTW -- tuner in my old TS-440 worked almost as well, albeit slower. External AT-180 for my 706MkII is equal to the one in my TS-570D.

So, my experience is that ATs are a good thing. I wish the 847 had turned out differently in that regard. The option they are offering seems ridiculous.

>shows 10+volts when charged and the radio quits way before the 4 volts like
>the book suggests. How can I have a reading of over 10 volts when my battery
>is only 9.6 volts?

Just remember that each nicad cell has a full voltage of 1.2v each (so
a 9.6 pack will have 8 cells at 1.2v each)

After a full charge and before the cell settles, the voltage can be 1.4v
per cell (so 1.4v x 8 = 11.2v which is abt the max you'll see after
full/long charge)

A nicad cell is considered used when the cell gets down to the voltage
of 1v (so the pack would be used up for basic needs at abt 8v...and
you'll see a really fast drop off of voltage at this level)

>Also, how are Ni Cads? Do I need to fully charge and fully drain the battery
>when using?

For charging (with the wall warts, not the newer smart chargers)here's
how to fiq the charge time...
Nicads charge at an 80% rate...so take the charge output of yr wall wart
and divide it in the rating of the battery for time in hours and then
add 20% time.
exp; 1000ma battery, 100ma charger (assume its the right charger for the
battery so v isnt considered)
1000/100 = 10 hours of charge time + 2 hours (20% time) for total of 12
hrs!

Remember that over-charging and running the cells below 1v can be real
killers to the battery packs.... With care the pack should be good for
300-500 charges which is a few years in real use.
PS; nicads self-discharge at 1-2% a day so even if not used , you should
prob charge them at least once a month. I rotate 2 batteries for max
use(and a spare of course).

good luck
Tom aa2vk

>I am glad to see someone with marketing sense.

Yeah, but lets see if they do it right. SGC did *not* do it right.
A basic HF transceiver needs to be 100 watts right out of the
box. You need that if you ever want to drive an amp, and you
need that if you want to compete on an even footing with
other amateurs running barefoot. Another QRP rig misses
the target. Now making the rig 100 watts costs about $100
extra, but that's non-negotiable as far as I'm concerned,
even if it forces the street price above $500.

Ideally, I'd like to see a big enough heatsink fitted that
a fan would not be necessary. There's no need to make
this radio the size of an IC-706. It should be targeting the
low end desktop.

The bit quoted below about leaving out high technology
also completely misses the mark. High technology is
cheaper, if done intelligently. A $5 DSP chip can give
you what costs over $175 to do with analog. The new
Kachina radio, while not in the target price class, still
points the way toward how to build a modern radio. Do
all the heavy duty filtering, processing, and mod/demod
in software. The only thing analog in the radio should be
the RF front end and the audio output stages.

I'd like to see almost all mechanical controls removed
from the radio. They're expensive due to the interconnects,
are the most failure prone components, and should be
replaced by a multifunction membrane touchpad. With
intelligently written control software, that can be more

flexible than mechanical controls, and cheaper too.

Note that next to the PA, the largest cost of this
radio is in the firmware. That can be pared back to
basic functionality in the base radio to hit the target
price. If the firmware is stored in eeprom, feature
upgrades could be sold and downloaded into the
radio over the internet.

(The base radio need be no better than an old
Galaxy V or SBE-34.)

And ADI could offer a software development kit so that
independent firmware could be developed for the radio.
I'd pay up to $200 extra to have that.

A radio like this could be built to sell for a street price
of $475, but I'd be willing to go as much as $575 for the
base radio. ADI could offer higher profit accessories for
the radio, such as an external autotuner. Keyer firmware
could be an extra cost upgrade, more filter choices could
be an extra cost upgrade, direct PACTOR mod/demod
could be an extra cost upgrade, etc. Even if the margin
on the base radio is paper thin, money could still be made
on it via these optional firmware features.

Gary

>>Does anyone else find it strange that what appears to be a base radio
>>is tunerless, and has an optional tuner which seems intended for mobile
>>operation (only)?

Did you notice that Yaesu is going to be offering the ATAS 100
Screwdriver antenna? It will supposedly be continuously tunable from
80 Meters to 70 Centimeters and will be driven on the shield of the
coax by the FT847. For a mobile setup, in theory, you wouldn't need
an Antenna Tuner.

Price on the ATAS 100 is a bit steep, however... reported to be $325
or so.

73 es gud luck!

From: cj <cj@boi.hp.com>
Message-ID: <3517EB03.220E@boi.hp.com>
Source record: 149329

I too have been looking at either the TH-79A(D)H or the TH-G71A. I'm almost always somewhere near the fringe of repeater reception (lots of mountains to get in the way), so having higher power available is handy. What I would like to know is, on either one of these, is the max power available with a battery, or only if you use a car adapter? They seem to come with batteries which only allow lower output power.

Also, I think I like the idea of dual receive (TH-79), but I like the idea of more memories on the TH-G71 too. In reality, the 82 memories (or whatever) on the TH-79 are probably more than enough though. Any thoughts on this? How many memories do most people use (I'm still used to my old Icom 02-AT, which only has 10, which is WAY too few...).

Also, as for dual receive, what's the main advantage of this feature? You can, obviously monitor both bands at once, which could be nice. I assume it's possible to transmit on one band and receive on the other (full duplex), can the TH-G71 do this?

Kenwood also mentions something about being able to control a TM-V7A remotely via DTMF with the TH-G71. Why can't you do that with the TH-79?

i built the ten-tec 1208 transverter and love it. The only thing i don't like is that the rig i use it with (a 757gxII) doesn't put out enough on it's xvtr output to drive it. The 1208 can be driven w/ 5 to 10 watts i think.. can't remember.. been a while since i built it, but i opted for the 10 watt drive. The pain in the rear is that i have to decrease my drive by a pot inside the 757 from 100 to 10. The 1208 works best in the lower portion of the band (SSB, CW) and that's all i use it for. But, when 6m is open, i've talked over 1000 miles via sporadic-e w/ just 10 watts and a dipole in my attic.

Sure. Use a 600:10k audio transformer. UTC used to make these in an octal plug-in package, and Switchcraft offers them in an inline package with male and female XLR connectors so you can just plug it into the mic line. Check with any pro music store, or Tech America, Newark, etc.

Source record: 149335

Does anyone have any information on the Kenwood model TM-G707A dual band mobile transceiver (shown in the Kenwood ad in the April '98 QST)?

It looked like some sort of follow-on to the TM-V7A, perhaps with the same chassis but an orange vs. blue display. It looked like the display uses larger characters than the TM-V7, at the expense of being able to show two frequencies/memory names at once.

The ad was very lite on any detailed information, concentrating more on telling readers how they'd be transported to a new level of cruising (!?) or somesuch. There's no information on the Kenwood web site, at least that I could find yesterday. I haven't tried calling Kenwood yet, but thought I'd check here first.

Any information/insights? How does it compare/differ from the TM-V7, or is it a replacement? Could it just be Kenwood's answer to the aging baby boomers' need for magnifying glasses to read the average LCD display? Or was it Kenwood's contribution to the April Fools issue of QST???

Cheers, Bob K9CMR

Sounds like sulfur hexafluoride (SF6). It is still used by HV labs, utilities
and such. I don't know about a source. I would ask Textronix about the
specified material, as I may be all wet!
SF6 is inert and has no restrictions, but I wouldn't want to breath it, etc.

Due to overabundance of projects I am selling the following items:

Kenwood R-2000. This BC-30MHz shortwave receiver is in excellent condition. Comes with manual. $300 plus shipping.

Bearcat BC760XLT, pre-ban model. This scanner radio is in excellent condition. Comes with antenna, charger, and copy of manual. $125 plus shipping.

* Hallicrafters SX-104. This 30-50MHz boatanchor receiver is in excellent cosmetic condition and good working condition. $75 plus shipping.

* Hallicrafters SX-105. This 152-173 MHz boatanchor receiver is also in excellent cosmetic condition and good working condition. $75 plus shipping.

* Special deal - take the pair for $125 plus shipping. (Sale pending)

Realistic DX-75. This GC boatanchor receiver is in very good-excellent cosmetic condition and good working condition. Includes an original (NOT a reproduction) instruction book. This is when Radio Shack was still Radio Shack, and not a Tandy division. $50 plus shipping. (Sale pending)

DenTron MT-2000A Antenna Tuner. 3kW PEP antenna tuner. This unit is in good cosmetic and working condition. $125 plus shipping.

Cobra 148GTL-DX CB transceiver. Excellent condition, including all original documentation and box. $250 plus shipping.

Marko 10-40M mobile linear. 75W, AM/SSB. Condition unknown. Take a chance? $25 plus shipping.

I need to get out of the radio business, so I would prefer outright sale to trades. Delivery possible in north Texas, eastern Oklahoma, or northwest Arkansas. If interested, or for more information, email me at twhite@cyberramp.net. Thank you.

Which one of these two new radios would you buy? I have been considering both since hearing about them. I am also of the notion to just wait and see which radio has the least quirks and/or bugs before considering. Gotta love all this new tech. that has radios with more features than ever before. Price quotes I have gotten have been 1830-1850 for the Icom and 1820-1850 for the Yaesu.

Cheers!

If you run old ham DOS slow stuff like a logging program, or an RTTY or terminal program for a Packet setup ect. then consider an old laptop. The LCD screen is silent on the radio. My old Zenith 286 Supersport runs at 12Mhz and also no birdies on the radio. I got it at a swapmeet for $40. It takes 10 seconds (My birdie prone Wintel takes 2 minutes) to boot from a cold start which is handy to check the log quickly when your just monitoring with the puter off. My only drawback is a small 20 meg hard drive so no large ham database, although a 40 meg drive would fit a SAM database. If you can find a 386 then you could use a ZIP drive and that would be the cats meow.

You have to wonder if the 847 has 2m, 440, 6 & HF and cross band repeat - you should be able to carry on an HF qso from your hand held while you are in radio range of your 847! This depends how much remote control yaesu built in to the 847.

Should be cool if they did it right.

Hello Gary,

I recently completed phase I of my "ground frame" or "ground window"
project. All coax lines are now passing through a set of bulkhead
connectors mounted on a well earthed "ground frame" just outside the
shack. This gives a good ground to the outer shield at that point.

I was surprised how much it changed the behaviour of the tuning on all
bands and all antennas. It also alleviated some RFI problems.

I still need some advice on phase II, which is getting my power
outlets for the rig and the PC moved over to the "ground frame", or as
near to it as possible. Is it appropriate to mount outlet boxes on
the wall for 110v and 220v and have the steel shells of those boxes
going direct to the "ground frame" ? If so, what do I do with the
ground wire from the service panel that would normally go to those
outlet boxes?

: and early 80's, and used the Trio name in markets outside the US.
:
Actually, they only used the named Trio in G-Land and Japan. I don't know
the reason for using it in Japan but Kenwood was a registered trademark
for a domestic consumer electronics company in Blighty, and was therefore
unusable by Trio.

They switched to the Kenwood name there too in the late 80's.

My very first two metre rig was a TR-2200G, and I picked up one of the
Drake OEM'd 22C's a couple of years ago at a local hamfest when I was
overcome by a wave of nostalgia!

The TR-22C was slightly different in that it had an internal nicad
charger, whereas the Trio TR-2200G didn't. Perhaps that was peculiar
to the UK model, though.

They made a follow-on model called the TR-2200GX which I believe was
identical to the TR-2200A. It had a more sensitive receiver, provision
to use their external VFO (similar to that available for the TR-7200
mobile rig, and an RF output of 2 watts, rather than just 1. It also
had a removable telescopic whip which could be replaced by a rubberised
helical. Many UK amateurs modified their 2200(G)'s to gain similar
functionality by removing the telescopic whip, and installing a BNC
socket in its place.

Big thanks to...

Kenneth R. Teleis <ken@teleis.com>
Pete McGreevy <pmcgreev@mail.idt.net>

...for their assistance. In short the fan problem is common among many various models, so I guess this is just a feature. :) The fna will not move on power-up, will run at high speed at first key-up and a minute thereafter, then fall down to a slow speed indefinitely.

On the software side, the problem was with the cable. Apparently many ADMS-2D packages are coming out with the cable misconfigured. If you open up the shell on the DB9 connector, there are 2 wires--red and brown. The brown wire should near the outside edge, and the red on the inside. Mine (and others) are showing up in reverse. If you can solder just switch the wires. I did this and all is well in Yaesu programming land.

Message-ID: <6f99bt$57kk$1@newssvr03-int.news.prodigy.com>
Source record: 149347

Joe - It depends what your interests are in the hobby. The FT-847 has 430mhz all mode capability while the IC-746 does not. The IC-746 has a built in antenna tuner and quad conversion receiver and therefore is probably a more serious hf radio. The big advantage about having 430mhz all mode is that you will be able to work high orbiting satellites. One might say so what right now, but when AMSAT finally gets Phase 3D in orbit (hopefully this year) it will be a huge event for amateur radio and there will be a lot of interest in working that bird because of its world wide coverage. The FT-847 is ready to work that satellite now with the proper antennas of course. 430mhz ssb will be the MAIN uplink frequency for Phase 3D. Of course you could always get a IC-746 and then a separate 430mhz all mode rig for satellite work, but then you are talking probably several hundred extra dollars even for good used gear that can put out 35 watts or more on 430mhz all mode, and it will not be near as convenient as having it all in one rig for tracking your duplex uplink/downlink frequencies. My two cents.

5608. Icom T8A / HP MOD available?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-24 00:00:00 UTC
From: wrex@quik.com
Message-ID: <6f9ju4$m8$1@nnrp1.dejanews.com>
Source record: 149351

Are there any other mods for this new HT? I have the new ICOM T8A/HP (high power)and am looking for a mod for it. Any will do but would appreciate BOTH a TX and RX MOD. If you can direct me to a site that has "up to date" MODs...that may help also.

In exchange, I have the IC 207H TX/RX MOD if someone wants it...

Thanks and 73's,

KF4TSF

Try the Kantronics KPC-3 it will do 10 users on vhf with no problem. I just tried my KPC-3 and no problem at all. You have to set maxusers to 10 first then set users to 10.

5612. FS-Universal M-400 Decoder

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-24 00:00:00 UTC
From: bush143@postoffice.worldnet.att.net
Message-ID: <6f6t8j$eef@bgtnsc02.worldnet.att.net>
Source record: 149377
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.shortwave,rec.radio.swap,rec.radio.amateur.equipment

I have an excellent (brand new condition) M-400 that I have no need for, which I acquired as part of a package deal. It comes with the AC adaptor and original manual. The unit has no scratches, nicks or dents. The unit currently sells for $399 new, I would like to sell it for $150 shipped, or best offer.

Here are some basics from the original owners manual:

Shortwave reception modes include:

* baudot 45, 50, 57, 75 and 100 baud.
* ASCII 75, 100 adn 150 baud.
* SITOR A & B automatically selected by AUTOR.
* FEC-A 96 and 144 baud.
* SWED-ARQ S, M and L lengths.
* FAX (to printer port) 120 LPM 576 IOC

For VHF/UHF enthusiasts, the following capabilities are featured:

* ACARS Aviation message/telemetry mode.
* POCSAG Digital pager mode.
* GOLAY Digital pager mode.
* CTCSS (PL) Decoding 41 standard codes.
* DCS (DPL) Decoding 104 standard codes.
* DTMF Decoding 16 digits.

>Gilles Auger (VE2DRW)
>gauger@dsuper.net

I bought a Service Manual for the CPU-2500 on the web at :

http://www.sarrio.com/sarrio/rsman3.html

Yaesu (MAINT) CPU-2500R Transceiver $19

Rudy Sarrio is good to deal with and very prompt! Check out his web page! All his manuals have a cover and all relvant schematics are duplicated TWICE, which is a real nice touch!

5616. WANTED: Collins 51J4 or R-388A

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-24 00:00:00 UTC
From: l.mclaughlin@popmail.csuohio.edu
Message-ID: <6f725jhgr4@csu-b.csuohio.edu>
Source record: 149381

WANTED: Collins 51J4 or R-388A

Can pay up to $250 for a unit in good physical & operational condition with standard accessories. Candidly, I realize the prices of these Collins/military models are all over the map, but this is what I can afford to pay. May not find one on the net, but maybe I'll run into one via another source.

Email with details if you have a unit you wish to sell at this price.

Have Hewlett Packard Laser Jet II printer could swap as well. Can provide details on HPLJII if you're interested. This is one of HP's most desirable/dependable printers and least expensive to operate. Supported by Windows 95 as well.

Thanks

5617. IC271H manual needed

Anyone heard of a Trio TR-2200 2 meter Radio? Is this a Drake???
****

I recently picked up 2 broken Trios at a hamfest and am Trying to find
out more about them. One has a Case that says Drake and it fits like a
glove.

I'm wondering if it is a Drake indeed or a foreign knock off.
If you've heard of it or have a manual or schematic please email me.

5636. six meter rigs

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-24 00:00:00 UTC
From: rah1@hopper.unh.edu
Message-ID: <slrn6hemm2.inc.rah1@hopper.unh.edu>
Source record: 149401

Hi...I'm thinking of purchasing some 6 meter equipment and would like to hear from anyone who's had experience with one or more of the following:

a) Ten-Tec transverter
b) MFJ's 6 meter SSB rig (an "adventure radio") I believe
c) MFJ's 6 meter FM rig

I only have enough $$$ to buy one of the above, so I'm interested in knowing the advantages/disadvantages of FM and SSB, how well the transverter works, what kind of activity I can expect on 6 meters, considering that I'll be running it from the car with a ground plane, and anything else that might be important. I'd appreciate any info. Thanks...

Rob KB4ZGU

Wolfgang, thanks very much for the pointer to the "www.kenwoodcorp.com" site. Silly me, I was looking at the "www.kenwood.net" site, and expecting to find the information in the Amateur Radio pages there!! Ah, well... Maybe Kenwood will get "all" their sites synched up some day, but at least now I can go to the hamfest this weekend armed with a bit more knowledge. It looks like the TM-G707A/E is a functionally slimmed-down version of the TM-V7, with a larger display font for us farsighted old guys, probably at a lower price point than the TM-V7. Thanks again!

Best regards, Bob K9CMR

PC repair is normally done at the board level because the boards
are commodity items. It is cheaper to replace the board than the
labor cost of doing component level repair. But that isn't the case
for radios. The boards are not commodity items. Production runs
are short, and some of the analog parts on the boards are expensive.
So they are still repaired at the component level. Fortunately, surface
mount technology makes that easier than in the days of thru-hole
components.

Hi there
I have for sale a brand new Icom IC-W32A dual band ht with a
CP-12L cigarette lighter power adapter, HM-46 microphone, BP-180 battery and
instruction manual. Here are some specs:
true dual band receive V/V, V/U or U/U
crossband repeater mode
receives from 118 to 174 and 400 to 470 normally
receive range can be expanded by a simple keypad sequence
I get cellular images perfectly from 600 to 999.995 mhz
200 alphanumeric 8 character memories
backlighted keypad
full CTCSS transmit and receive and scan to identify while receiving
can be programmed by computer, software included
transmit frequency range expandable by a simple hardware mod
5 watts output with 12 volts D.C. or BP-173 battery
3.5 watts output with included BP-180 battery
power saver mode and auto power off function
tone scan, tone squelch and pocket beep operation
dtmf memory
auto repeater function
A check of HRO puts the price at over $400. with the included accessories.
I will let it go for the best offer over $300. U.S. shipping included by
airmail. I cannot ship c.o.d. from Canada to the U.S., other arrangements
can be made.
Still on warranty for one year, this is new equipment.
If interested, contact me by email.

>then?

I believe that an Antenna Tuner is an option at around $250ish dollars
for the FT-847. The radio is supposed to be approximately the same
size as the Kenwood TS570, which wouldn't make a bad mobile.

I myself would prefer the FT-900CAT for a mobile because of the
detachable faceplate, but I would consider the FT-847 later. I also
wouldn't buy this radio anytime during the first 6 months to a year of
Production for the US Market.

73 es gud luck!

From: whester@nyx.nyx.net
Message-ID: <890850007.592863@iris.nyx.net>
Source record: 149216

I have a Tektronix P6015 Probe, 1000:1 attenuation, rated at 20Kv DC or RMS, with maximum pulse voltage of 40Kv.

It was provided with a can of High Voltage Dielectric Fluid, Fluorocarbon 114 (C2 CL2 F4) to fill the probe. The Tektronix part number on the can is 252-0120-00. There is also a warning in the instruction book not to use any other type of fluorocarbon fluids, because dangerous pressures may develop.

The fluid charge of the probe is visable through the transparent nose of the probe when the probe tip is pointed down. Any liquid visible is indication of proper pressure inside the probe.

The instruction book has a copyright date of 1974.

Then he said a dumb thing:

>
> (The base radio need be no better than an old
> Galaxy V or SBE-34.)
>

If a radio "no better than" a Galaxy V or SBE-34 were available today, even at a retail price of $300, they would not be worth taking home.

Even in their day, they were low-end, drifty, barely acceptable equipment, and outclassed by most every other rig available at the time.

> sound terrible with 10 watts and if you amplify that it just gets MUCH
> WORSE!!!... Jordan VE2SWL/VE6...

Well, it depends on what you are doing. I use one here to drive a Radio Shack amp on FM. I have the 2m power out set to 5 watts and there is no problem whatever. By the way I AM a weak signal guy.

On the other hand, if you use it to drive one of the many so-called linear amps full out on SSB and try to use RF switching to boot, then there will be plenty of complaints. However, if you use hard switching for the amp and keep the drive down so that the amp is relatively linear, it shouldn't be much of a problem. It'd be a good idea to check with your weak signal ham neighbors to be sure that the drive really is low enough for linearity.

(The careful reader may note that I am not really all that much a believer in linear brick amps! They are possible, but many if not most folks overdrive them.)

Good luck and 73, CJ K0CJ

>Does anyone know the actual use of the AUX band on a TS-820?

I have a TS-830 with an aux band position, so for whatever it's worth this is what my op manual says.....

"An AUX receive band is also available.
Coilpack (Receiver front-end) and PLL components must be
installed and aligned for the specific receive frequency range
desired"

-------------I had also tried to get a battery pack and tone encoder but no
replys last year.

I have the base charger and mobil holder/charger but am not selling them.

If you nead to use the PL tone and most repeaters use the same tone you can
just set the trim pot via a scope --- which is how mine was set for the
107.2 tone used in my area.

Good luck,

73,

Marc Schneider, Psy.D.

I got one (Trio Kenwood TR-2200);the Drake version was made for Drake by
Kenwood (I think) - exact same radio as best I can recall. I bought mine new
around 1977 - my 1st 2 meter rig. Crystal, 10 channels, mobile style case,
Nicads, telescoping antenna. I got the mobile mounting bracket for free as a
promo. I probably have a manual somewhere if you need a copy -- E-mail me.

The problem with the IC-706 on 6 and 2 is the poor 3rd order IMD about
25db down... and people seem to think that heir wattmeters should be
near full scale when they use ssb I have not heard a clean 706 even a
markII ... anyways as far as linaers go garbage in = MORE garbage out
especially in the BRICKs we see today... 73 de Jordan...

Hi Gang,

I've just acquired a little Icom ICX-R10 receiver which is the little one that looks like a handi-talkie, but covers 0.5MHz to 1300MHz, I bought it to take with me on an overseas trip this susmmer. Are there any programming or modifications for the radio that I should know about? The European version has expanded frequency converage, and I'm guessing might be selected by a keyboard initialization sequence. However, I don't have any info on the radio, other than what's in the user manual.

Thanks,

Jim W8ZR

I was just fortunate enough to be the benificary of some old QST's from
a friends' Grandfathers estate...

So.. I grabbed the Dec 1959 issue off the top of the stack... here are
some observations and thoughts:

The Collins KWM-2 Was HOT! Lots of ads for it.. and only $1095.00...
A Hornet 3-Band, 3-Element Beam was $49.95...
A Spaulding 48' Tilt-Over tower was $176.21...
Radio Shack was selling Collins Equipment (75S-1 Rcvr, 32S-1
Xmtr, 312B-4 Spkr), only $27 Down...
Burgess Battery Company was still in business...
"CB" was not a dirty word, and 11Meter gear was being
advertised
(of course you needed a license for CB then too
... :)
Heathkit had not yet reached it's pinnacle with
regard to ham gear...
(They had nothing to compare with Collins/Gonset,
etc. top of the line stuff)...

There were a lot more of the little cartoons spread throught QST (I miss
those! let's get them back in QST! Jeeve's we need you!)

Found a real neat/interesting design for a 1KW linear.. :)

Most of the businesses advertising in Dec 1959, are no longer in
business.....
But... they have been replaced by new companies selling similar
products...
So... what does that tell us?

Speaking of the "cartoons"... miss those scruffy looking cats that let
us spot those "Strays"... which were one of the more enjoyable aspects
of QST to read :)

Here's a few choice strays from Dec, 59'

"K4PPR, whose last name is Beam, lives at 73 Grid Drive"

"WA2BWT reports the FCC's sense of humor is still in high gear. They
issued WV2BRA to his cousin, a YL."

"W2YVP says he got a QSL from W1RJA confirming a QSO that took place
eleven years ago, but doesn't
tell us how come it took so long to get the card."

"W1SS conducted tests with several other members of the SDL net on
the morning of the eclipse in
New England, Oct. 2. H reports that he himself was in the path of
the darkened area and that all the
net stations he worked were outside the path of the eclipse. All
these stations reported sizeable
increases in his signal strength during the period of the eclipse."

* *
* * * * * *

Also got a copy of the 1956 Radio Amateurs Handbook....

The "Amateur's Code" changed a bit... "Gentlemanly" is now
"Considerate"... an appropriate change..
other wording has been "modernized" ....

It seems as though too many hams today ignore the code, especially the
"Considerate" and "Friendly" parts... If the flames and name calling in
these newsgroups are any indication...

The ARRL seems to be more interested in marketing ARRL products than
anything else... I went up to the ARRL web site, and tried to find the
Amateurs Code... couldn't find it... (I did find out how to order an
ARRL coffee mug...)

Yes, Yaesu made an sold the XF-30B AM filter, 6Khz wide Rx....
It or the CW filter was optional & only "1" filter would fit the
board... Fox Tango-Club - one time supplied a switchable 2 filter,
adapter board... Haven't seen one in years...

Food for thought.

I received the radio today. I also received a letter from Mr. Lessa
stating that he was not going to send the radio and containing a check
for the full amount. I checked out the radio which was rather ugly but
works well enough.
It seemed worth the money so I am keeping it and have returned Mr. Lessa's
check. Of the dozen messages I received with comments on Mr. Lessa
3 were favorable and 9 were not. One was quite funny and I wish I had
permission to reproduce it here. I sent the original check on
Jan 8th and received the radio on March 25th. So, end of story.

I produced the promotional and training videos for Yaesu USA.
I put the radio through it's paces and was, and still am, thoroughly impressed.
What can I say!
It is a terriffic! piece of ham gear...well worth the price!
I've also overheard several amateurs on the air that have owned the Icom and
Kenwood competition that like the 1000 mp best.
Those radios are also fine products and that's not to say that the other radios
may appeal to some more than the Yaesu, but when you hear of those that have
the disposeable cash to choose whatever they LIKE most and choose the Yaesu
product, That's a pretty solid endorsement!
Sincerely,

While costing slightly more than the $500 target, an existing radio
that meets these specs is the ICOM-707. I obtained mind for $730.

: transverter works, what kind of activity I can expect on 6 meters,
: considering that I'll be running it from the car with a ground plane,
: and anything else that might be important. I'd appreciate any info.
: Thanks...

You didn't say *which* transverter. I have the 2 meter to 6 meter version. It works just fine. I run mine SSB from the house, but the manual states that Ten-Tec expected it to be run FM with an HT as the driver. Be aware that there is limit to the drive input on the transverter. If you plan on using your existing mobile rig on low-power it should work, but be careful not to key-up on high power...nasty things will likely happen.

As far as FM vs SSB thats a big question. Is there any FM activity in your area? You can check with a scanner (most will receive 6 meter FM signals) but don't expect the same activity as is found on 2 meters. SSB operaton is generally for more distance/week signal type work and likely to be horizontally polarized (while FM is generally vertically polarized)

The spec info on the MFJ FM "data" radio say nothing of CTCSS encode (or maybe as an later "option") This is something that you are likely to *need* as most FM repeaters (at least in this area) have tone access to prevent garbage from tripping the repeater.

I understand that the MFJ SSB radio works ok. Understand that is analog tuning and does not cover the entire 6 meter band, but within its limits is a good "starter" radio.

When the band is open 5 or 10 watts will reach out many states away.

ian...the 745 was icom's top of the line twelve years ago or so.
that's when i got mine. it is still my primary rig. solid,
well-built, and reliable. of course, you must evaluate the particular
unit you're considering acquiring. but in general, it's a classic,
and if you can get one in good shape for 500 dollars (u-s or
canadian?) grab it.

dejim in minnesota. thanks, el nino.

While not offered in the US market, there is another one.
Take a look at
http://www.chollian.net/~hl1aqs/rig.htm
It says it costs 880,000 Korean Won.
Recent Dollar/Korean Won exchange rate has been fluctuating
between 1400 - 1600 Won/Dollar.

I have seen the rig at one of the Hamfests here in Korea.
I didn't like it too much mainly due to the poorly done cosmetics.
Being tuned the radio just for 3 minutes, I have no idea about its performance.

If interested, contact with the company directly.
The web page has contact information.

Regards,

In the ad (which i read closely as I got excited over it :-) it says that it
"offers full compatibility with all of the standard SSTV formats." Sounds
like however long it takes to do a "normal" SSTV image will be the same for
here.

I have the following Radio, and electronic equipment for sale. Reasonable offers or trades for radio and Pentium computer EQ. will be considered. All working last time tested unless noted. Shipping is extra.
Thanks

• Tempo-1- Tube type Ham Transceiver/with Power Supply 80-10 meters. Looks good and works well. 100W output. $200

• Swan Cygnet 270B Transceiver (80-10 Meters). Looks Good and works well. On scale of 1/10 it would be 8-9. This rig has an internal Power supply. $250

• Swan 350 Transceiver (80-10 Meters). Looks Good and works well. On scale of 1/10 it would be 8-9. This rig has an external Power supply. $250

• Motorola VHF Remote All tube Model: PA8270J SER.NO: 8697. There is also a tone Signal and intercom control on front below speaker. This is the type that was used by police and fire dispatchers in the past. Don't know if it works. $50

• Heathkit HW 101, 80-10 meter transceiver. No Power supply. It is receiving, but not transmitting. Not able to test. Looks are 7/10. As is $80.

• Hallicrafters Model S-108 SW Receiver with a calb. Ham band spread. Looks good works well.$75

• MFJ Rtty/CW Computer Interface Model MFJ-1224, used for copying code from the radio to your computer. $50

• Pearce Simpson, Guardian 23- All tube CB Transceiver/with mobil power cord and mounting bracket. Looks and works Good. $100

• Traynor, Group Two B- Audio Amp Head. High/ Low mic. in puts. Master volume, volume, bass, treble and tone shaper controls. $125

• Channel Master- Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM. AM not working. $150 for both.

• Sams CB Photofact- Several volumes, some continuos: numbers as follow: Continuos 57- 65. Individual 70,72,80,88,93,98,104,120,122,128 178,190,226.Will sell all or 10 for $3.50 each+ shipping. Single volumes are $8 plus shipping.

• AR Inc.- Stereo Amp, all solid state. $100

5712. Re: Icom IC-746 versus Yaesu FT-847

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-25 00:00:00 UTC
From: Tom Nicastri <tnic@IDT.NET>
Message-ID: <6faub8$205@nnrp2.farm.idt.net>
Source record: 149296

Because the 847 has 440 but I think most people would want 440 for other reasons.

I envision when I go on vacation I can bring one radio and set it up and have 440, 2m, 6 and hf. I will bring a small switching power supply and not have to transport extra radios etc.

Where I live there is lots of 440 activity. The popularity of dual band mobil rigs indicates we are not alone in wanting more bands in a single package.

You have to assume the other vendors are scrambling to bring 440 into there rigs. The MarkII already is giving $100 rebate and lots of freebies. I would think we will see 440 standard on these rigs within 6 months.

The cross band repeat that will allow you to acces hf from a hand held it too attractive to pass up (for me).

5713. IC-756 magazine reviews ???

I just recently came across a used AEA DSP-2232 and am very pleased with the unit. Now my buddy wants one. No new equipment dealers seem to have them in stock.

Anybody got a DSP-2232 for sale? Please reply with price, condition and location. Reply to me and I'll pass on the info.

Due to a recent purchase, I now have an extra set of KLM satellite antennas for sale.

KLM 2M-22C and KLM 435-40CX

These are the current, top of the line, models.

$200.00 plus shipping for the set.

Please reply to: lbarnett@claimsware.com

Well, now you know why. If you improve the balance of your antennas,
the ground window will make much less difference in the tuning, and your
antennas will work more like they are designed to work too.

>I still need some advice on phase II, which is getting my power
>outlets for the rig and the PC moved over to the "ground frame", or as

>ground wire from the service panel that would normally go to those
>outlet boxes?

Bring the safety wire from the entrance panel to the ground window
first and bond it there before going on to the outlet boxes. The hot
wires also must go to the ground window *first*, get suppressed there,
and then go on to your outlet boxes. Power is no different than your
coaxes in this regard. It has to go to the ground window first, then
go on to the equipment in the shack.

The VX-1 is never really off. The CPU is always scanning for a key press. When the "power key" is pressed, the CPU wakes up the rest of the radio. If the CPU is not functioning correctly, it may not be scanning the power key. You could try removing the battery, and then WHILE HOLDING IN THE POWER KEY, re-insert the battery. When power is first applied, the CPU should make at least one pass over the input keys. (You could also try holding the M/V AR keys and replacing the battery, just in case your power switch is bad!)

Good Luck.

Gary:

I have looked into building a DSP receiver. I figure four or five
ICs: RF stage, Mixer/IF stage, DSP for filtering and detection,
and an AF stage plus a microprocessor to run things.

The hard part would be programming. But what you have is a reconfigurable receiver that can have any mode added.

DSP is becoming the heart of communications. A typical CD player has a DSP chip, filter chip and audio chip. DSP is used in the audio front ends for FM broadcasting transmitters.

It would be easy to make a DSP transceiver. It would really drop the cost. Of course you have already made that point.

Setting up email and news

This section gives you some background about Internet protocols and the preference items you use to set up your email
and news services. Upcoming sections describe mail and news services in more detail.

Before you can exchange email or access any newsgroup news, you need to tell the Netscape application how to make the
appropriate connection to the server computer handling various protocol. Where your World Wide Web server uses uses
the HTTP protocol to transport page information, your outgoing and incoming Internet mail servers use mail protocols
(SMTP and POP3) and your Usenet news server uses a news protocol (NNTP).

Do you know the name of your email servers and news server? If not, you will have to find out from your service provider,
systems administrator, or resident know-it-all. After specifying the names of these servers as preference items in the
Servers panel, Netscape software lets you send and receive email and newsgroup postings.

Here are some of the preferences you can set in the Options|Mail and News panels.

In the Servers panel, specify your mail server names in the Outgoing Mail (SMTP) Server field and the
Incoming Mail (POP3) Server field. You should specify local mail servers, if available. Often, the same server
name is appropriate for both fields and the name can be as simple as mail. You should also enter your email id (the
part of your email address to the left of the @ symbol; not the entire address and without the @ symbol) in the POP
User Name field.
In the Servers panel, specify your news server name in the News (NNTP) Server field. You should specify a local
news server, if available. Often, the name can be as simple as news.
In the Identity panel, specify your name, email address (the entire address including the @ symbol), and your
reply-to address (if you want mail replies sent to a different address than your email address) in the designated
fields. This and other information provided in the panel establishes your identity to those who receive your mail and
news messages.
In the Organization panel, specify whether you want mail and news messages threaded and the method messages
are sorted. By default, news messages are threaded and mail messages are not. When messages are threaded,
replies are displayed adjacent to the original message and other replies to the original

message. When messages are
unthreaded (the box unchecked), replies are displayed according to the sorting order without regard to the position
of the original message or other replies.
In the Appearance panel, specify font characteristics of your message text and quoted text. By default, when you
reply to a message, the original text is quoted (restated) with each line preceded by the > symbol. You can specify
the style and size of the quoted text in your messages. You can also specify the layout of the window panes.
In the Composition panel, specify whether you want your replies to automatically quote the original message, and
whether you want a copy of your messages automatically sent to yourself, sent to another email address, or stored
on a disk file.

Receiving and sending email

To display the Mail window and access email features, choose Window|Netscape Mail. Or, as a shortcut, you can click
on the mail icon (the small envelope in the bottom-right of the Netscape and News windows).

When you open the Mail window, Netscape checks the server and retrieves any new mail. To receive mail, you'll have to
enter your email password each session (or specify in the Mail and News|Organization panel that your password be
remembered across sessions).

After Netscape has initially checked the mail server for messages, Netscape can periodically recheck the server and inform
you if any new messages have arrived. However, Netscape does not automatically retrieve these additional messages from
the mail server. To retrieve new messages, press the Get Mail toolbar button or click the mail icon.

A setting in the Mail and News|Servers panel determines how often Netscape automatically checks the mail server for
new messages. You can also click on the mail icon from the Mail window to manually check the server and retrieve new
messages.

Netscape informs you of the availability of new messages using the mail icon.

Before you've checked for mail (for example, before you've opened the Mail window or if you haven't supplied your
password), you'll see a question mark (?) adjacent to the envelope. This indicates Netscape cannot automatically
check the status of the mail server.
After you've check for mail, you'll see the envelope alone. This indicates there are no new messages for you.
Subsequently, when Netscape automatically checks the mail server and finds new messages for you, you'll see an
exclamation point (!) adjacent to the envelope. This indicates that new messages are

available for retrieval. On
Macintosh, you'll also be notified of new messages by a mail icon flashing in the menu bar.

The Mail window contains three panes: a mailbox pane, a message header pane, and a message pane. Click on an item in
the mailbox pane (such as the Inbox) to display the mailbox contents in the message header pane. Click on an item in the
message header field to display the message contents in the message pane.

Occasionally, you'll want to select multiple message headings, for example, to move messages to the trash. To select
multiple, contiguous message headings, hold down the Shift key as you click on an item. To select multiple, noncontiguous
message headings, hold down the Ctrl key as you click on an item. (On Macintosh, use the Shift key to select
noncontiguous items). When two or more message headings are selected, the message pane is empty.

The Mail window and the Message Composition window, described in subsequent sections, contain menu items, toolbar
buttons, and clickable icons to let you compose, view, organize, store, and deliver your mail in varied ways. Menu items
offer the full set of features. Toolbar buttons provide basic mail features such as getting mail, deleting mail, composing mail,
replying to mail, and displaying your messages. Small, clickable icons in the message header pane let you highlight
individual messages as read or unread, and flagged or unflagged.

Using the Mail window

The mailbox pane and message header pane are organized in columns. Columns in the mailbox pane state a mail folder
name, the number of unread messages it contains, and the total number of messages it contains. Columns in the message
header pane state the sender name, its flagged status, its read status, the subject line, and date.

You can resize panes by positioning your mouse between two panes (the cursor changes shape) and dragging.

You can click on column titles in the message heading pane to temporarily rearrange items according to Sender, Subject,
or Date. You can also use the View|Sort hierarchical menu to sort or thread messages so that replies are positioned
adjacent to original messages. To arrange messages to your preferred criteria by default (that is, every time you open up
the Mail window), you must set the preference items in the Mail and News|Organization panel.

You can resize columns by positioning your mouse between two column headings (the cursor changes shape) and
dragging. It's best to adjust the leftmost column first, because resizing a column repositions all the columns to the right. On
UNIX, choose Options|Save Options to retain changes.

Choose File|New Folder to display a dialog for creating a folder in the mailbox pane. You can drag messages from the
message heading pane into a folder in the mailbox pane. Alternatively, you can select a message, then use the
Message|Move hierarchical menu item to put a message into a folder. The Message|Copy item lets you put a copy of a
message into a folder without moving the original.

The Edit menu contains items for deleting selected messages and folders. Deleted items are put into a Trash folder.
Choose Empty Trash Folder to permanently delete the contents of the trash.

Here are other basic features you'll find in the Mail window:

Searching in messages: Choose the Edit|Find menu item to search for text in the message header or content
panes. When the first occurrence of matching text is found, the message is selected and displayed in the message
field. Choose Edit|Find Again for additional occurrences.
Email addresses: Choose Message|Add to Address Book to insert the address of the sender of the selected
message into your Address Book.
Marking messages: The Message menu also contains items that let you mark messages as read or unread, and
flagged or unflagged. When you wish to mark or flag multiple selections, the menu item is more convenient than
clicking on the small icons in the pane.
Navigation: The Go menu contains items for navigating among adjacent messages, unread messages, and flagged
messages.
Viewing messages: The Options menu contains items that help determine the content of the message heading and
message panes. You can specify that the message heading pane Show All Messages or Show Only Unread
Messages. You can have header information displayed within each message by checking the Show All Headers
item. Use the Document Encoding menu item if you wish to select alternative character sets. On Windows and
Macintosh, menu changes are automatically preserved for subsequent sessions. On UNIX, choose Options|Save
Options to preserve menu changes.

Using the Message Composition window

You create and send both email and newsgroup messages in the Message Composition window. Many different actions
produce the Message Composition window and, when appropriate, the Netscape application fills in certain fields
automatically.

Sometimes you'll see highlighted links in the email and news messages you read. That's because the Netscape software
automatically detects the text of a URL and converts the text to an HTML link. Any URL text

you enter in the Message
Composition window is automatically seen as a highlighted link by the recipient of your message.

Choose the File|New Mail Message menu item to display the empty Message Composition window. The window
has its own menu items, clickable buttons, and fields for your message's address, headings, and content. You can set
which fields are visible by checking items in the View menu.
Choose File|Mail Document (or File|Mail Frame) to display the Message Composition window with fields filled
and the current page automatically attached. The Content field contains the current page's URL, the Subject field
contains the page title, and the Attachment field displays the file name of the attached page.
Choose a mail or news reply option to display the window with the address field filled in. You might also reply to
pages and messages by clicking a mailto link or button.

Typically, you'll use the Send To field for the address of the primary recipient, the Cc field for additional recipients, the
Subject field for briefly describing the message, and the Attachment field for including a page or disk file with the
message. If you've specified a text file containing your signature in the Mail and News|Identity panel, your signature is
appended to the message field in all of your mailings.

You need to know the Internet mail address of where to send your email. Internet addresses typically contain a user name
followed by the @ symbol (pronounced "at"), followed by mail server location name. For example, to send email to this
company, enter info@netscape.com.

You can create, edit, and store addresses, singly or in a folder list, in the Address Book window. Addresses are
maintained in the Address Book window similarly to how bookmarks are maintained in the Bookmark window.

Commonly, you'll send mail by replying to other mail. By default, the original text appears as quoted text (each line
preceded by the > symbol), though you can turn this feature off in the Composition panel. You can also quote a message's
text by choosing the Message Composition window's File|Include Original Text menu item or paste in a clipboard
selection as quoted text by selecting Edit|Paste as Quotation.

Pressing the Attach button produces a dialog box that lets you send email with a file attachment. An attachment is a
separate document sent along with the email message. The dialog box buttons let you select a page URL or a file. You can
choose to send a page as is (embedded with the HTML instructions that format Internet pages) or converted to plain text.
After completing the dialog box (you can list multiple attachments), the attachment is

ready to be sent along with your
message.

The Mail window offers options that let you send mail immediately or defer delivery. Typically, you'll want to send
messages immediately if you're connected to the network. However, to reduce connection time, you can compose
messages offline and defer sending mail until the next time you're connected.

When the Mail window's Options|Immediate Delivery menu item is checked, the Message Composition window offers
a Send Now toolbar button and menu item (Send button on Windows and UNIX). This allows messages you've written to
be sent over the network immediately. Press the Send Now button or choose File|Send Now to transmit the message and
any attachments to the recipient.

When the Mail window's Options|Deferred Delivery menu item is checked, the Message Composition window offers a
Send Later toolbar button and menu item (Send button on Windows; Later button on UNIX). This allows messages
you've written to be stored in your Outbox folder (deferred) until you explicitly specify that the contents of the Outbox be
sent. Press the Send Later button or choose File|Send Later to store the current message in the Outbox folder on your
disk for transmission at a later time. Choose File|Send Mail in Outbox to distribute deferred messages.

Receiving and sending news

To display the News window, choose Window|Netscape News. The News window operates similarly to the Mail
window. If you skipped the previous pages on exchanging and composing mail, you might want to go back and read these
now. Like mail, you create your news messages in the Message Composition window.

People post messages (send their news) to newsgroups. Throughout the Internet, you'll find the newsgroup terms
"message", "posting", and "article" used interchangeably.

Newsgroups are organized by subject; each newsgroup has a name intended to reflect the topic of discussion for its
messages. The Usenet is the collection of all newsgroups; it is the Internet's multifaceted bulletin board especially designed
for people to communicate news with one another on special interest topics.

The News window contains three panes: a newsgroup pane, a message header pane, and a message pane. Click on an
item in the newsgroup pane to display a listing of messages in the message header pane. Click on an item in the message
header field to display each message in the message pane.

When you open the News window, the set of newsgroups you have specified in the Options menu is displayed in the

newsgroup pane. You can choose the Show All Newsgroups menu item to see the broadest selection of available groups.
However, the number of newsgroups is so large that you might prefer to limit your newsgroup pane to subscribed
newsgroups.

You can quickly access your favorite newsgroups without searching through the thousands of available groups by
subscribing to newsgroups. The easiest way to subscribe to a newsgroup is to, first, display all newsgroups (choose
Options|Show All Newsgroups) in the newsgroup pane, then locate each newsgroup you want ready access to and
check the Subscribe check box beside the newsgroup name.

After you subscribe to your favorite newsgroups, you can choose the Options|Show Subscribed Newsgroups or
Options|Show Active Newsgroups menu item so that, each time you open the News window, the newsgroup pane
displays only your chosen newsgroups. Active newsgroups are subscribed newsgroups that contain new messages.

There are alternative ways to subscribe if you know a newsgroup's URL. Each of the following displays the newsgroup
name in the newsgroup pane.

Enter the newsgroup URL in the location field of the Netscape main window.
Choose File|Add Newsgroup and type the newsgroup URL in a dialog box.
Click on a link to a newsgroup or newsgroup message.

You still must check the Subscribe box if you want the newsgroup to be displayed in the pane in subsequent news
sessions.

5741. FREEWARE CHAPARRAL MC115 !!

I have several 8877's that I have come by in a trade. They are good full power medical pulls. The going price for good pulls is $250. and that is what I am asking. I expect to be getting a near-nos 8877 (older stock tube, out of the box only to test, then right back in the box), asking $500. for that one. Asking prices are plus shipping. -- 73, DavidC AA1FA E-mail or call: 603-894-1174

5746. Re: Regency HR-2A & B Crystal Compatibility

The HR-2A uses the following: TRANSMIT: XMIT FREQ/ 24 - example:
146.94/24 = 6.1225 MHZ

RECEIVE: (receive freq. - 10.7)/ 3 - example: (146.94 - 10.7)/ 3 =
45.41333 MHZ

This informatin taken from Section 1.8 Crystal Specifications of Service
Manual for HR-2A.

Source record: 149080

Will trade you 150 feet of 7/8 air dielectric plus microwave quality "N" connectors that I have for 150 feet of 3/4" foam dielectric with "N" connectors that you have. My connectors are the ones with the little screw fittings for trimming the SWR (I think). This will have to be pickup only, because of size and weight, in Myrtle Beach, SC. Will consider outright sale for enough cash to purchase the stuff I need. Can deliver to Winston-Salem N.C. area the first week of April.

I've seen the connectors I have in a catalog- and they sell for about $300 apiece- so don't go offering me $100 for the stuff- you won't even get a return e-mail!

From March 1959 QST - Letters:

Quote:

Editor QST:

All hams know that 11 meters is no longer an amateur band, but few know what its new use is or how it might be an even better "ham-band" than it used to be.

The major portion of the band was divided into 22 channels for two-way communications use under the new Class D Citizens' Rules. Basically the rules are as follows: no operator's license is needed; a station license is necessary, but it may be obtained by filling out a simple form; the license is for equipment only and all units are classified mobile; 0.005T frequencey tolerance; t watts maximum power, a.m. only; lea-in 25 feet maximum.

Most hams don't see the possibilites that this presents. First of all, equipment can be home-built. As five watts is the power limit, there can't be any "millionaire stations" drowning you out. All units will be on the same basis. Furthermore, since no operator's license is needed, the wife can use the rig and so can the kids.

As for crowded channels, tone-modulation is permitted to operate squelch systems; you can't do this on the ham bands. There will be a good deal of experimenting to get a feceiver that will dig down for the weak signals. Conversations are allowed with all stations and there isn't any law stopping you from having channel switching. In the real ham spirit, there will be many more chances for helping out the outher guy in both relaying messages when he is out of rang with his home station and in giving help with repairs. A second class phone license will be needed for servicing or aligning the equipment, but any ham shoul d have little trouble passing this test.

Just imagine: no more kilowatt interference, no more multi-kilobuck rigs and no more swishing v.f.o.s! I don't know about the rest of hamdom, but I've filed for my Class-D license and have started on the new rig.

For the full rules and regulations drop a dime in an envelope along with a request for a copy of FCC Rules, Part 19, to the Superintendent of Documents, Government Printing Office, Washington 25, D.C. See you on 11.

--Arthur Human, W2HQQ/1

:End Quote

The thing about this letter that amazed me the most.. was you could get something from the government printing office for a dime, and second you could put a dime in an envelope and it would not be stolen before it reached it's destination..

As to Arthurs opinions... wouldn't it have been nice if "CB" turned out the way he envisioned it.. according to the FCC Database Arthur is now living in Florida and still has a valid license.. If your reading this Arthur... I'd love to hear your thoughts today :)

And a few "Stray" for those of you who asked :)

"The seven-year-old girl called out to her mother, "mom, you'll have to shut off that food mixer because you're bothering Mr. Moody's (K4VFM) short-wave radio. I just heard him sa so on the television." K4VMT."

"When G3LWS (also ex-ZC4FB) was operating from the South Shetlands as VP8CZ several years ago, he discovered one day (after having successfully maintained schedules with the rest of the world for 12 months) that there was a six-inch gap in what were supposed to be feed-through insulators carrying the antenna through the wall of the building. So, except for some sort of capacity coupling through that gap, he was in effect operating with an antenna that consisted of about 18 inches of wire between the transmitter and the inside end of the feed-through insulator."

Enjoy :)

Tom

I am trying to get a Dentron MLA-2500 amp working correctly. Have some questions. Driving it with a FT-1000D

Book talks about maybe needing to remove swamping resister (R1) if you are running a solid state rig. Thats all it says. Gives you no clue as to what you would notice so you would know to remove the input swamping resistor.

What should I see driving it with say 130 watts in. The grid ma never goes above 50ma no matter what I do. Book says to keep it under 200ma. Need general info on running this amp. Power in/out. Typical plate/grid ma etc.

Should I cut out swamping resister. Not enough info in manual (typical operating characteristics etc).

5758. Small Power HT's? Worth it?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-26 00:00:00 UTC
From: cwbuckle@mtu.edu
Message-ID: <6ff32c$k77@login.ee>
Source record: 149090

I've been looking at alot of the micro HT's, the alinco ones in particular, which come in both a VHF and a UHF model. My question is this: Are these things worth the money? I mean, is 200-300mW going to be practical for everyday use? Am I going to be able to hit the LOCAL repeaters with these, from 2-4 miles away?

Any input would be appreciated. I think it just may make for good discussion too..

73,

Chris Buckely

At the risk of stating the obvious...on some of the VX-1Rs, the power
switch is VERY hard to push. First time I played with one at HRO,
it took me several minutes of fiddling before I got up the courage
to push the button REALLY HARD to turn it on.
Also, you have to hold it in longer than I thought I should to make
it work.

The straight d-104 is approx. $70.00 but if this is the "TRUE SILVER
EAGLE" WITH THE EAGLE IN BACK THOSE ARE HIGHER IN PRICE. There also
was the "GOLDEN EAGLE" which also has the eagle in back was very high
priced. The golden eagle is no longer made and I don,t think the silver
is either. The d-104 is the same amplified or not just the eagles are
higher and also collector mics more so the golden eagle. There a
exellent microphone. MIKE S.........
This is my two cents worth.

5762. Re: Small Power HT's? Worth it?

Chris,

I have a VX1 and it works pretty well at 500 mw into the local repeaters, but by far the best way to use it is to cross band through a mobile rig. For this use, these small HT's are fabulous. You receive on 2M but transmit on 450 and have your mobile or shack rig repeat from 450 back to 2M on the input of the repeater. (BEFORE you do this I suggest making sure that the frequency on 450 is coordinated for this kind of use. Also, use CTCSS decode on 450 and for most radios in crossband mode you will need CTCSS decode on 2M as well so the crossbanding rig will not think there is a signal on the 2M side and prevent you from crossbanding over it. (that signal is the tail of the 2M repeater) or you will need to have the repeaters input frequency programmed as a single memory channel, simplex. Problem with setting up simplex channels for cross banding is you can only use them for that, but if you use CTSS decode on 2M you can use the same memory channel for normal repeater operation by turning CTCSS off. I know this is confusing. Repeater ID is necessary as well, but this can be voice.

The 2M only versions are much less useful unless you know you are in a solid coverage area most of the time. One thing they are great for is communicating between cars to other hams. My xyl is a ham and we do this a lot. They are not so good inside stores or malls because 2M seems to be a common area for rf junk. Also, inside malls you tend to need a lot more power because of the construction.

The 450 only versions can be used for cross banding to repeaters with very short squelch tails where the mobile/shack repeater is repeating in both directions to a 450 simplex frequency. Problem is most repeaters have long squelch tails.

A friend of mine who lives in a location to die for uses his VX1 routinely on low power and is always full quieting, but most of us live closer to the ground.

As for the general purpose do anything HT, my choice is the FT-50. It's got high power and most of the features except cross band repeat that you will ever use. We have several and they are rugged. Also 5W gives you great punch when you need it, and the battery life is excellent.

./Len

The S2001A is a Japanese version of the 6146B(and a better tube). It has
not been available for abt 10 yrs now. You may use 6146B's in the radio
with no ill effects. Try to get a set of the ECG/GE 6146B's, they seem
to work best.

Hello All, I too went thru this Problem.
I don't know, maybe its me, but if your going to all the trouble
of sticking a sticker on a pamphlet, why not just stick it
ON THE DISK itself !

(that way if you misplace the number your really screwed cause
the disk is missing too !!!)

In practice I ALWAYS take a fine point sharpie and print the
reg #'s etc on all cd's and disks. I never lose them that way.
Also the fine point sharpie has never damaged the media, and
I've been doing this for years.

>Yaesu just sent me a replacement button for the FT50 (new version is
>shorter to prevent acc turn-on of radio)
>
>Ok, so what are the steps to disassemble the radio to swap the power
>button??

To get at the power switch:

Remove the battery.

Carefully remove the black NiCd label from the back of the radio
chassis. This label is part of the radio's water-resistant shell,
believe it or not, so don't damage the adhesive on it.

Under the label are two screws. Back the screws out several turns,
but not all the way. Then gently press on the screws. This will
push the keypad out the front of the radio. Carefully hold the keypad
and its gasket, then remove the screws the rest of the way and remove
the keypad.

Remove the antenna and knobs from the top of the radio. At this point,
there are no more screws holding the radio chassis inside its plastic
case, but there are a couple of little metal tabs on the chassis that
engage cutouts in the plastic case. These tabs are at about the level
of the (now removed) black NiCd label. Spread the sides of the plastic
case slightly to help these tabs pop out, while using another finger
inserted through the keypad hole to push the lower part of the metal
chassis readwards. The lower part of the chassis should push back
out of the plastic outer case fairly easily.

Once the chassis has been pushed out at the bottom, you can slide it
downwards so the knob shafts and SMA connector clears the plastic case.
Also make sure that the PTT/mon/light rubber buttons don't get caught
on the exiting chassis.

At this point, the radio is apart. The power button is probably still
sitting in the front of the plastic housing. Just replace it with the
shorter one.

Now you need to put things back together. To make it easier, the
rubber "light pipe" that carries light from the red/green LED up to
the top of the case can be removed. Then put everything back together
in reverse order of taking it apart, making sure that none of the sealing
gaskets gets pinched somewhere it isn't supposed to be, and all of the
gasket sealing surfaces are clean.

Once everything else is back together, the rubber light pipe can be pushed into place from outside the case. This is easier than trying to align it with the right hole in the chassis while re-installing it.

When it's all back together (remember the NiCd sticker!) it should work exactly as before - with the exception that the power button is now about 1 mm shorter.

Dave

From: troy walker <tdwalker@se-iowa.net>
Message-ID: <351B2171.DD53729D@se-iowa.net>
Source record: 149103

HELLO,
I received my 847 on the 25th, and it is really a nice unit.
there are as with any radio some things I don't like such
as the fan that runs as soon as it is turned on. It doesn't
appear to receive on both the main and sub sides at the
same time.(bummer). then there is the question of the rig
doing cross band repeat? it will only do so one-way repeat! (not a lot
of use)
I find the receiver to be as good or better than the 900/cat.
some may not think so, but I am pleased as it was designed for
satellite operation, and for that it is probably the best thing out
there.
well I cant get into a lot of detail as I just received it yesterday
and have not really played it enough to knock it to hard!
as I say overall it is a great radio.......

5772. FS: 1 5/8" Andrew Hardline coax LDF7 50 ohm

Source record: 149154

Hi Gang,

I have for sale 4 runs of Andrew LDF7 50 ohm 1 5/8" coaxial hardline.

3 runs of approximately 300' each. These were removed by a professional tower crew from a cellular tower. The coax was removed because the antennas were lowered from 400' to 100'. These runs have some red and white tower paint on them. They are all in good shape and are undamaged. The ends were sealed at the time of removal from the tower $2.00 per foot obo.

1 run of approximately 200' that is still on the reel and has never been used $3.00 per foot obo.

The boss said get rid of all that coax so it has to go. None of these runs have connectors. I'm located in Des Moines, Iowa and I would prefer pickup on all of these or I can arrange for shipping at the buyer's expense. I will accept Postal money order or cash.

Please email for more details if you like. Thanks and 73,

Al

I have for sale an Icom BC-35 fast charger for the BP-7 battery pack. charger works fine, but it missing 2 of the four screws for cover(no big deal). Asking $35, plus shipping costs, or would trade for a Kenwood TU-35 toneboard for a Kenwood TR-2600A, or an HF antenna tuner w/a meter on it(must do at least 300 watts). E-mail spamsonite@hotmail.com for details.

`73 and good DXing,
Sam, KB8ZZS.

That's funny, by your own admission on my posting to try and sell this same radio, you commented it was only WORTH $500, even in MINT condition.

Gee, I wonder why you are now asking $150 more than what you yourself said the radio is worth. I believe this is an excellent example of your lack of integrity. Accordingly, all potential buyers of anything that you have to sell now, and in the future, should be more cautious. Have a good day!

Yeah, but it is a classic analog radio design. Cost can be reduced
by using a more modern digital approach.

Looks like a reduced cost standard analog radio. The selectivity specs
don't look good at all, and 10 Hz tuning steps are a bit crude for today's
digital modes. Still, it almost makes the target price, and it is 100 watts.

5794. SB-200 / FT-757GX Connection

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-26 00:00:00 UTC
From: martyt@pobox.com
Message-ID: <351a6931.232893082@news.supernews.net>
Source record: 149176

Trying to connect my newly acquired SB-200 to my Yaesu FT-757GX. This is my first linear amp, so I'm pretty much shooting in the dark here... ;-)

First problem:

The docs on the SB-200 say the ALC voltage peaks at 10V - but the manual for the Yaesu says 5V is the max it can handle. Is this a problem, or should I just not worry about connecting the ALC? Seems like I've read somewhere that a transceiver that only puts out 100W isn't really capable of overdriving a linear, so there's no need for the ALC. What say you?

Second problem:

I've installed Harbach's "Soft Key" which presents about 1V and 1.5ma at the antenna relay jack - if I understand things correctly, this should allow me to directly connect the PTT jack on the 757GX to the antenna relay jack on the SB-200.

Problem is, when I connect it like that, even with the amplifier turned off, the 757GX keys up. In fact, I've found that I can use my finger to short between the center and shield of an RCA plug connected to the PTT jack and cause the rig to key up - do I have a malfunction in the rig that needs to be taken care of?

Thanks for any help

-Marty KI0LO

>the time.

A lot of hams cut their teeth on the old Galaxy. I did. It was a lot
more stable than a lot of the tube equipment out there in the same
price class (much better than my NC190 drift-o-matic), it packed
an astonishing 400 watt PEP (input) rating into a small (for its day)
box, and it was *cheap*. Selectivity wasn't great, third order intercept
was wretched, etc, but it sufficed as a cheap way to go SSB mobile
in the tube days. Its only real competition was the KWM-2 and the
TR-3, both of which were much more expensive.

Today, even the cheapest rig will be synthesized, so drift is no
longer an issue. If they follow my suggestion to go to DSP early
in the radio, selectivity as sharp as you desire will be just a
firmware upgrade away. Dynamic range may be less than a
top of the line radio, but hey, what do you expect for 500 of
today's dollarettes?

Cross-posted to: rec.radio.shortwave,rec.radio.amateur.equipment,rec.aviation.student,rec.radio.amateur.misc

I would like to be able to listen to communications from a local general aviation tower. These broadcasts are in the 120 MHz frequency range, but my shortwave radio (Lowe HF-150) receives only in the 30 kHz to 30 MHz range. Rather than buy another receiver I want to know if there is a way I can use my current receiver to pick up frequencies higher than it normally tunes. I seem to recall radio products that you attach to your antenna that convert from higher to lower frequencies or vise versa. Or is there some other simple way in which I can modify my receiver?

Thanks,

M. Lamphier

>serious hf radio.

Quad conversion probably means that Icom didn't do their design homework
properly (more conversions than necessary is not a good thing). And the on-board
antenna tuner has a very limited matching range. But the IC-746 is certainly
aimed at those who want a step up from an IC-706 for a small HF/2m radio.

> ---- Steve N9ROU

I expect the main mode on P3D will be L band up and S band down (that's
what AMSAT has been telling us for the last couple of years). The FT-847
can't do either 1.2 GHz or 2.3 GHz. It can do the old mode B, but that isn't
likely to be activated very often on P3D according to AMSAT statements.
The FT847 should be fine for the microsats, for Oscar 10 for however much
longer it works, and for the Russian mode A sats. But for P3D, it looks like
you'll still need transverters. I haven't seen anything that says it has
provision for working with transverters.

Note, the FT-847 looks interesting, but I don't think it is the ultimate one
box solution.

>Subject: Re: Icom 706 MII & Antenna Tuner

I understand your situation, but the last place i would skimp on a mobile installation is the antenna, would you buy a thousand dollarr stereo and then put a small set of inefficient and inaccurate speakers on it? I hope not. And never ever would i run a tuner in a mobile installation. Might as well hook it up to a dummy load, unless all you want to do is listen. Do yourself a favor and don't skimp on the antenna, speaking from experience.

A word to the wise,"DON"T". Many of the setting require specific pieces
of test equipment to set. Also some of the setting are overwritten when
you start a specific adjustment and cannot be recovered. So without the
equipment you are lost and so is the radio.

If you just have to get into it at least buy the service manual so you
know what you are screwing up.

Hi there
I have for sale a brand new Icom IC-W32A dual band ht with a
CP-12L cigarette lighter power adapter, HM-46 microphone, BP-180 battery and
instruction manual. Here are some specs:
true dual band receive V/V, V/U or U/U
crossband repeater mode
receives from 118 to 174 and 400 to 470 normally
receive range can be expanded by a simple keypad sequence
I get cellular images perfectly from 600 to 999.995 mhz
200 alphanumeric 8 character memories
backlighted keypad
full CTCSS transmit and receive and scan to identify while receiving
can be programmed by computer, software included
transmit frequency range expandable by a simple hardware mod
5 watts output with 12 volts D.C. or BP-173 battery
3.5 watts output with included BP-180 battery
power saver mode and auto power off function
tone scan, tone squelch and pocket beep operation
dtmf memory
auto repeater function
A check of HRO puts the price at over $400. with the included accessories.
I will let it go for the best offer over $300. U.S. shipping included by
airmail. I cannot ship c.o.d. from Canada to the U.S., other arrangements
can be made.
Still on warranty for one year, this is new equipment.
If interested, contact me by email.

>Thanks,

It is theoretically possible to receive a signal, mix it with a local
oscillator and downshift in frequency. But it is not something you can
assemble in your kitchen for a couple of bucks. Furthermore, you need an
accurate oscillator, preferably with a digital readout. I don't think it is
worth your time to mess around with it. You can buy a good scanner with an
aviation band for about $150. It has all kinds of features you will find
useful.

Uniden Bearcat BC 100xlt Handheld Scanner

Features: -New NiCd Battery Pack
-(1) VHF Rubberduck Antenna
-(1) UHF Rubberduck Antenna
-Earphone (extra length)
-Wall Charger
-Original Case

Radio Features -100 Channels
-10 Ch./bank, 10 banks
-Weather Search
-29-54, 118-174, 406-512 Mhz
-Band Search

The radio has had some use and I'm proud to say, I've taken good care of it over the years. Everything works perfectly.

I'm asking $100.00 for this beauty. It is a very useful radio and will give you more years of quality scanning.

Please EMAIL me or CALL me at (305)895-4355 between the hours of 10:00am & 9:00pm.

73,
Bill

>KF4WCL

---------- I have a PS50 which is 20 A continuous. I have literature that shows a PS-430 but not a PS 30.

The PS-430 is considered a standard supply with 20 A INTERMITTENT.

I quote:

"The PS-430 is a regulated DC power supply with high current capability. The output is 13.8 VDC/20 A (intermittent). Since terminals for 13.8 VDC/10 A are also provided, in addition to an output power cable for use with the TS-440S, the PS-430 can be used as the power source for another low power mobile transceiver such as a 2-meter rig"

Hope this helps you,

Source record: 149198

I'm looking for a QRP CW transmitter for 80, 40, and possibly 20M. It can be homebrew, if clean and fully functional, or some form of kit or commercial product.

It needs to be pre-built and fully working, since I don't do much construction anymore, and VFO tunable, so I won't have to rely on rocks. Power level between 2-10W is desirable.

Please respond with a complete description of the rig, condition, features, power requirements, and price shipped to 75010.

I73,

Ron Ricketts

The Kenwood R2000, and R5000 along with the Yaesu FRG8800 had optional
VHF converters. I don't know if it would be possible to make use of one
of these converters for your Lowe HF-150. Might be something to look into.

Hi there
Open the top cover, cut the green jumper marked W1, turn the radio on
doing a complete reset. It will transmit everywhere it receives on FM but
not in the aircraft band. You will lose your memory data doing the reset so
take a note of what you have programmed in it. Good luck.

Source record: 148954

I have the Alinco DJ-S41, and live three miles from a repeater. The repeater's antenna is on an eighty foot tower. I use the talkie to access the repeater, and the other end is hard pressed to know if I am using the 340 mw, or the 10 mw power output.

440 MHz will surprise some. It is amazing (to me), what can be done with very little power. I can consistently activate this repeater, nine miles out atop a hill. I have to get much closer to carry on a QSO, so don't take this the wrong way.

I don't know if this would be a consideration, but I like the fact that the Alinco operates from three AA batteries. My first set lasted six days. The radio was used to QSO, rather than only monitor, and the 340 mw power was mostly used. I'm sure they will last much longer, if the 10 mw power is used.

5827. Re: IC-706 Remote Programming Commands

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-27 00:00:00 UTC
From: Dave Bernstein <dhb@mediaone.net>
Message-ID: <351C8212.A2EE9939@mediaone.net>
Source record: 148955

Command 03 directs the radio to report its frequency, and command 04
directs it to report its mode and filter settings. Neither of these
commands are mentioned in the 706 manual, but both are documented in
Icon's CI-V reference manual. You'll need commands 03 and 04 to poll for
status, unless you've only got one radio on your CI-V bus and can thus
configure it to broadcast frequency and mode changes automatically. See
http://www.ambersoft.com/Amateur_Radio/Icom_Control.htm for details.

>NEW AR8000,shipped $404>>>see the URL
>http://www.multicomm2000.com/page3.htm

Come on guys, stop posting this BS. Sure, you can buy a new AR8000 (unblocked) from Multicomm in England for $404, but it's NOT legal to import it into the U.S. because they're banned here...only the AR8000B is legal because it can't be modified to receive cellular phone frequencies.

Yes, Multicomm will ship it here, but that still doesn't make it legal and you take a real chance it will be confiscated by the Feds before you get it...maybe even after you get it if the Feds start to investigate this illegal activity and get a hold of Multicomm's shipping lists. Knock knock...who's there? ;)

However, it is legal to buy units that were imported BEFORE the ban. That's why used models command higher prices...they're worth it because you can legally own them.

Lets compare apples to apples....okay?

Thanks.

Well I parted with mine (Money that is) and I have had the rig about a week now. Made a couple of contacts on 10, 2ssb, 6 and listened around on SW. One thing I can say is I won't part with the radio.

I have found a few wierd things. A typo in the manual on page 52 which referrs to another page (See page ??). I guess they rushed the editing.

The other is if your using the RIT and have a tsql tone set and press the clear button to clear the RIT, it does and the TSQL setting to. But then when do you use RIT and tone squelch together.

The RF Gain/Squelch is neat, but I reset mine to squelch only and rf gain to max.

I have gotten nothing but good reports on the transmit audio, which on SSB you can set the tone quality.

It has switchable ssb filters at the IF stage unlike the Yaesu 847. It come standard with a 2.8 or 2.5 or something.

I don't like the voice compression control as a reset pot on the back panel, but how often to you change that control.

The internal Memo keyer is a nice feature especially for you cw contest folks. The display is big and very easy to read from across the shack.

Has a great receiver from what I can tell so far. Preamp works well to.

The tuner is helpful and is able to match my Comet GP-15 with a 3.6 SWR to 1.1 at 50.140 so I can use it on SSB. The tuner doesn't work with 2m.

In my opinion you don't need to worry about being as crazy as me, the radio is great.

Source record: 149029

I got this word of mouth....and I tried it on my brand new IC-T8A....less than a week old!
This information does not come with any warranty implied or expressed, and will obviously violate your warranty on the radio....I am not responsible, in any way, shape manner or form for you actions....period...

1. Remove battery (If this step is challenging, stop...do not proceed...I mean it!)

2. Remove antenna, and speaker/microphone rubber "boot" (The silly little thing that keeps the holes on the top of the radio from filling with water.

3. Remove the tuning know on the top of the radio by gently pulling it up.

4. The SMA connector for the antenna is held in with a little nut....I'm not sure what the correct tool is for it, but I used the points of a needle nose pliers to remove it...it turns counter-clockwise.

5. Holding the radio in your left (or right) hand, with the back of the radio facing you,
notice the two little black screws at the bottom of the battery compartment. Remove
them, making sure not to lose them....

6. Nervous yet? I was....I don't normally have trouble with this type of thing...

7. Hold the radio in one hand "face down"...gently pull up on the bottom edge of the back of the radio...(a great handle is the little aluminum rectangle painted black on the bottom of the radio, and still silver inside the battery compartment)

8. The radio should slip out of the case, bottom edge first, with the tuning knob shaft and the SMA connector still attached to the radio....you should also notice a little "rubber band" type of O ring around the frame of the radio....if it becomes misaligned, it will be very difficult to assemble the radio.

9. stop for a moment and marvel at the engineering....inside the case is the speaker, still firmly attached...it makes contact through two circuit board pads when the radio is installed....all of the "buttons" on the case short out conductive traces on the radio circuit board....pretty cool, eh? (probably designed by a guy/gal who did cellular phone stuff....)

10. View the circuit board from the "top" side...that is the side that was inside the case...not the "back" side, the heatsink and battery terminals.....

11. You should easily notice the LCD display....if you cannot identify an LCD display, STOP NOW.....PLEASE.....Try and reverse the steps and put your radio back together......

12. To the left of the LCD display, you should find three surface mount, three legged components...another good landmark is the Transmit/Receive LED that is mounted on the board.....it's located down and to the left of the LCD...(assuming you are holding the radio in your hand with the antenna connector facing up)....

13. Note: there may NOT be THREE little three legged guys installed if you radio is NOT a U.S. version...at any rate, there is only one device we care about....

14. The diode (I know they have THREE legs, but they really are diodes) we need to remove is located as far LEFT of the LCD as possible, just ABOVE the white looking surface mount component that is the Transmit/Receive LED...if you study the other positions carefully, you'll notice that the diode we wish to remove is even oriented differently than the others...

15. Remove the diode....good luck, without the right tools....although, a friend of mine who did this simply destroyed the device with a pair of side cutters......
I wish you well, but I'm NOT RESPONSIBLE!!!!!

16. Put the radio back together...have a nice day....

regards

5856. Midland radio?

Help!
Our search and rescue group has a number of Midland Model 70-441B
radios.
We would like to be able to program the ourselves but we lack the
necessary hardware\software.
Any help would be appreciated.

dprimmer@eoni.com

Lot of 10 NEW 14 volt grain of wheat light bulbs. Most rigs use 12
volters. These are 14 volters and put out just about the same amount
of light on 12 volts as the 12 volters do. They should last virtually
forever once replaced in your rig. This voltage is quite hard to find.
Mostly one ends up using 12 volters only to have to replace them again
in a short time. I found these at Dayton one year and bought up all
the guy had. Lot of 10 grain of wheat bulbs $15 postage paid to you.
Email me if interested. Also have some of these up on eBay if you want
to play the auction bidding game.

Message-ID: <KqNS.393$PR4.4222513@carnaval.risq.qc.ca>
Source record: 149042

Hi there
I have for sale a brand new Icom IC-W32A dual band ht with a
CP-12L cigarette lighter power adapter, HM-46 microphone, BP-180 battery and
instruction manual. Here are some specs:
true dual band receive V/V, V/U or U/U
crossband repeater mode
receives from 118 to 174 and 400 to 470 normally
receive range can be expanded by a simple keypad sequence
I get cellular images perfectly from 600 to 999.995 mhz
200 alphanumeric 8 character memories
backlighted keypad
full CTCSS transmit and receive and scan to identify while receiving
can be programmed by computer, software included
transmit frequency range expandable by a simple hardware mod
5 watts output with 12 volts D.C. or BP-173 battery
3.5 watts output with included BP-180 battery
power saver mode and auto power off function
tone scan, tone squelch and pocket beep operation
dtmf memory
auto repeater function
A check of HRO puts the price at over $400. with the included accessories.

I will let it go for the best offer over $300. U.S. shipping included by
airmail. I cannot ship c.o.d. from Canada to the U.S., other arrangements
can be made.
Still on warranty for one year, this is new equipment.
If interested, contact me by email.

It is an analog set because it processes the signal with all analog circuitry.
A modern design digitizes the signal as close to the front end as possible
and does all signal filtering and demodulation in software.

>other simple way in which I can modify my receiver?

Sure. What you need is called a converter. This is just a fixed frequency
oscillator and mixer which translates one frequency range to another.
In your case, you want to translate the 118 MHz to 130 MHz range to
18 MHz to 30 MHz. To do that, you need a 100 MHz crystal oscillator
and a broadband VHF mixer (a MiniCircuits SBL-1 will do nicely).

You can totally homebrew this converter if you like, or you can buy a
kit from Hamtronics, or you can buy an assembled and tested converter
from a number of vendors. They get about $70 to $100 for one, though,
and you can build one for about $25.

Alternatively, nearly any scanner will cover this range directly, and isn't
much more expensive than an assembled converter. It'll do a lot more
than just receive aircraft too.

I'm in need of a 2M Mobile unit... I'm leasing my car so I can't really screw a bunch of holes in it to mount a 2M rig. The car is a 98 Blazer... and there is no good place to mount a rig other than on top of the dash or under the seat... can't put it on top of the dash so.. need a 2M righ with detatachable front panel...

Ideally I'd like a Standard C1208A, where all the works are in the Spkr/Mic... if anybody has a 1208A they want to sell for a reasonable price please let me know...

I'd also be willing to go with any other rig that has a detatachable front panel.

So... what does this mod do? Did you hear it from a "reliable" source. Did the mod work on your radio?

Hello all,

I have started a 50.400 AM net on Friday nights at 19:00 PDT.
It is run from Saugus Ca DM04rk by KC6WFS Dave Booth.

I'll be using a Gonset G-50 to a ARX-6.

If you are not sure if there is a net in your area check my net page.

http://www.geocities.com/Hollywood/5860/nets.html
I have a up to date list of 6m AM nets.

If you live in the local area please join in on the net.

Thanks,

Dave Booth KC6WFS DM04rk
http://www.geocities.com/Hollywood/5860/50am.html

5883. Need info on Ten-Tec 560 Corsair

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-27 00:00:00 UTC
From: k5dh@rtis.ray.com
Message-ID: <6fgltv$7nh@sf18.dseg.ti.com>
Source record: 149107

I just bought a super-clean Ten-Tec 560 Corsair. I'm looking for an original Ten-Tec sale brochure for this rig. I'm also wondering what options and accessories were offered for the Corsair (I'm sure the brochure would answer that question!). Does anyone have one of the original brochures that they could spare me, or at least make a clean copy of for me?

My Corsair has 1.8 KHz, 500 Hz, and 250 Hz 2nd i-f filters, and some kind of 8-pole filter in the 1st i-f. What else was available as an option for this rig? I know there was a matching power supply and a matching external VFO, and probably the usual assortment of keyers, microphones, and such.

Are there any worthwhile mods and upgrades for this rig? I operate 99.99 percent CW, and mostly QRP at that.

Dean, K5DH

You might want to make sure that 430mhz covers the frequencies you
want to use. I could be wrong, but most uhf repeaters are 440-450mhz.
The 847 as is isn't supposed to go there, rather 430-440. But then I
don't have one of those.

On 25 Mar 1998 12:46:32 GMT, Tom Nicastri <tnic@IDT.NET> wrote:

I have been cleaning out the estate of ham friend and ran across a new pair of Eimac Y-427 tubes with Hewlett-Packard part number stickers on the boxes (1921-0046). They are a "lighthgouse" type device, looking like a small 2C39. I suspect they were used in UHF or microwave test equipment.

Does anyone know what piece of HP gear this went into? Can anyone use them? If so, make an offer. I know how hard it is to get exotic tubes for some of the old test equipment so would like to see them used.

Source record: 149148

I have a KAAR TR222A Sealion Radio Telephone I would like to convert to ham service. The unit is a ship to shore xceiver running just over 2mhz. Does anyone have schematics and manuals or can suggest where to look for them? I have contacted a few local marine radio shops who recall the unit went out of production about 25 years ago but none have the manuals. My biggest question is what B+ voltage is it running on? It has 2 807's modulating 3 807's with a common B+ modulation transformer. This might be enough to get me started. Please email @ tjb94002@uconnvm.uconn.edu. Thanks. Ted. N1XLW.

IC-T8A absolutely cannot receive anything below 50 MHz, so don't break your new radio trying to modify it. CPU won't accept freqs below 50 MHz, and I doubt that the PLL circuit would lock very far below 6m.

I like the Motorola chip set. But then I have the C++ cross compiler.
That is a good point, I will have to get a development board to test.

I ment application books. My mind went off on another direction.

>

What is the model number? Some of the Unidens are PC programmable through the mic jack, while older ones require a propriatory prom burner from Uniden. (The PC programmable variety needs a propriatory interface box from the seriel port to mic jack)

From what I can recall, the PC software will not allow freqs below 450, and the prom burner is band selectable to START at 450 (Never tried programming a lower frequency.)

We see these Unidens from time to time in the shop I work in. Let me know the model number of the radio and I'll provide you with more info.

5955. Yaesu speakers

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-28 00:00:00 UTC
From: Joe Morris <morris@unc.edu>
Message-ID: <Pine.GSO.3.96.980328230519.6215G-100000@titan.oit.unc.edu>
Source record: 148879

Probably a trivial topic, but trying to get some feedback here. I'm getting ready to install a new Yaesu FT-8500 in my car. One of my concerns is what kind of speaker to use. I noted that the SP-7 was recommended and noticed other small speakers out there.

I plan on mounting the speaker on the backside of my center console, with the speaker facing up. That way the speaker will be close ot my ear and make it easier to listen to without turning it way up. I want something compact, but also decent looking in my car.

I was looking at the SP-3 which seems to be somewhat compact. I know there are other similar models, but I have no specs on any of their speakers. Does anyone have any information on these Yaesu speakers? Am I totally nuts for trying to stick with Yaesu which was recommended?

Thanks for your comments. I will provide a summary back to this group if I get enough responses. Take care...

Joe Morris - morris@unc.edu - http://sunsite.unc.edu/morris

Source record: 148907

Chris,
I purchased the DJ-S11 (2M version) about a month ago for $88 bucks from Tech America and love it. I am fortunate to live less than a mile a way from from one machine, and have no problems full quieting it. I also can get into 2 other repeaters, one has a sattellite receiver link about 8 miles away and the other is up high on a mountain about 25 miles away. I must admit that I have a pretty good QTH, not on top of a mountain or anything like that, but fairly high in comparison to the local terrain. Also, the HT can be easily modified to expand the receive capability form 137-173 MHz. This allows you use the radio as a scanner as well. I use mine mostly for listening in the house, and also take it with me when I do my daily walking. I wouldn't recommend this radio as your main 2M rig, but for 88 bucks I think it is well worth the money.
Just my 2 cents. Hope this helps.

FYI,

I had to also remove the message [Remove...] top reply. YOu may want to fix that!

You said:

> I believe that an Antenna Tuner is an option at around $250ish dollars
> for the FT-847. The radio is supposed to be approximately the same
> size as the Kenwood TS570, which wouldn't make a bad mobile.
>

The real issue is that the 847 seems to be meant as a base radio, primarily .. as is the TS-570 (vs. the TS-50 & IC706MkII which are intended as mobile radios).

So ...my original message (long ago!) was, if it is to be used as a base radio, why no antenna tuner option for use with base station antennas (few of which are in resonance across an entire band)?

Phil

Hi,
I have had a lot of Amateurs replying to
me wanting the Collins Catalog's that I had.
Which are sold.
What I will do is I have had copy made of
these Books to keep for myself and if anyone
wants copys I would take my copys down to the
copy shop and have copys made for you. They put
them into binders and they look good. Almost
as good as original (almost). They charge me
$13.00 a book and if you want any of them let
me know and I will get them coped and send
them to you. $13.00 plus shipping, "each". The
shipping runs $2.00 each or all 5 for $5.00
If you want any make sure to let me know which
ones you want.

These are the copys that I have.

1. Collins Amateur Radio Equipment catalog.
Feb. 1961, 13 pages.

2. Collins Amateur Radio Equipment Catalog.
June 1963, 29 pages.

3. Collins Amateur Radio Equipment Catalog.
Nov. 1964, 23 pages.

4. Collins Amateur Radio Equipment pricing
schedule. Aug. 1966, 13 pages.

5. Collins Mechanical Filters, general
catalog. march 1964, 21 pages

This was the first handheld I purchased, soon after receiving my basic qualification, mostly because it was recommended to me by someone whose advice I respected, more than any technical qualities the radio might have had.

I've been happy with the radio, and use it very regularily for over 2 years now. I have done the transmit mod to it, so I can chat with truckers on one of the frequencies they generally use here in the province (153.100) -- I travel a bit myself for my work, and its always nice to know what the road conditions are like furthur ahead, etc.

Intermod rejection is quite poor, but I don't go to the big cities too much, so it doesn't become a problem. People who talk to me, mention that the radio sounds good, so it must have a fairly reasonable mic. I have an external speaker connected to it, for when I'm driving, so I can at least hear, etc.

The removable front panel is a great feature, and like you, I wonder why more handhelds don't provide that feature. On mine, its mostly removed, and I use the panel as a remote mic, which comes in really handy when I'm driving.

Paired with an outstanding Larsen magmount antenna, this has been a great combination for me, and I don't hesitate to recommend this radio.

kd1my@revnetx.net wrote:

>Does anyone have comments good or bad on the Icom IC-Z1A.
I,ve had mine for about 2 years., with little problem. The
removeable faceplate works as advertised, and I found the receiver
hotter than most. The Z1a had a few annoying design flaws that caused
it's early demise. Perhaps the most annoying is the volume control,
which requires which requires pushing an extra button to activate it.
I may not sound like much, but it's rather annoying . The other common
complaint is the the PTT switch is narrow (due to faceplate design)
and this bothers some.
The only problem I had with mine was a constantly loose antenna
jack, causing the rubber duck to wobble and occasionally cut out.
(Another annoying design flaw). While in Seattle a few months ago I
stopped by ICOM repair and they fixed it, at no charge, on the spot.
Thank you ICOM repair for understanding the meaning of customer
service.
I think for the most part the later ICOM HT's are redesigned Z1A's
with all the minor glitches removed. Bottom line is it works great

If they are grey imports then they may not be CE approved and may not conform to UK standards!
Maybe they are all the ones from the first run that have that cross-mod problem, that's why they are going cheap? or is it the -10db 3rd order IP's on 50MHz?????????
Also, the fax I had does actually state that Icom UK have removed the dealership from them!
so something bad must have happened!
It maybe best to stay away from that offer.

You could buy the AA battery case. It is designed to hold 4 AA batteries. You could drill into it and wire your power supply to it's contacts. So to use the power supply, you slap that battery case on the back (instead of plugging onto the jack on the side). Should hold it upright as well.

Prof Ed Delp, N9YTE, of the Purdue EE department has presented
DSP to our club, Tippecanoe Amateur Radio Association (TARA, W9REG).

Plus his lab (he has walked the club thru it) is researching advanced digital signaling processing procedures. Ed has laid out a vision where we could have reconfigurable receivers in any mode. No need for seperate demoduators (ie packet modems) nor filters. All done inside the DSP chipset with software.

A receiver would be an RF amp chip, mixer/IF chip, DSP, AF chip and a micropressor to run things. It could be built as small as the ICOM R-10. Want CelTel coverage, program it in. The cops go to digital mode, program it! A receiver that could cover DC to daylite (the RF and IF stages are not really needed by do help).

TVs now use only three chips for everything. DSP is a part of HDTV (DTV). DSP is the main part of a CD player (plus a filter and audio chips). They are used in broadcasting audio, telephone switching systems.

Thanks Gary for the idea of using the manufacturer's data book. I did not think of sample programming to be included.

Greg,

Yes...there are a bunch. Very hard to generalize the results, except that longer is generally better!

All other things being equal (like length) some are better in the ham bands, and some have better wide freq performance (like if you scan or modify your radio).

Best long one I have is a Comet SMA3. I suspect there are newer, better ones .. and I understand Diamond has some, too.

The downside of "smaller-is-better" is the user interface. Examples: Most TV's are large due to screen, not electronics; small computers (palmtops) are limited in use due to keyboard, not electronics (My Libretto is a pentium PC and performs fine, but I wouln't write a book with its keyboard).

My 706MkII is small enough for my uses. The front panel could not get much smaller and really be usable; and then there is the power dissipation issue (unless you just want to receive).

Yes, that's where divorcing the controls from the radio makes some
sense. Take the Icom PCR1000 for example. It doesn't matter that it
is small since the "controls" are on the PC. Or consider the Kachina
505, it is big, but again you don't care. You can tuck it in a closet
somewhere while controlling it from your PC (even dial up by modem
from a remote location).

>My 706MkII is small enough for my uses. The front panel could not get
>much smaller and really be usable; and then there is the power
>dissipation issue (unless you just want to receive).

Agreed. The control head is about as small as would be usable. The
body could be larger without any harm since it can be tucked in the
trunk or under a seat, and would allow use of a larger heatsink.

It would be neat if Kachina offered a control head for their radio
the size of the one for the IC-706. That would let it operate without
an associated PC for those who prefer that style of operating.
They have a mobile mounting kit for their radio, but you need to
operate it from a laptop. That doesn't bother me since I need
the laptop anyway for digital operating. But for those who want
to operate SSB or CW, an optional traditional control head would
be a selling point.

But back on the $500 HF radio topic, size shouldn't be the
determining factor. If it is cheaper to package the radio in
a larger box, then do it. I see it as aimed at the entry level
desktop rather than the mobile market anyway. So small
size isn't an essential component of its design. (High
density packaging is more expensive because of thermal
issues and intricate assembly labor costs.) If it were as big
as a TR-4C, that would be Ok. Though with modern
electronics there's no reason I can think of to make it
that large.

I'm picturing something in the IC-735 form factor, but
perhaps made in the tinny TenTec fashion, say like
the Argonaut 509. Sheetmetal box costs are primarily

fabrication cost, so size is irrelevant within a fairly wide range as long as the number of bends needed is the same. Now if it is diecast, or heaven forbid, injection molded plastic, then costs are driven by size. I hope it is in a good metal box for shielding, however.

(Diecasting or injection molding is cheapest, if done in high enough volumes to recover the high initial tooling costs, but few amateur radios are sold in large enough volume to reach that point. So tin box construction is the lowest cost packaging for amateur equipment. MFJ and TenTec have been the prime examples of that. The Japanese seem to be willing to eat the higher tooling costs to deliver a product with a more polished appearance. That's marketing driven and not production cost driven.)

Not sure I agree re his antenna. Could be he is using a horizonal beam
to get into local repeaters (my beam is 1:1 at 50.1 MHz, but
substantantially worse at FM rptr freqs .. where I used it with a tuner
until I put up a vertical). Or maybe he has one of those AEA loops,
which are pretty narrow in Bandwidth.

Yep, that's practical to do now. I can reconfigure my receiver by just
downloading different software into it.

>A receiver would be an RF amp chip, mixer/IF chip, DSP, AF chip and

You've forgotten the LO. You need a wide range LO for an upconverting
design. Today, the best candidate for that is a DDS with a clean up PLL.
That'll likely all be in one chip in a year, but for now you need two or three.
You can do aliasing downconversion instead, but the variable sampling
clock makes the programming more complex. And you need *good*
preselector filtering. The latter is "iron", and that's expensive. It is better
to upconvert and use a fixed roofing filter instead. (My receiver isn't that
polished. It uses a VXO. But that wouldn't do for general purpose amateur
and SWL use.)

>TVs now use only three chips for everything. DSP is a part of HDTV

>
>Thanks Gary for the idea of using the manufacturer's data book. I
>did not think of sample programming to be included.

Not the *data* book. The applications examples are in the applications
book(s), in the case of Analog Devices there are two volumes. That's
one of two reasons I chose the AD parts. The other is that I like the
assembly language. It is more intuitive than that for the TI or Motorola
parts, so the learning curve is not so steep. But good cheap optimizing
C++ compilers are becoming available for the latter, so that advantage
may be mooted.

5998. FS Brand new Icom IC-W32A dual band HT.

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-28 00:00:00 UTC
From: Michel Morin <morinm@csgoeland.qc.ca>
Message-ID: <SgeT.492$PR4.5117185@carnaval.risq.qc.ca>
Source record: 148938

Hi there
I have for sale a brand new Icom IC-W32A dual band ht with a
CP-12L cigarette lighter power adapter, HM-46 microphone, BP-180 battery and
instruction manual. Here are some specs:
true dual band receive V/V, V/U or U/U
crossband repeater mode
receives from 118 to 174 and 400 to 470 normally
receive range can be expanded by a simple keypad sequence
I get cellular images perfectly from 600 to 999.995 mhz
200 alphanumeric 8 character memories
backlighted keypad
full CTCSS transmit and receive and scan to identify while receiving
can be programmed by computer, software included
transmit frequency range expandable by a simple hardware mod
5 watts output with 12 volts D.C. or BP-173 battery
3.5 watts output with included BP-180 battery
power saver mode and auto power off function
tone scan, tone squelch and pocket beep operation
dtmf memory
auto repeater function
A check of HRO puts the price at over $400. with the included accessories.
I will let it go for the best offer over $300. U.S. shipping included by
airmail. I cannot ship c.o.d. from Canada to the U.S., other arrangements
can be made.
Still on warranty for one year, this is new equipment.
If interested, contact me by email.

Hello all,
I bought a Uniden "Force" Uhf 2way and it didn't come with any
info (real cheap price for a real cheap radio).
Can anyone tell me if a normal eprom programmer will work with
the 2716 prom? Is there any special "program" that needs to be
run to actually program the thing?
I noticed a jumper wire on the eprom board what's it for?
I'm interested in taking the radio to 440 can I??
The two freqs in it now are 463.xx and 461.xx.

Thanks
Michael

Source record: 148942

I have experience with 2 hand-helds and a couple of the after-market HT antennas with the SMA connector the commit and Diamond spaghetti antennas are great for general use and work better than the stock antenna. Receive is improved and transmit is also made easier requiring less power to get to different repeaters. with the C510A that is important. there is also a stiff rubber duck made by commit whitch I plan on buying for both HTS and I think that will really mae it easy for me personally. I think you will also notice that the sma connector is a little more forgiving than the BNC connector. when it comes down to it its all a matter of personal choice. for current price lists and so on see the AES web site
http://www.aesham.com

good luck

Vandenberg Launch Rescheduled...Again

Thursday night's launch of a Delta II missile from Vandenberg AFB was cancelled due to upper level winds. The launch is now scheduled for Sunday night (March 29th). The main events of the launch will be as follows:

Time Elapsed
Event (PST) Time

Launch 22:02:46 00:00
Jettison Six Solid Rocket Motors 22:04:14 01:28
Jettison Three Solid Rocket Motors 22:04:57 02:11
First Stage Engine Cutoff 22:07:11 04:25

Something of interest to look for during a Delta II night launch is a brief orange flash in the direction of Vandenberg at first stage ignition while the vehicle is still on the pad. The sky lights up for about 2/10ths of a second and then grows dark again. This was first reported by Ron Rennie who was watching December's dawn launch from high up on the Palos Verdes Peninsula, a distance of about 150 miles from the pad! Other events to look for (and to atttempt to photograph) are the jettison of solid rocket motors from the first stage.

Detailed information on this mission can be found at the Boeing web site at www.boeing.com. Look in the commercial space area for the MS-8 Press Kit.

For the current status of this launch, call the Vandenberg Launch Update Line at 805-734-8232 ext. 61857 and the Delta II 24 Hour Launch Information Hot Line at 714-896-4770.

Wednesday Dusk Launch

A Pegasus XL missile is scheduled to be launched off of California's central coast at about 18:40 PST [1] this Wednesday (April 1st). The Pegasus will be carrying NASA's TRACE satellite.

The missile will be air launched from an L-1011 aircraft flying at 39,000 about 70 miles southwest of Monterey. The coordinates of the drop point are

36.000 degrees north and 123.000 degrees west.

Since the launch will take place about 25 minutes after sunset, the vehicle's exhaust plume should be brightly backlit by the sun when the Pegasus reaches high altitude. The impressive sight should be visible from as far away as Santa Rosa, Ridgecrest, and Los Angeles.

If you're interested in photographing this launch, I would suggest using Fujicolor 800 print film, a 50, 105, or 135mm lens, and a steady tripod. When the exhaust plume appears, take exposure readings of the plume and shoot at the indicated exposure [2].

For the current status of this launch, call the Vandenberg Launch Update Line at 805-734-8232 ext. 61857.

Notes

1. This time is approxiate. Launch can occur a few minutes either way of the planned time (note that launch can take place before the planned time).

2. You can't determine if your exposure was correct by looking at the prints; look at the negatives. Even if you under- or overexpose shot, a good photo lab technician can often compensate for it and produce a good print.

Launch Viewing Locations

I'm planning on traveling to Santa Barbara County to photograph Sunday's and Wednesday's launches. Where I'll be will be determined by the weather and my schedule. The candidate sites are as follows:

Cement Water Cistern This site is a water tank in the mountains north of Santa Barbara on East Camino Cielo. The altitude is about 2,800 feet above sea level. This site is either immersed in clouds or clear.

The directions to this location are: Take highway 154 to East Camino Cielo.

Go east (uphill) on East Camino Cielo past the Forest Service station and market. Continue going uphill for several miles. The water tank is on the left.

Refugio State Beach Experience has shown that when low clouds are present along the coast, the area between Goleta and Gaviota tends to be clear. This is apparently caused by the mountains to the north and Point Conception serving as a barrier to the low clouds which tend to flow off of the ocean from northwest to southeast.

This site is on the west shoulder of highway 101 about 1 mile south of the entrance to Refugio State Beach. To get there, do the following:

Proceed south on the 101 past the Refugio State Beach parking lot. Look for a sign that says "End Freeway". At the first call box, pull over on to the shoulder of the road.

Parking on the shoulder of the highway may be illegal. However, the shoulder of a highway is a hazardous place, so be careful.

Santa Ynez Peak This location is either shrouded in clouds or very clear. When it's clear, this 4,200 foot high site is well above the marine layer and offers a superb view.

To get there, take highway 101 to Refugio Road.

Take Refugio Road east (uphill) for several miles until you reach a T-intersection the top of the mountain ridgeline. You should see a stop sign, a sign for the La Scherpa retreat, and a road with a white sign that says "This road not maintained by Santa Barbara County..."

Take the road with the "This road not maintained..." sign and travel uphill for several miles until you reach the gated road that leads to the observatory. Park in the clearing near the gate.

Be advised that the road leading up to this site can be dangerous. Loose gravel, ice, or not paying attention to your driving could send you over the side to your death.

If you're interested in joining me to view either launch, you'll need to know where I'll be. Listen for me on the 147.000 MHz Santa Barbara repeater during my drive into the Santa Barbara area. If you don't have a VHF receiver, then refer to the table below.

Day Event Sites

Sunday Delta II Night Launch Cement Water Cistern (first choice)
Refugio State Beach (second choice)

Wednesday Pegasus XL Dusk Launch Santa Ynez Peak (first choice)
Refugio State Beach (second choice)

As I drive north on the 101 on Sunday and Wednesday, I'll look up at the mountains and see if my primary site is clear. If it is, I'll go there. If not, I'll probably go to Refugio.

Vandenberg Launch Nets

Local ham radio operators plan to hold Vandenberg Launch Nets for both Sunday night's Delta II and Wednesday evening's Pegasus XL launch. The purpose of these nets is to pass along countdown status and to discuss the launch. The nets will begin at the following times:

Net
Start
Day Event (PST)

Sunday Delta II Night Launch 21:30
Wednesday Pegasus XL Dusk Launch 18:00

The repeaters to be used are:

Freq. Offset Tone
Repeater (MHz) (KHz) (Hz)

Santa Barbara (Primary) 147.000 +600 131.8
Thousand Oaks (Secondary) 147.785 -600 127.3

For those of you who participate in these nets, please be aware that I'm very busy from about T-10 minutes to T+8 minutes and I can't respond to your calls on the radio.

Please forgive me for asking for early computer stuff on an amateur radio board but many of you are the real microcomputer Pioneers and I humbly ask your help in locating something.

I am a collector of early personal computer items and am looking for an Altair 680 to add to my collection. I am willing to pay a very respectable price for one.

Additionally, I have an Altair 8800 that has been upgraded. I would surely like to find the original MITS circuit cards for it. Especially the MITS CPU card. If you have any MITS cards you would consider selling, please email me directly.

Thanks very much for your help and forgive me for intruding.

6008. IC-746 Info

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-28 00:00:00 UTC
From: Pete McGreevy <PMCGREEV@MAIL.IDT.NET>
Message-ID: <351D8094.1E37@MAIL.IDT.NET>
Source record: 148948

I had a chance to actually see/youch/hear the 746 today at the
Timonium, Marymland Hamfest..... Overall impression... very nice radio.
All seems as advertised... EXCEPT:

The "band scope" is NOT real time, hell, its no time at all. You have to
toggle it on, so it works as follows:
1-Normal receive mode... no scope, nothing, scope is inactive/in
frozen mode.
2-put scope on, scope scans across the band area, BUT... NO
RECEIVE AUDIO... nothing, it shunts the receive signal to the scope,
totally, you hear NOTHING! Then you can switch back to receive mode,
which freezes the scope at ita last position.... Soooo... it looks nice
in the brochure... but it is not really a feature.

Otherwise, its a gorgeous radio. Very slick, nice size/heft to it.
Looks better than the 756, imho, but that bans scope setup is a big
disappointment... ruins an otherwise great rig.....

There's my 2 cents --

Pete -- KA2YDY

ps- isn't that the way the bandscope works in the 706? I dont own one, so
I am not sure.

>I'm driving.

An interesting variant on this is the radio/battery separation cable
for the FT-50. This puts the battery on your belt, and the radio clips
wherever you want it just like a speaker mike. Most of the weight is
still on your belt, but you have mike, keypad, and display all up in
your hand. And the antenna is mounted there too, giving better range
than if the antenna was down by your belt right against your body.
Seems like a good alternative to a speaker mike for hanheld use - too
bad the cable is so expensive.

This wouldn't work so well mobile, though, where you'd want an external
antenna.

Hi everybody.
Kenwood TM-V7A vs. Icom IC-2710H
I was looking for a direction to go with a new mobil rig. I've been a ham for about 5 years now but inactive. All I have is an HT.
My delima is I like them both, but I want to make sure I am spending the $500 in the right place. So any info I can get will be greatly appreciated
Thanks in advance!

From: dgf@netcom.com
Message-ID: <dgfEqICE4.L6A@netcom.com>
Source record: 148965

I have some new NiMh batteries for the kenwood PNB5 and PNB13 sized HT batteries.

I've been trying to use the MAHA charger (advertised in recent QST) but it's "universal contact" arrangement is just too much bother (the little spring-loaded pins are much too short to deal with the variations I find among the batteries I've tried, and the charger seems to get hopelessly confused with NiMh batteries so that it aborts the charge process much too soon, leaving me with only maybe 10% charge). After the first unit being DOA, and the second unit being this frustrating, I'm afraid the MAHA won't be a long-term situation here.

Anyway, I'm game to find a drop-in charger of some sort that can handle these (different) types of packs. Looking for recommendations so I don't just buy another disappointment.

I'm selling this mobile rig for $325.00 & I'll pay for shipping, insurance and throw in a duplexer.

I've had the radio 2-1/2 years with no problems. The only blemish is that the metal prong on the back of the microphone broke off. But I never hung the radio up so I never had a problem.

The radio has 21 channels per band (42 total), it puts out 45w on 2m & 35w on 440, it does CROSS BAND REPEAT and has the optional tone squelch unit (UT-40) installed.

I've got the original box, manual and mounting bracket.

I've bought a new radio already, so I want to sell this quick.

Please RSVP to n1uwhNOSPAM@worldnett.att.net (remove NOSPAM) or DSW612@AOL.COM.

PLEASE DON'T POST REPLY'S!!!!

6026. 'C54x DSKPlus Expansion Board

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-28 00:00:00 UTC
From: bilwoodson@aol.com
Message-ID: <1998032804363900.XAA10134@ladder01.news.aol.com>
Source record: 148973

FOR IMMEDIATE RELEASE

Software Development Tool Enhances DSKPlus Capabilities

Rochester, NY - Z-Domain Systems Development has officially announced the release of its DSP Expansion Board Plus (DSP-EBPlus). The board is intended to be used in conjunction with the Texas Instruments 'C54x DSKPlus. The DSP-EBPlus is designed to attach directly to the TI DSKPlus; with it, a software developer can enhance the capabilities of the DSKPlus to allow development and debug of sophisticated DSP code previously outside the scope of the DSKPlus's capabilities. Features include 128K of zero wait-state RAM, a bidirectional ASCII serial interface with software selectable baud rate, an LED and test point output latch, and software in C and assembly that demonstrates the ease of use of the board's features. This product is of special interest to companies and individuals developing communications, voice processing, and signal processing applications, because it allows companies to develop complex DSP software on a low-cost platform.

The DSP-EBPlus's ASCII serial interface is compatible with any RS-232 serial port. Its baud rate is software selectable from 2400 up to 115K baud. Software drivers are included to program and control the on-board UART. Embedded versions of familiar standard I/O routines such as printf, scanf, putchar, and getche are also included.

The 8-signal test point and LED output latch allow the output of important state information from the user's application that is running on the DSKPlus. The outputs to the LED latch are available via test points, to allow resolution of critical signal timing. Example code is provided that demonstrates these features as well.

The DSP Expansion Board Plus is available now starting at $99.00. Also available is the DSP Debug Board, which provides similar capabilities for the 'C5x DSK. Information requests and orders can be directed to Z-Domain's information and order line (1-800-743-1374), or via e-mail to info@z-domain.com, or by visiting the Z-Domain Systems Development, Inc. website at www.z-domain.com

Company Background

Z-Domain Systems Development was founded in May, 1996 to design, develop, and manufacture DSP-based wireless data communication, voice transmission,

and remote monitoring equipment. The 'C54x DSK Expansion Board
Plus is the second product in the DSP Debug Board line. Z-Domain Systems
Development is headquartered in Fairport, NY. For further information,

I have been thinking about building a DSP radio. It could be built with five chips. The hard part would be the programming. I still am not as good as like at DSP programming. But that is the way the world is going. It software that is the future. Even in the EE programs, hardware is almost a thing of the past (except for chip design).

Just make sure that the scanner can receive the aviation bands because not all can. I have a scanner that has the aviation bands "missing" from the range of frequencies it can receive.

Personally, I use my Kenwood TM-742 as a scanner when I'm airplane watching. Also comes in handy on my way in for a couple of hours flying because I can check out the ATIS.

Cheers!

I have TH-79(E) and the TM-V7. The TH-79 comes with 5W power when
using a high-voltage battery. It's listed in the parts list and the
manual.

>
>Also, I think I like the idea of dual receive (TH-79), but I like the
>idea of more memories on the TH-G71 too. In reality, the 82 memories
>(or whatever) on the TH-79 are probably more than enough though. Any
>thoughts on this? How many memories do most people use (I'm still used

Well, of course, I am already operating a DSP receiver of my own design.
I've talked about it here at length several times. It is basically the same
concept as the one in the current April QST except that I use the Analog
Devices chipset rather than the Motorola chipset. Total cost was under
$120. And performance rivals any of the commercial rigs in everything
except dynamic range. That's due to codec limitations. The Motorola
chipset looks better in that regard, but wasn't available when I started
my project. My receiver does sport a robust QPSK demodulator which
isn't available in any of the commercial amateur radios at any price.

(And the companion transmitter is directly driven off the sound card
of the PC which generates the QPSK vectors in software. That's for
convenience, since the Viterbi coding is done on the PC anyway and
there was no need to invoke the power of the DSP chipset to do that.)

What have you built that exceeds the performance of available commercial
amateur equipment? I'll wager that it is nothing, just rehashes of the simpler
designs of the 30s. You really should try to move into the latter half of the
20th century, Jeff. There's little enough of it left. We have learned how to
do better than hand keyed MOPA designs in the last 60 years. Why haven't
you? As a mathematics instructor, I'd expect that the generator equations
should be child's play for you. Why haven't you implemented them? The
chipsets are available, and they are cheap. Old discrete component TV
sets are becoming rare. What'll you do when you're *forced* to use ICs?

I have the following Radio, and electronic equipment for sale. Reasonable offers or trades for radio and Pentium computer EQ. will be considered. All working last time tested unless noted. Shipping is extra.
Thanks

• Tempo-1- Tube type Ham Transceiver/with Power Supply 80-10 meters. Looks good and works well. 100W output. $200

. Siltronix 1011D excellent condition both in looks and operation. Scale of 1/10. I would rate 9.5. $225

. Swan 350 Transceiver with Power supply 80-10 meters. Looks good works well. $250.

. Swan 270B Transceiver has internal Power supply 80-10 meters. Looks good works well. $250

• Motorola VHF Remote All tube Model: PA8270J SER.NO: 8697. There is also a tone Signal and intercom control on front below speaker. This is the type that was used by police and fire dispatchers in the past. Don't know if it works. $50

• Heathkit HW 101, 80-10 meter transceiver. No Power supply. It is receiving, but don't not transmit. Not able to test. Looks are 7/10. As is $80.

• Hallicrafters Model S-108 SW Receiver with a calb. Ham band spread. Looks good works well.$75

• MFJ Rtty/CW Computer Interface Model MFJ-1224, used for copying code from the radio to your computer. $50

• Pearce Simpson, Guardian 23- All tube CB Transceiver/with mobil power cord and mounting bracket. Looks and works Good. $100

• Traynor, Group Two B- Audio Amp Head. High/ Low mic. in puts. Master volume, volume, bass, treble and tone shaper controls. $125

• Channel Master- Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM. AM not working. $125

. AR Inc.- Stereo Amp, all solid state. $100

>programs, hardware is almost a thing of the past (except for chip
>design).

The chipset manufacturers offer applications books for their chipsets with example programming. My first cut at my DSP receiver simply used code lifted whole cloth from the Analog Devices application handbook. As you study the code examples, you can learn how to efficiently code your own algorithms, but you don't need to be able to do that to get started. There's also a good collection of sample code on the TAPR website, and comp.dsp is a goldmine of DSP programming tips and techniques. Don't be afraid to jump right in, you can have working code in very short order.

I'd suggest starting with one of the evaluation modules. It makes it easy to download and debug your code without worrying about hardware bugs. After you have code you like, you can commit it to eprom in your own hardware design if you want to minimize board real estate and cost, or the evaluation module can simply be built into your finished project.

|
| It is theoretically possible to receive a signal, mix it with a local
| oscillator and downshift in frequency. But it is not something you can
| assemble in your kitchen for a couple of bucks.
+---------------

Indeed! And one of the nastiest of the problems is that the local oscillator and/or mixer section (if not constructed *very* carefully) may radiate the local oscillator frequency outside said kitchen into somebody *else's* receiver, thus interfering with *their* reception (something neither the FCC nor the FAA would take kindly to).

-Rob

p.s. Cheap pocket F.M. radios have local oscillators that, when the radio is tuned near the top of the F.M. band, can radiate smack dab in the middle of the aviation band, and in fact, perhaps right on the frequency of the ILS your plane is following! So when the flight attendant says, "We're starting our initial approach... all electronic equipment must be turned off"... please, do turn it all off.

>this: Are these things worth the money? I mean, is 200-300mW going to be
>practical for everyday use? Am I going to be able to hit the LOCAL
>repeaters with these, from 2-4 miles away?

Only you can really answer this question. If you already have a HT, can
you comfortably access your local repeaters on low power in all the
areas where you are likely to operate?

Even being on the wrong side of the building in relation to the repeater
can have an adverse effect.

I have a VX1 and FT51. The local 2m and 70cms repeaters in West London
are on the same site 2.75 miles south of my house. I can get into the
repeaters using both radios on low power but access is not so good from
a north facing room.

Howdy,

Just wondered if anyone else has problems with receive audio distortion on the DX-70 small size HF portable xcvr. I get it most on 80 meters ssb, when I turn the audio gain past about 10 o'clock. Alinco said it is coming from the output amplifier circuit, but I pick it up a couple of stages ahead of that from the low level amplifier that sends audio to the microphone terminal. Just as distorted, so it must be coming from ahead of that.

The rig is a complete b&*%$#@ to work on since the main board is double sided. So, I just wondered if anyone has the same problem, and if anyone has heard of a fix.

rick@geotool.com

Cheers,
Rick Curtis

>A fellow ham friend of mine has a JRC Model JST-245 Transceiver. He would like to extend the transmitter output frequencies to be able to drive transverters.
>Since he doesn't have online capabilities I thought I would see what I could find for him. Checking the "ftp mod" sites resulted nothing.

>Does anybody have this info or know where to get it? Please e-mail or post.

>Mny Tnx es 73's
>Ken
>KK4BH

Someone posted this info a while back and it seems to work:

To enable the tx for total frequency coverage push the 50MHz button during power on and wait until you hear 3 beeps, then 3 beeps again. This will take several seconds. Then turn off the rig and power back on normally. Repeat these steps to reverse the process.

I leave my rig in the "standard" mode since I don't want to have any "accidents."

Message-ID: <HmtT.4$7S5.91895@carnaval.risq.qc.ca>
Source record: 148810

Hi there
I have for sale a brand new Icom IC-W32A dual band ht with a
CP-12L cigarette lighter power adapter, HM-46 microphone, BP-180 battery and
instruction manual. Here are some specs:
true dual band receive V/V, V/U or U/U
crossband repeater mode
receives from 118 to 174 and 400 to 470 normally
receive range can be expanded by a simple keypad sequence
I get cellular images perfectly from 600 to 999.995 mhz
200 alphanumeric 8 character memories
backlighted keypad
full CTCSS transmit and receive and scan to identify while receiving
can be programmed by computer, software included
transmit frequency range expandable by a simple hardware mod
5 watts output with 12 volts D.C. or BP-173 battery
3.5 watts output with included BP-180 battery
power saver mode and auto power off function
tone scan, tone squelch and pocket beep operation
dtmf memory
auto repeater function

A check of HRO puts the price at over $400. with the included accessories.
I will let it go for the best offer over $300. U.S. shipping included by
airmail. I cannot ship c.o.d. from Canada to the U.S., other arrangements
can be made.

Still on warranty for one year, this is new equipment.
If interested, contact me by email.

Message-ID: <351E6FB9.8796176F@mindlink.bc.ca>
Source record: 148814

On the back cover of CQ VHF magazine I just rec'd in mail, advert for the VC-H1, which appears to be a image scan converter, which in the picture, is connected to a Kenwood TH-G71A handheld. This caught my eye (like all good advertising should ;-) and I was wondering if anyone has had to opportunity to play with this combination, and would care to share their thoughts about it.

Also, any recommendations from the Kenwood handheld featured in the ad?

6084. FS/L.L. Grace DSP-12 "Sat" TNC! Work the Sats!

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-29 00:00:00 UTC
From: Dale Yost <dyost@marketing-support.com>
Message-ID: <351E716E.6272@marketing-support.com>
Source record: 148817

Hi,

FOR SALE: For ham radio enthusiasts, this is the "ultimate" TNC. Hook this up to your rig (even a handie-talkie!) and your IBM-compatible computer and you can easily connect to your favorite local land-based packet radio stations. But this TNC can also let you do a whole lot more--including experiencing the thrill of communicating with any of the many amateur radio satellites, certain (ham operator on-board) Space Shuttle Missions, even Russia's MIR
space station!

The DSP-12 replaces the traditional analog modems of cheap TNCs with a Digital Signal Processor (DSP) CPU! It's fully programmable.
Handles the specialized packet protocols of WEFAX, RTTY, ACARS, plus the OSCAR (Orbiting Satellites Carrying Amateur Radio) satellites. Works
with
HF Packet, RTTY, and ASCII; VHF/UHF packet; plus the capabilities you need to work the satellites: 400-bps PSK, 1200-bps PSK, 9600-bps direct FSK--plus six PSK speeds from 75-1200-bps. And since it has a computer CPU, it can be programmed with software upgrades to handle new technologies/protocols as they're introduced.

This immaculate unit cost me over $700 new. Comes with a very thorough manual--plus Satellite Tracking software (Looks better than NASA's on-screen), plus cable to connect to your computer's serial port, and TNC software. For best offer over $350, I'll include a power supply unit and books on satellite communications to get you going.

For Sale: Complete Drake B-Line

T-4XB, R-4B, AC-4 Power Supply, and MS-4 speaker.

In excellent condition. Both rx and tx cover 80/40/20/15/10 meters.
RX also has crystals for 160, 30, 18, 12, and 10CW, for transceive operation.

Tubes are not new but tx puts out full power on 80 to 15,
slightly less on 10. Will throw in a spare set of finals.
Recently (1996) replaced the high voltage capacitors in the AC-4 supply.

I am the second owner (since 1978) and the rig has only been lightly used.
No contesting. Cosmetically it is very clean (non-smoker) and includes
original manuals.

Best offer over $395.

Source record: 148819

I have one of these terminal units stored away in my shed- will dig it out if I get an answer. The RTTY performance of my MFJ-1278 is dismal at best. Perhaps it's not even feasible, but I'd like to dig out my old HAL and hook it back up to see if it's really the MFJ-1278 or if it's me that is now having trouble decodeing RTTY these days. I remember it being much easier to locate and watch press feeds that it was 15-20 years ago. Or are they all pretty much encrypted now? Thanks for any replies that may put me on the right track- 73, -Web

6088. Antique Radios & Test Equipment 4 Sale Real CHEAP!

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-29 00:00:00 UTC
From: Dean <deanntx@e-tex.com>
Message-ID: <351E9318.DDAF8FC1@e-tex.com>
Source record: 148821
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

Hello everyone!

I have just got through adding a lot more antique radios to the site. All of them have pictures now, so there is no mestique as to what they look like. I have also added a few Test Equipment items as well. Remember, these radios are offered as is with no warranty or guarantee if they work or not. Some are missing knobs, cases, power cords, microphones or whatever. I have priced these radios and such very VERY CHEAP!
These radios are for the collectors out there that want to rebuild, restore or just to tinker with some of the older equipment, and as you will see, they are priced to sell.
We have already sold quite a lot of these old radios to a lot of you out there, so make sure you check the list out again, for it has some interesting stuff on it as well.
I want to also add that there is a new REGISTERED room on the IRC that you can chat with other people with the same interests as you, RADIOS! I know a lot of the hams out there do not like to associate with CB'ers and vice versa, but hey, we all started with that junky old CB that is long gone now.
The name of the room is #CB_Radio, and it is located on the Undernet group of servers.
It is up 7 days a week, 24 hours a day, 365 days a year now. If you are just lurking, or want to buy, sell, trade, swap, wish for or whatever your need be, this Chat Room will be a good place to start. Don't let the name of the room fool you, for it is for everyone that has an interest in some kind of radio communication.
Again, the name of the room is "#CB_Radio", and is located on the Undernet group of servers. If you need software to access the IRC, you can get the latest copy of "mIRC" on our website.
If you would like to take a look at some of the Antique Radios that we have, click or go to the URL below.

http://www.e-tex.com/cbcity

Thanks for taking the time to read this entire message. I hope that I did not offend many of you. I am not out to try and make a killing with all this, in fact I am probably taking a loss, for I am sure these radios cost us a lot more than what we are selling them for.

I'm looking for a couple of power supplies. I need one in the 50 amp(continus output) range and two in the 20 to 30 amp range. They need to be in good working condition with the necessary filtering to be used with ham radios. Let me know the brand, model, continous output levels, condition, and price

frank farwell KB0ZFN

FT-920 HF All-Mode Transceiver. The
FT-920 is a competition grade HF / 6-Meter transceiver for cutting edge technology that separates Yaesu, the world leader in amateur radio from the rest of the pack.

The FT-920 includes High Performance 33 MIPS* Digital Signal Processing (DSP), for razor-sharp selectivity, increased average power output, and voice pattern contour choices; automatic seeking DSP Notch filter and Noise Reduction.

Additional features include a high-speed antenna tuner for RX and TX; user-friendly DSP Bandwidth controls for enhanced interference reduction and exclusive Shuttle Jog tuning controls for fine or rapid tuning.
The new FT-920

Features

HF + 50 MHz with 100 Watts Output on all Bands
High Performance 33 MIPS* Digital Signal Processing (DSP) in all Modes with one touch control
New Design MOSFET PA Finals
Built-in High Speed Auto Antenna Tuner including 50 MHz (Antenna Tuner works on both RX & TX)
Auto Notch/Noise Reduction Control
Omni-Glow Dual Display with Twin VFO Knobs
Simplified Tuning with Shuttle Jog Control
Digital Voice Memory System
Separate FET RF Amplifier for High & Low Bands
Quick Memory Bank (QMB) Instant Frequency Memory System
High Resolution DDS Tuning
Built-in Electronic Keyer (Message Memory Keyer)
Built-in RS-232C Level Converter
And more !
* Million Instructions Per Second

Message-ID: <351EB2DD.C028A5A7@radix.net>
Source record: 148837

Greetings:
I have a complete 2 meter repeater system for sale. The system consists of Midland LMR commercial Exciter (5 W adjustable), RX, and matching 150 W (continuous)Power Amp. System also includes a CAT 300DX Controller, Digital Voice Recorder, Computer Interface, TS-32P tone board. The duplexer consists of 6 Phelps Dodge band/pass band/reject cavities. Complete technical manuals for the radio system, controller, and duplexer. The system is in use on 145.130 in Lusby, MD. It works great, I'm just getting out of the repeater facet of Ham Radio. The price is $1,500.00 firm. I wish to sell the system as a package and do not wish to piece it out. Drop me a line at my email address and I will send you detailed info complete with pics. No trades please. Shipping cost in excess of sale price.

73,
Kevin Kelly/N6QAB

Source record: 148840

The item that we have up for auction is a CPI 2000 base with BC2000 base console and CPI desk microphone. These items were made in the U.S.A. sometime around 1978. Many agree that this is the best sounding unit ever made. The base has an 80 channel kit installed. Standard white cabinet. Completely checked for bugs in February of '98. Works great on AM and SSB! Great skip radio! The base console has a frequency counter, six digit 12/24 hr. clock, antenna switch and receiver pre-amp. Included with this radio console is the original CPI desk mike. Very nice condition! If you have any questions, please do not hesitate to email me.please check out on ebay.

6109. Fix to broken Icom IC725

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-29 00:00:00 UTC
From: "Sven, Maria, Anton och/eller Johan Wijk" <wijk@ebox.tninet.se>
Message-ID: <351EC196.76BAA2E4@ebox.tninet.se>
Source record: 148842

My Icom IC725 broke last weekend. The receiver got totaly silent. I think the transmitter is OK, but I haven't verified it. I talked with the service firm, but thier pricing got me in to trying to fix it myself

After many measurements and tests I finaly found out that I could get the reciever going by short circuiting the the collector and emitor of the Q5 transistor. This disables the transmitter though. I will have to find a replacement for the broken Q5 in order to get everything OK.

I hope this can make the testing faster for anyone with similar problems.

Use at your own risk :-)

Sven, SM5PXK

6110. Did I learn my math right ?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-29 00:00:00 UTC
From: VE2JPT@RAC.CA
Message-ID: <19980329165248166036@trois72.netrover.com>
Source record: 148843

I currently use a 9.6 volts/600mA battery on my FT-50. With this battery, I can get 5, 2.5, 1 and 0,1 watts. With a 7.2 volts battery, I can get 2.5, 1 and 0.1 watts.

If I learned math right, my 9.6 volts/600mA battery will produce 5.76 watts of power. If I get a 7.2 volts/800 mA battery it should provide me with the same amount of energy. Am I still on the right track here ?

If so, buying a 9.6 volts/1200 mA batteru should give me just about the same "range" as a 7,2 volts/ 1600 mA battery.

Do I need to go back to junior high ?

I'm asking this as I want to get a second battery. Large 9.6 volts batteries are hard to come by while large 7.2 volts one are fairly easy to get. Since only the 9.6 will give me 5 watts out of the HT, I would really prefer to get a 9.6 volts battery. And if I get the same milage than a larger 7.2 volts battery I figure it'll even easier to justify the cost to my finance minister ;-))

Stay safe !

I posted a request several weeks ago regarding the TEN-TEC 1260 6 meter kit. I had difficulty with it and wanted comments. I got a number of responses. The bottom line was that it is a good radio and most likely I had constructed it improperly. So, I'll need to pay more attention to detail in the future and it is a good product. Thanks to all who gave me their comments.

Jean-Pierre,

The battery ratings are in volts and capacity in mAh (milliampere-hours). The power is determined by the current drain in mA, not the capacity in mAh. Typically a lower battery voltage will also result in lower current drain, too.

So a 1200 mAh, 9.6 volt battery will basically provide the same power as a 600 mAh, 9.6 volt battery -- but roughly for twice as long (Twice the energy capacity, but not twice the power)

The fat FT-50 battery is MORE than a handful; so I have two of the smaller 9.6 volt batteries.

According to my manual the available batteries are as follows:

FNB-40: 6.0 V, 650 mAh (2.5 W max)
FNB-41: 9.6 V, 600 mAh (5.0 W max)
FNB-42: 9.6 V, 1100 mAh (5.0 W max) <--- Fat Boy
FNB-49: 6.0 V, 600 mAh (2.5 W max)

I've never seen any 7.2 volt battery for the FT-50; so maybe the one you mentioned is 3rd party.

Phil

An easy answer is to put a dropping resistor in series next time you
replace the bulb. 100 ohm or so.
This helps the life by limiting the inrush.

Hi,
Anyone out there using the Force 12 HF antennas? I am interested due to
the pending purchase of a new antenna system and wondered how well their
stuff worked and was put together.
thanks
73 de Ted ZL1MT

Looking for a good rust proof spring/base for a mobile rig antenna.
Equivilent to OUTbacker OB-SB:
Heavy duty,
Nickel or stainless steel,
3/8 x 24 threads for OUTback OB-8 antenna,
SO-239 connector.
Base for horizontal or vertical mounting

Will be mounted on the rear bumper of a pickup, so base could be mounted flat
on top of the bumper or could be bolted to the bumper vertical.

Don't take it to a hamfest - drop me an e-mail!

Hi Steve,

Thanks for the reply. I was thinking of those situations, such as natural disasters or emergencies where you have to make do with what you have on hand. I have a number of friends who are not licensed hams who have purchased the FRS radios, hence my question. Of course, I would never transmit where I'm not licensed.

Regards,

Warren

Source record: 148661

VHF doesn't do it for me. After "upgrading" from my Heathkit HT-16,
I find ham radio boring.
Looking to get back into HF again, but want to explore voice also. So,
I've got this
Dual band (Xcvr in 2m, Rcvr on 440), that I'd like to trade/upgrade to
an HF rig of some sort.
If interested, please email me at eulmer@isd.net. Thanks. Please
include a description of the
rig also, as I'm not "Up" on all the model numbers. Oh, and when the
last time it was tuned too.

I have a Diamond SRH519 I bought for my C510. IT IS GREAT!
Much better recieve in-band (144&440) and is designed for wide band
recieve also. I use it alot to recieve 800 smr and 900 paging. It
outperforms the original hands down. At about $35.00 is pricey, but
with the little radios, you need all you can get.

-------------I was at the same point recently. I discussed this with someone at one of the major chain stores. I wound up buying the ICOM 207. It has various features not advertised. Unless you are going to do something exceptional, there is no need for the extra expense of the radios you mentioned.

I have been very happy with the 207 and know someone who has had one since Nov./Dec. and also loves it.

How does the SRH519 compare to the Comet SMA-3?
I picked up the SMA-3 receiently, and I've had good luck with it, even
though I added 2 pieces of heat-shrink tubing to it:
1-at the point where the base-load meets the whip-the antenna tends to
bend at that point, but the tubing stiffens it just enough to avoid it.
2-at the sma connector-to make a "skirt" at the bottom....the radio that I
use the SMA-3 with(a Yaesu FT-50), has a O-ring to seal the connector from
water & dust-and without the skirt, the seal won't work.
The stock FT-50 antenna, of course has the skirt.

6161. FS 6 METER MICOR REPEATER

6164. FS/T: Icom IC-25H 2-meter rig.

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-30 00:00:00 UTC
From: Chris Buckley <cwbuckle@mtu.edu>
Message-ID: <351FDC68.18F225E5@mtu.edu>
Source record: 148720
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

I have one Icom IC-25H 2 meter mobile radio. It has the original box
and manual, and the following accessories:

Mounting Bracket (quick release type)
Rechargeable Battery Backup Unit (Patches into 12VDC power cable)
DTMF Microphone
AC Adapter for Battery Backup unit.
CTCSS/PL Tone Encoder board attached.

This is a good looking, solid rig. It has memory channels, dual VFO's,
and is extremely easy to operate. I'd like to upgrade to a dual bander
pretty soon here, and this will make a good fund-raiser. I will
consider trades also, however. I'd like $150 for the rig, manual, box,
and all accessories.

Source record: 148729

Questions to the group:

I am just learning about the Motorola System Sabre radios. Are these worth considering for amateur radio use or am I wasting my money ? Would a "lesser" quality radio such as an Icom perform just as well, cost less and have more features ?
If I get a Motorola will I be able to program, reprogram it myself or have to take it somewhere to have this done ? Can the units do 440 Amateur band and receive 800 Public service trunked stuff all in one radio or is this asking too much ?

Thanks any info appreciated

Ed

Hi Brian,

Several of us were star partying at Fremont Pead and saw the launch.

I was watching the rocket through my binoculars and was noticed as
the first stage rockets fell away every few seconds they would burn
briefly almost at the same time. This while the second stage was
well away.

Why this periodic burning of the first stage rockets well after
they had separated from the second stage?

Thanks,
Rich

Hi,

I recently purchased a Watson Multimode Modem (as seen in Radcom/Practical Wireless) to get started on packet. However, the wiring instructions given with the modem are not very good. I want to use it with my handheld, which is a Yaesu FT530. I have managed to obtain a four strand cable (similar to a telephone cable) and some 9 pin plugs as well as some3.5" jacks, but I am at a loss as to what to do next. Even basic wiring codes would be a good start.

Any help of any sort would be appreciated.

Regards,

Dan EI4DCB

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150

148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Minimum Volume Setting

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	
SM-303	X	X	
SM-304	X	X	

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) / 10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant

max series resistance 40 ohm
max drive 2 mW

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

If this is not a joke then I sure hope you did not pay more than $15 bucks for the whole lot, especially when you can buy a good condition GE MPD 48 channel or Moto. similar Synthesized HT that covers the ham bands for about $75 to $150 already programmed to your favorite ham frequencies.

Oh yeah Pekkar Electronics usually sells these dinosaurs for about $20, still way over priced.

Not true.

In fact, getting one before you have your ticket and listening may help you
learn.

Just don't transmit till you get the ticket.

I did some experimenting with it. Doesn't want to let you use it
illegally...:-)
Suggest spreading the coil visible thru the hole in the vco can. VCO voltage
test point
is just to the left of the can. Be careful you don't bust something while
you're twisting on the
glue. I HAVE NOT TRIED THIS. YOU'RE ON YOUR OWN.

HRO has a price of $1569.95 for the 570D/G, and $1895.95 for the 570S/G with no rebates. The April issue of QST on page 121 has an add on the G model that lists the new features. The old D & S models can be upgraded to the G.

Message-ID: <65ET.27$7S5.431231@carnaval.risq.qc.ca>
Source record: 148780

Hi there
I have for sale a brand new Icom IC-W32A dual band ht with a
CP-12L cigarette lighter power adapter, HM-46 microphone, BP-180 battery and
instruction manual. Here are some specs:
true dual band receive V/V, V/U or U/U
crossband repeater mode
receives from 118 to 174 and 400 to 470 normally
receive range can be expanded by a simple keypad sequence
I get cellular images perfectly from 600 to 999.995 mhz
200 alphanumeric 8 character memories
backlighted keypad
full CTCSS transmit and receive
can be programmed by computer, software included
transmit frequency range expandable by a simple hardware mod
5 watts output with 12 volts D.C. or BP-173 battery
3.5 watts output with included BP-180 battery
power saver mode and auto power off function
tone scan, tone squelch and pocket beep operation
dtmf memory
auto repeater function

A check of HRO puts the price at over $400. with the included accessories.
I will let it go for the best offer over $300. U.S. shipping included by
airmail. I cannot ship c.o.d. from Canada to the U.S., other arrangements
can be made. Will include unfilled warranty card and original bill of sale.
Comes with original box and packaging material.

Still on warranty for one year, this is new equipment.
If interested, contact me by email.

For Sale:

Drake R-4C receiver with original manual and additional papers.
Condition is very good plus. Electrically and mechanically perfect.
The Rx comes all three additional CW filters and has extra xtals for
short wave and other bands.

This receiver features the full suite of Sherwood upgrades, including
PS-4 power supply, amp-4 audio bd, Mix-4 FET third IF FET mixer/amp
bd, CW and SSB filter sets, 6-position custom dual concentric selector
switch, etc.

The set is tuned, and together with the the Sherwood upgrades, is
simply a phenomenal performer. $550 + S&H conus.

Well I think you need to look at the Icom T8. Has all the features of the G71A with 6 meters and FM broadcast band (76-108). Will also cover 800Mhz with cell block and a couple of other frequency rangers as well. And the audio is just as good if not better than the G71A. Same mil spec rating and smaller. Comes with a nickel metal hydride rather than a ni-cad pack and is $30.00 bucks cheaper!!!

Just acquired a Digital Sport Systems HF Amp model 2020SB from my uncle. All I got with it was a sales brochure, and I need some more info. I do know that it is 1.5-40 MHz, 4 watts in, 200 out on AM and FM and 7 to 25 in, 410 out on SSB. Solid state, 13.8 Vdc operation. Any help greatly appreciated.

Thanks,

Steve, KE4MOB

Hi!

As the proud owner of the very tiny VX-1R I'd like to know if there are any keypad mods for this HT. I've already ordered the software package ADMS-1D, but I'm still waiting for it, and I'd really like to have the crossband-scan enabled.

I'm also looking for other keypad mods...

Anyone?

Tnx in advance,

Rob B.

6227. FS: Yaesu FT-709R 70cm HT

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-30 00:00:00 UTC
From: cwbuckle@mtu.edu
Message-ID: <6fo7nr$7c5@login.ee>
Source record: 148798

Subject: FS: Yaesu FT-709R 70cm HT
Newsgroups: rec.radio.swap
Summary:
Keywords:

This Handheld has all the features with a very low price. I'm just thinking of upgrading to a dual bander. If you would like to trade for this radio, that is definately an option. I am in the market for 2m/70cm single or dual band equipment. If you happen to have an AT-600, then even better!

The radio comes with the antenna, the 12V (High Power) battery, a car adapter for battery charging, soft case, and a speaker mic. It is a very rugged radio, looks like it could be run over with a car (this feature, fortunately, has never been tested) and keep going.

Features:

Handles 6-15VDC
Has low power (400mW) or high power (4W) selection
2 sensitivity settings for VOX operation
Power Saver Mode
Priority Monitor / Call Freq / makes for 11 memories.
Lamp for night use
Modifyable freq step
Full DTMF and CTCSS/PL capability.
Heavy Duty Belt Clip

I have no trouble whatsoever bouncing this thing off of repeaters in low power from a couple of miles away. 70cm isn't as active as I'd like it to be around here, so I haven't been able to get much use out of this.

I'll take reasonable offers on this one.

I disagree, I've owned them both and found the G71A's audio to be
superior. I found the G71A audio to seem lounder and at maximum volume
setting the audio quality suffered on the FT50. I also found the FT50
unusable in a high RF environment, the G71A was usable. I've owned both
and recommend the G71A over the FT50R.

6235. Email reflector for collectors of OLD tube type ham gear.

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-31 00:00:00 UTC
From: Eugene Rippen <soundval@foothill.net>
Message-ID: <3521A027.78BF@foothill.net>
Source record: 148558

For those interested in older ham gear, tube type items and accessories,
including homebrewers, there is an Email Reflector called baswaplist.
It is FREE. It has over 600 subscribers

IT IS FOR buying, selling and swapping of :
Tube Type and Older ham equipment, parts, accessories, and
manuals and catalogs.
Books and periodicals concerning tube type equipment and older
ham gear.
Single one time announcements of swap meets. Though, NOT
including who will attend or what specific items will be
offered.

IT IS NOT FOR:
Discussions.
Commercial advertising other than for the sale of specific
items of the nature described above, and with prices
and quantities. In other words, no institutional type
advertising.

LIMITED (but not totally banned) ARE:
Repetitive ads.
Auctions. An auction is considered to be any ad of items for sale
that expressly or impliedly requests offers.
A reasonable amount of ads relating to Tube Type Domestic
Broadcast Receivers and Parts are permitted.

Persons, whose mail repeatedly bounce, are removed from
the list. They can, of course, subscribe again.

TO SUBSCRIBE: SEND Message to: majordomo@foothill.net
In MESSAGE body SAY ONLY: subscribe baswaplist.
Then the email address of the sender will be added to the list.
To unsubscribe do the same, only say "unsubscribe" instead of "subscribe"

This list is CASE SENSITIVE as to the addresses of subscribers, that
is regardless of whether your ISP at your end is case sensitive. Mail
that comes from a sender whose address does not PERFECTLY match
the address on the list of subscribers is bounced. This is installed as
some prevention to the list being used for spamming.

Messages sent directly to me requesting subscribe or unsubscribe may
be ignored, or at best sent some kind of prepared boiler-plate
notice.

I run the list. I am Eugene Rippen. Flack may be directed to me
at soundval@foothill.net

THINGS THAT I DON'T LIKE ABOUT THE YEASU FT-847

1. VERY NOISY FANS, ALWAYS ON, (SOUNDS LIKE A PERSONAL COMPUTER)
2. CAN'T MEMORY SCAN BY MODE
3. ONLY 78 GENERAL MEMORIES FOR WHOLE RADIO NOT LIKE ADVERTISED (78
PER BAND)
4. NOT ABLE TO PROGRAM DIFFERENT CTCSS TONE ON XMIT AND RECEIVE
5. THE 12 SATELLITE MEMORIES NOT USABLE FOR SAME BAND REPT.
6. ONLY ONE WAY CROSSBAND REPEAT CAPABLE, IN SAT MODE ONLY
7. CTCSS DECODE CKT. OPENS ON SIGNALS WITHOUT PROPER TONE
8. REPEATER OFFSETS ADJUSTABLE, BUT IF USING DIFFERENT ONES IN THE
SAME BAND THE MEMORIES DO NOT STORE THEM SEPARATELY
MORE TO FOLLOW

> >
> > If you could suggest a good brand, all the better!

This is a bit "off-topic" but I thought it should be clarified before it confuses someone.

Ok, the factory tint in "newer cars" WILL NOT interfere with electronic transmissions through the glass. This type of coloring is chemically dyed into/onto the glass. Don't worry about it.

What the rep was trying to refer to was aftermarket tint that is applied. The higher end grades contain aluminum or carbon bases to obtain their coloring and to not fade (turn purple) in the future. The films containing aluminum have been known to cause some minor static in radios/cb's/phones. What you would need to do is to cut away the tint where the glass mount antennae will attach so there is nothing but glass between the two units. Cut the film just a tad smaller than the bases so you can't tell it was ever trimmed.

The only thing you wont be able to remedy is if you have a alarm with a radar sensing system (like VIPER "Attention! Stand back! This vehicle is armed... etc. remember that one??). This type of alarm sends out a continous signal and if you have a metallized film, the windows will reflect the signal back to the unit before they even get outside the car.

Hope this clarified a few things.

Stan, I used to work for Kenwood, and now work on their equipment as time permits. It probable that the DC/DC converter is faulty, as they said. Unless you have the service manual and can work on small surface mount parts, I wouldn't dig into it. I have a new service manual for sale for $40 post-paid. Kenwood gets $48 plus shipping and handling. The part number for the board is X59-1100-00 and it retails for $10.3l Parts are available from Pacific Coast Parts, online at https://www.pacparts.com/whlsl.html. If I can be of some help please ask. Stuart K6YAZ stuartl73@aol.com

James, I have had a 706 for a couple of years, love the radio, but having about 45 memories in use, that is how I have to do it. Don't like it, but it's how it's done. Stuart K6YAZ stuartl73@aol.com

Hello... My name is Daniel

I am interested in finding out the feasibility of networking 2 computers via packet radio (TCP-IP)

I was wondering if there were hardware/kits available that would allow me to connect the BNC cable on an Network card and possibly use a frequency in the 800 meg - 2 gig range. Is this possible... and if so, how would I go about doing this?

Thank You!!!

Daniel

Hi.

I have a Kenwood TH-77A. I would like to find a PG-3E or the original filtered cigarette plug.

Also, I am looking for a 2m/440 whip that is compatable with a Larsen MM-MLA antennae.

Please e-mail adhawk@hotmail.com

Thanks!

That model has a sweep feature, doesn't it? Perhaps it's getting
inadvertently enabled somehow.

Hey guys... I think your assumptions are a bit "rude"... granted.. Vic might not know the value of what he's offering for sale.. but to assume that he's trying to "rip" someone off is unfair... rather than posting a negative comment... why not just be informative and tell Vic what the station is worth at todays fair market prices..

For all we know.. Vic's not a ham and the estate was his fathers...

When in doubt.. how about erring on the side of human kindness...

> cost less and have more features ?

It all depends on what your "needs" are. These radios were designed for the public safety market. They were designed for police and government users who need a high-spec, rugged, reliable radio with a certain set of features.

While the feds or a large police department need over-the-air-rekeying, encryption and MDC1200 digital signaling, you may not. These public safety users require a radio to work well in a high-RF environment such as found in big cities --you may or may not have similar requirements. These radios are not capable of dual band operation or multiple band receive operation. They are not capable of front panel direct frequency entry. They generally will fair much better when dropped and take much more punishment than an "amateur radio" ever would. They are available in submersible styles that would allow you to dunk the radio in water, leave it for some time, pull it out and never miss a beat.

You can purchase the radio service software (RSS) and programming hardware and program the radio yourself. These items are farily costly, so if you are not doing this frequently, you may want to have someone else program the radio for you.

: > TNC, BNC, and N. I doubt you'll find an adaptor from SMA to PL259 anywhere
: > though.

: You won't find a SMA=>PL259, but you can do the SMA->BNC, and then BNC=>PL259
: combo. Considering the weight of stacking adapters, you may want to put a
: length of good quality, flexible BNC (RG-58) in between the SMA/BNC adapter
: and the BNC/PL259.

: As for where to find the adapter, I checked 3 different radio shacks and none
: carried the adapter. Your best bet is to call Ham Radio Outlet, or any of
: the companies advertising in the back of QST. I got mine for $3.00 including
: shipping, and it only took 4 days to get here. Unfortunately I can't
: remember where I got it from at the moment.

: Once you get the antenna connection going, I think you'll be pleased. I've
: carried on a QSO 50 miles from a repeater with my G71 hooked to a MFJ-1729
: magmount.
: 73 - KF4UTT

They not be the cheapest, but Yaesu sells a SMA-BNC adaptor for their
models that have a SMA connector(for example, the FT-50R).

6258. HELP: TM733E Lost power on 144/145Mhz! PA gone?

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-31 00:00:00 UTC
From: John@datasafe.demon.co.uk
Message-ID: <35211ad6.3171103@news.demon.co.uk>
Source record: 148610

Hi and thanks for reading this,

I have lost power output on my Kenwood TM733E. Regardless of power selection I can only manage a few milliwatts out. I believe this could be the drive RF to the main PA transistors which have probably gone up the shoot!!

70cms works fine with full power output.

DO you have any experience of this rig and how easy/ how much the 2 metre PA transistors are to fit and buy.

Regards

John

Ham Radio Outlet sells SMA->BNC packaged by Yaesu that are well built.
A local electronics supplier has SMA->UHFs, all combinations of gender.
I tried to get a bulk order in to sell 'em at hamfests, but they'd only
give me a few cents off for qty 100 orders.

```
------------------------------------------------------------
FORSALE -- TINSLEY LABS CLASSICAL CASSEGRAIN TELESCOPE !!!
------------------------------------------------------------

I have for sale a Tinsley Labs 8-inch Classical Cassegrain
telescope, complete with the original German equitorial
mount and clock drive. Tinsley produced these fine scopes
in the mid 1960s and are known for their fine optical and
mechanical properties. They were (are) research quality
instruments which are quite rare and retain their value.

In mint shape, they go for around $3000. The one that
I have is in very good condition, but needs a few minor
items to bring it to "mint", as follows:

- mirrors are excellent, no scratches or chips, and
bright. Although very good and workable, a
recoating would make them mint.

- clock drive needs an external 12V battery pack and
rheostat to make it operational (this is as it was
intended). A nicad pack or motorcycle battery would
be appropriate.

- A low tripod or pedestal base (about 20" high) and
"rocker box" is needed for the equitorial mount to
sit on.

- the optical tube has some scratches in the paint and
a small dent, which absolutely does NOT interfere with
the optical path. Paint scheme is the original Tinsley
gray.

Thats about it. I just don't have the time to use this
scope and it's too valuable to just let it lay idle.

I was asking $2150 but am open to offers.

The equipment is located in Monmouth County, NJ. For
further information, please contact me.

Thanks,

Joe Levantino

> KK4BH

Sorry to say, but 706 is just a CB radio with some additional bands.
It has the dinamic range which is compartible with home made UW3DI...
I have sold a few dozens of them and when people looked on what they
bought - they are really disapointed. But ship has already left...

The great demand on this model just prove that HAM radio and general IQ
level go from bad to worse...

> wa6khh@qsl.net

Hi Dave,
I was in HRO last weekend and they said that most of the changes were software and that Kenwood would have an upgrade kit out for the earlier models. They said it should be available in a couple of weeks but did not have a price.

Changes include adjustable steps when using NR1, NR2 dsp modes and 2 beat cancel modes. There are also new filter ranges for the cw/data modes.

Hi all!
I am thinking of buying one of these little buties and was wondering what the mods possible to them are.
I would prefere being able to transmit on 55 MHz for work reasons is this possible?
If people could e-mail me directly it would be appreciated.
Cheers
ERIC

6267. FT-847 CAT and tuning glitches

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-31 00:00:00 UTC
From: rayd-nospam@en.com
Message-ID: <6frh78$36u$1@antares.en.com>
Source record: 148619

UPS dropped off a Yaesu FT-847 on my doorstep yesterday. So far, I've discovered two irritating items:

1) There is no opcode in the CAT system to retrieve the VFO frequencies! Also no provision to query the mode, memory contents, etc. This is a serious drawback. How could this rig be used for logging or contesting (as the manual boasts) if there is no provision for getting info from the radio? I sincerely hope it is only an oversight in the documentation.

2) In SSB and FM modes, the MEM/VFO "channelized" tuning control will tune double the frequency step set in menus #3 and #5. In other words, if you set the FM channel step to 5kHz, you get 10... 10kHz you get 20. Grrrr.

I'm planning on creating an FT-847 Web Home page in the near future. I hope it will become a clearinghouse for all issues with this rig.

I have a Motorola Saber HT and need some feedback as to what would be the best way to get it programmed (outside of paying a shop $35.00 each time). I wonder what most of you guys that own Motorola do to get it programmed. Does anyone know of a good place on the web to find documentation on Motorola HT's? Please respond to:

conklin@rtp.ericsson.se

6276. Help needed fixing HP8660B synthesizer

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-31 00:00:00 UTC
From: dgf@netcom.com
Message-ID: <dgfEqpBpC.BD6@netcom.com>
Source record: 148628

I have a HP8660B synthesizer that started malfunctioning when I put it back in service after about a year of being out of use.

The output, rather than being a single carrier, appears to be exactly 40 MHz wide, consisting of a carrier that's sweeping through the range. The spread-out signal centers around the desired frequency and is tunable by input to the synthesizer keyboard or controls.

I have the maintenance manual and decent test equipment (for this application) so I think I could make lots of progress if I could get some e-mail advice from someone that's worked on these before.

Thanks very much,

73 Dave WB0GAZ dgf@netcom.com

Source record: 148635

I bought a CES Personal Patch (410) and am trying to connect it with a yeasu FT-5100.
I don't know where to find the discriminator audio or the carrier detect logic (COR) signal. I am not a technician but I am somewhat competent with electronics, but the inside of this radio looks daunting. I called yeasu and it took him forever to understand what I wanted and even then I don't think he really did and then it became to technical for me. I called CES and they told me to take my radio in and have a technician find the appropriate output. That seems a bit overkill and expensive.
Has anyone connected this patch or a similar (he said the 4700vp has the same hookup) one to a ft5100 (or maybe 5200) or can provide some help on where to find the output
that I need?
Thanks a lot!

AOR AR-8000DX with continous coverage and DX mod by Javiation. The modification is carried out by installing a custom-built PCB into a standard AR8000. This will allow switching between the standard AM/NFM filter (approx. 12kHz bandwidth) and the narrower SSB filter (approx. 4kHz bandwidth); for more details see Javiation's Web page at www.javiation.co.uk

The unit is new in box and includes all the factory accessories as supplied by Javiation.

$ 600 includes UPS shipping. Contact johnl@ptd.net Thanks.

To follow-up, I discovered that when the 'FAST' button is enabled, it affects
not only the main, sub-band and MHz tuning, but also the "channelization" of
the VFOs. I guess this is an undocumented feature... although it doesn't
modify AM stepping. Weird. Well, wanted to clear Yaesu's name on that one.
:) However, the CAT issue remains.

6289. The IC-211 Tell me what you think!

6295. IC-706 Question

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-31 00:00:00 UTC
From: jpoulin@honk.org
Message-ID: <6fsa63$t7u$1@nnrp1.dejanews.com>
Source record: 148647

I have purchased an IC-706 radio about 2 months ago. However
there is something I don't like.

When I set my channels, and I want to go from say, channel
4 to channel 56, I have to sit and hold the up or down button
to get there. This is very slow and annoying.

Is there something I'm missing here, or is this just the way the
radio was built ?

There must be a faster way to get from one channel to another.

Any help would be greatly appreciated.

6296. DJ580 battery replacement.

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-31 00:00:00 UTC
From: Walter R Francis <wally@pop.uky.edu>
Message-ID: <1108.394T160T11470496@pop.uky.edu>
Source record: 148648

Note: Please respond by email, I don't receive this newsgroup!

I have DJ580 that I hadn't used for a while, and when I attempted to charge my two batteries the original Alinco battery seemed to charge and a W&W Associates battery would not charge at *all*, instantly says the battery is low.

I've found two prices on DJ580 batteries, one was $112 for a 7.2V 1.2A battery and one was a $65 for a 12V 800mA battery.

Sounds pretty expensive, and I really just want a compact battery, 7.2v 700ish mA is fine.

Where can I find a better price on such a battery?

Thanks!

Again, please respond by EMail. Thanks!

Thanks for taking the time to respond John.
I checked with Den-tronics.. selling them for 189 + shipping
...BUT.. he does not have any.

The only bad comments I have received relate to mic-audio... one fix would seem to be replacing the existing element with one of Radio Shack's Electret elements (a $2.99 item.. can't imagine what ADI has in there that would perform less adequately then a 3 dollar RS element)

Thanks again John

Hi,

In order to get my HF license as well as listen to everyone on the air with the

my new HB rig, I need to learn code.
To do so, I need the ARRL CD set titled "Your Introduction to Morse Code".

Is anyone on the list ready to part with theirs.

Yes I know about various software but I want something I can throw in my
portable cd player so
I can work on my code without having to bring my computer home everyday...

Thanks

>rig... I know I made the mistake of buying one... 73 de Jordan ...

JOKE RIG! Hmmm? I guess that's the reason it's one of the hottest selling rigs on the market. I read these newsgroups everyday. Why then, do you hardly ever see one posted for sale? Now mind you, I am refering to the 706MKII. I cannot relate to the 706, since I never owned one. Over the past 20 years I've had the priveledge of owning a FT-101, TS-520, TS-530 and TS-440. Quite frankly, this "little baby" does a pretty good job of performing, once you learn how to use it. True, it's not a high-end radio, but for the money where are you going to find anything with its features?

Source record: 148676

Yes.

While 'I haven't done this myself' it can be done and it works well.
Remember to change the tuning step accordingly, and set the FRS freqs into
memory.

The DJ-S41 doesn't qualify for FCC acceptance for the FRS mainly because it
has a VFO. This is why Yaesu, Alinco & others market units strikingly
similar to the ham versions of their flea-power HTs for the FRS band.

Happy tweaking, and please don't transmit where you aren't licensed!

Warren Tang wrote in message <6fotcj$c3$1@owl.slip.net>...

6311. Need info: 915-928MHz Tx with 3mW output

Newsgroup: rec.radio.amateur.equipment
Date: 1998-03-31 00:00:00 UTC
From: ngh1@topaz.cqu.edu.au
Message-ID: <6fplll$n7k$9@janus.cqu.edu.au>
Source record: 148677

Hello everyone,

I would like to transmit a video signal from my remote robot's CCD colour video camera to my PC. Therefore, I need a video transmitter and receiver operating at the frequency range of 915 to 928MHz. The maximum EIRP has to be 3mW or less and line-of-sight transmission. I might use two video transmitters and receivers due to its low RF (3mW) output set by Radiocommunication Class License or ACA. I will install one video transmitter at the courtyard and another one at the foreyard. They will work like the cellular network.

The robot controls signal transmission will use the similar concepts explained above and I guess Wireless Radio Modem will do the job.

So, my question is whether I need to build one by myself or I can purchase any of those video transmitter and receiver that operating at 3mW? What soft of antenna I need to use?

Please let me know if you have some information regarding to this transmitter/receiver such as where can I purchase and the costs. For your info, I am staying in Australia.

Thanks.

If you use in on the window of one of the newer cars which has factory tinted windows, you will find a degradation of signal. GM uses something in the glass which does not play well with the antenna.

We have written a Toroid software package for use DC to 300 MHz. Many Years of research has gone into error corrections for the low perm cores , 200 & 360 degree coverage as well as SRF for series and shunt coils. Much of this has come about as a request from Micrometals. The pin point accuracy allows us to add a custom core feature for custom shaped cores, stacking cores side by side and machining custom phenolic cores from plastic, teflon, wood, ect...
Down load a demo or just view the software main screen at our web

>
>73,

Charging 350.00 for something that should come with the radio, and is required to use the radio to it's fullest potential is STEALING...using a piece of software for evaluation or personal one radio use is part of everyday life....

Once I ordered a piece of software which would link a automobile diagnostic tool to a PC. Allowing you to use the PC to access the autodiagnostic routines...Price 199.00 payable up front....Stupid on my part, But I paid anyway... What I got was a 15.00 VT100 Emulator program...I was not impressed.. And my ass was burning from the royal screwing that I got.... I threw the Program away and started using PcAnywhere which actually worked properly..

From: drgrant@ziplink.net
Message-ID: <35259a0c.24295995@news.newsguy.com>
Source record: 148690

I have an alinco DJ-580 HT for sale. I'd rate it 8 on
a scale of 10- not like new but i'd say the rig is in very good
condition functionally, works great. cap/mars/cell mods done.
Includes 12V and 7.2V alinco batteries, wall charger, standard
duck antenna (that came with the rig) and a larsen kulduckie
dualband antenna, and owners manual.

All for $250 shipped Continental US.

Reason For Selling: I'm all HT'ed to death, I own a DJ-582 and an
FT-530....as well as a couple of monoband 440 jobbers. No real need
for a spare dualband. Hate like hell to get rid of it, but I need the
money.

Radio Shack. Yeah, no fooling, Radio Shack carries adaptors from SMA to
TNC, BNC, and N. I doubt you'll find an adaptor from SMA to PL259 anywhere
though.

You won't find a SMA=>PL259, but you can do the SMA->BNC, and then BNC=>PL259 combo. Considering the weight of stacking adapters, you may want to put a length of good quality, flexible BNC (RG-58) in between the SMA/BNC adapter and the BNC/PL259.

As for where to find the adapter, I checked 3 different radio shacks and none carried the adapter. Your best bet is to call Ham Radio Outlet, or any of the companies advertising in the back of QST. I got mine for $3.00 including shipping, and it only took 4 days to get here. Unfortunately I can't remember where I got it from at the moment.

Once you get the antenna connection going, I think you'll be pleased. I've carried on a QSO 50 miles from a repeater with my G71 hooked to a MFJ-1729 magmount.

Your best bet is to make a short cable with an SMA on one end and a BNC or
PL-259 on the other. I'd be *very* leery of using an adapter on the SMA
connector of one of the munchkin radios. The weight of the adapter and thick
coax is bound to cause the SMA to break free or wiggle it enough to open
the connection from the center pin to the board.

Valor/Proam makes a good one. I have their dual band version.
Larsen also makes a very good one (more $$). The Radio Shack
antenna is most likely made by Valor.

I called Valor about making a triband version (6/2/440). Their
engineer thought the owners did not think 6m was worth the effort
to date. He also said that the newer cars will have a window
tint that will make glass mounted antennas not work. This will
effect celtels as well.
